PREFACE

In this age, when one has the wealth of the past to draw from as well as the tremendous output of present-day writers, the problem of selecting essays is not so much that of choosing the best as that of putting aside the equally good. Despite the vast amount of material to tempt the compiler, a collection of essays chosen by one man necessarily represents his personal judgment and, to a certain extent, his individual interests. *Adventures in Essay Reading* cannot, however, claim that element of unity. Instead, it reflects in a composite way the judgments and interests of a large staff of instructors. Each member of the Department of Rhetoric of the University of Michigan was asked to place in the hands of a committee a list of the ten essays he would select for his first-year students. Naturally the total list was long and varied. The essays most frequently mentioned were given first consideration by the committee of editors, but inability in many cases to secure the reprinting privilege from authors and owners of copyrights made it impossible to include all the favorites.

Some of the essays in this volume deal directly with matters pertaining to college life; others by their controversial character are bound to challenge thought; still others concern themselves with subjects which may throw light on classroom problems.

The dominant questions in the mind of each instructor as he made his selections were probably: Will this essay appeal to college students? Will it prompt them to read more from the same author? Will it give them a taste

13474

of the joy of thinking? One may assume that the idea of selecting pieces which would serve as models for writing was present, but incidentally. The general purpose was to prove to college students the readableness of the essay as a literary form. Authors and publishers have recognized this motive and have been generous in allowing the inclusion of modern copyrighted material.

Actual use by students is the best test of a book designed for them. Such a test, conducted last year, has caused a revision of *Adventures in Essay Reading*. The changes are the result of suggestions from instructors who used the book in class. In the revised edition brief sketches of the authors have been included. These sketches are not intended as complete biographies or as critical estimates, but as informal introductions presented to give the reader a sense of acquaintanceship with the authors.

If college students find in *Adventures in Essay Reading* enjoyment that will encourage further excursions into one of the most delightful fields of literature, those who have made this volume will feel well repaid.

OF STUDIES[1]

Francis Bacon

Francis Bacon, statesman, man of law, philosopher, literary artist, and, more than is commonly thought, wit, was born in London, 1561, and died there in 1626. He was, therefore, contemporary with Spenser, Cervantes, Montaigne, and Shakespeare. He was a great scholar for the Elizabethan age, though that was an age when there was still so little advance in specialization that a man could, as Bacon said he purposed to do, take all knowledge for his province. Bacon was not far ahead of his day in any field of thought excepting science. He was not the inventor of induction, though he did much toward reforming the methods of scientific investigation from the compilation of alleged facts into testing facts by experiment. Outside the field of science, many another man in that time, as Shakespeare, for example, could have written much that came from the pen of Bacon. Yet, like all eminent scientists, Bacon reveals his personality in his writing. The function of the artist was defined by Bacon to be the adding of man to nature, and he added himself to the material with which he dealt. Bacon was a great speaker and a great writer. His style is grave and temperate, yet it gives the impression of suppressing ardent emotion over the object of his thought. The movement of his sentences is slow, but with a rich, deep music audible to the inner ear of the reader. Bacon's chief works for the English student are *The Advancement of Learning, The History of Henry VII, The New Atlantis,* and the *Essays.* The *Essays* are the least fine in diction, in imagination, and in eloquence, of his writings, but they give the same sense as do his other works of the importance of knowledge, of the unity of all knowledge, and of the value of organizing all knowledge to practical ends.

Studies serve for pastimes, for ornaments, and for abilities. Their chief use for pastime is in privateness and retiring; for ornament is in discourse, and for ability is in judgment. For expert men can execute, but learned men are fittest to judge or censure.

To spend too much time in them is sloth; to use them

[1] First published in 1597.

too much for ornament is affectation; to make judgment wholly by their rules is the humor of a scholar.

They perfect nature, and are perfected by experience.

Crafty men contemn them, simple men admire them, wise men use them, for they teach not their own use, but that there is a wisdom without them and above them, won by observation.

Read not to contradict, nor to believe, but to weigh and consider.

Some books are to be tasted, others to be swallowed, and some few to be chewed and digested; that is, some books are to be read only in parts; others to be read but cursorily, and some few to be read wholly, and with diligence and attention.

Reading maketh a full man, conference a ready man, and writing an exact man. And therefore if a man write little, he had need have a great memory; if he confer little, he had need have a present wit; and if he read little, he had need have much cunning, to seem to know that he doth not.

Histories make men wise, poets witty, the mathematics subtle, natural philosophy deep, moral grave, logic and rhetoric able to contend.

OF TRUTH[1]

Francis Bacon

What is truth? said jesting Pilate, and would not stay for an answer. Certainly there be that delight in giddiness, and count it a bondage to fix a belief, affecting free-will in thinking, as well as in acting. And though the sects of philosophers of that kind be gone, yet there remain certain discoursing wits which are of the same veins, though there be not so much blood in them as was in those of the ancients. But it is not only the difficulty and labor which men take in finding out of truth, nor again that when it is found it imposeth upon men's thoughts, that doth bring lies in favor, but a natural though corrupt love of the lie itself. One of the later school of the Grecians examineth the matter, and is at a stand to think what should be in it, that men should love lies, where neither they make for pleasure, as with poets, nor for advantages, as with the merchant, but for the lie's sake. But I cannot tell. This same truth is a naked and open day-light, that doth not shew the masques and mummeries and triumphs of the world half so stately and daintily as candle-lights. Truth may perhaps come to the price of a pearl, that sheweth best by day; but it will not rise to the price of a diamond or carbuncle, that sheweth best in varied lights. A mixture of a lie doth ever add pleasure. Doth any man doubt that if there were taken out of men's minds vain opinions, flattering hopes, false valuations, imaginations as one would, and

[1] First published in 1625.

the like, but it would leave the minds of a number of men poor shrunken things, full of melancholy and indisposition, and unpleasing to themselves? One of the Fathers, in great severity, called poesy *vinum dæmonum*, because it filleth the imagination; and yet it is but with the shadow of a lie. But it is not the lie that passeth through the mind, but the lie that sinketh in and settleth in it that doth the hurt such as we spake of before. But howsoever these things are thus in men's depraved judgments and affections, yet truth, which only doth judge itself, teacheth that the inquiry of truth, which is the love-making or wooing of it, the knowledge of truth, which is the presence of it, and the belief of truth, which is the enjoying of it, is the sovereign good of human nature. The first creature of God, in the works of the days, was the light of the sense; the last was the light of reason; and his sabbath work ever since is the illumination of his Spirit. First he breathed light upon the face of the matter or chaos; then he breathed light into the face of man; and still he breatheth and inspireth light into the face of his chosen. The poet that beautified the sect that was otherwise inferior to the rest saith yet excellently well: "It is a pleasure to stand upon the shore, and to see ships tossed upon the sea; a pleasure to stand in the window of a castle, and to see a battle and the adventures thereof below; but no pleasure is comparable to the standing upon the vantage ground of Truth (a hill not to be commanded, and where the air is always clear and serene) and to see the errors, and wanderings, and mists, and tempests, in the vale below"; so always that this prospect be with pity, and not with swelling or pride. Certainly, it is heaven upon earth to have a man's mind move in charity, rest in providence, and turn upon the poles of truth.

To pass from theological and philosophical truth to the truth of civil business, it will be acknowledged, even by those that practise it not, that clear and round dealing is the honor of man's nature; and that mixture of falsehood is like alloy in coin of gold and silver, which may make the metal work the better, but it embaseth it. For these winding and crooked courses are the goings of the serpent, which goeth basely upon the belly, and not upon the feet. There is no vice that doth so cover a man with shame as to be found false and perfidious. And therefore Montaigne saith prettily, when he inquired the reason why the word of the lie should be such a disgrace and such an odious charge? Saith he, "If it be well weighed, to say that a man lieth is as much to say as that he is brave towards God and a coward towards men." For a lie faces God, and shrinks from man. Surely the wickedness of falsehood and breach of faith cannot possibly be so highly expressed as in that it shall be the last peal to call the judgments of God upon the generations of men, it being foretold, that when Christ cometh, "He shall not find faith upon the earth."

ON GOING A JOURNEY[1]

William Hazlitt

William Hazlitt was born at Maidstone, Kent, 1778, and died in 1830. He was a gloomy, quarrelsome character. DeQuincey, who, however, seldom praised any one, said of him that he "smiled upon no man, nor exchanged tokens of fame with the nearest of fraternities." Hazlitt's education was deficient and his literary training meager. His first bid for fame was a dull book entitled *On the Principles of Human Action.* He was not a philosopher, nor an original thinker of any sort. In the strictest sense, he was a "man of letters," one who, compelled by circumstances, wrote for bread, not one who was impelled to expression by an inner necessity. He became an essayist, a critic, commenting upon the works and ways of other men, the most difficult of things in literature to do well. In addition to the philosophic attempt mentioned above, his only contribution to literature apart from essays and criticism was a *Life of Napoleon,* which displays a most sympathetic interest in the career of the Emperor of the French. "Miscellaneous comment" perhaps sums up the nature of nearly all his work. The best of it was upon the English drama, though his critical estimates of authors and public men among his contemporaries still bear the stamp of coming from an eyewitness of their activities. Nearly all of his writings appeared first in newspapers, magazines, and reviews. He was an able contributor, a sort of glorified journalist. His skill was workmanlike, though it frequently revealed his petulant temperament. What he wrote held the attention of his time, amused, and even instructed. His style was sparkling, sometimes shrill, usually incisive, occasionally brilliant; perhaps it would now be called showy. Charles Lamb said of Hazlitt, "I should belie my own conscience if I said less than that I think W. H. to be, in his natural and healthy state, one of the wisest and finest spirits living. . . . I think I shall go to my grave without finding, or expecting to find, such another companion."

One of the pleasantest things in the world is going a journey; but I like to go by myself. I can enjoy society in a room; but out of doors nature is company enough for me I am then never less alone than when alone.

[1] First published in the *New Monthly Magazine,* London, 1822.

"The fields his study, nature was his book."

I cannot see the wit of walking and talking at the same time. When I am in the country, I wish to vegetate like the country. I am not for criticizing hedge-rows and black cattle. I go out of town in order to forget the town and all that is in it. There are those who for this purpose go to watering-places, and carry the metropolis with them. I like more elbow-room and fewer incumbrances. I like solitude, when I give myself up to it, for the sake of solitude; nor do I ask for

> "—— a friend in my retreat,
> Whom I may whisper, solitude is sweet."

The soul of a journey is liberty, perfect liberty, to think, feel, do, just as one pleases. We go a journey chiefly to be free of all impediments and of all inconveniences; to leave ourselves behind, much more to get rid of others. It is because I want a little breathing-space to muse on indifferent matters, where Contemplation

> "May plume her feathers and let grow her wings,
> That in the various bustle of resort
> Were all too ruffled, and sometimes impair'd,"

that I absent myself from the town for a while, without feeling at a loss the moment I am left by myself. Instead of a friend in a post-chaise or in a Tilbury to exchange good things with and vary the same stale topics over again, for once let me have a truce with impertinence. Give me the clear blue sky over my head and the green turf beneath my feet, a winding road before me, and a three hours' march to dinner—and then to thinking! It is hard if I cannot start some game on these lone heaths.

I laugh, I run, I leap, I sing for joy. From the point of yonder rolling cloud I plunge into my past being, and revel there, as the sun-burnt Indian plunges headlong into the wave that wafts him to his native shore. Then long-forgotten things, like "sunken wrack and sumless treasuries," burst upon my eager sight, and I begin to feel, think, and be myself again. Instead of an awkward silence, broken by attempts at wit or dull commonplaces, mine is that undisturbed silence of the heart which alone is perfect eloquence. No one likes puns, alliterations, antitheses, argument, and analysis better than I do; but I sometimes had rather be without them. "Leave, oh, leave me to my repose!" I have just now other business in hand, which would seem idle to you, but is with me "very stuff o' the conscience." Is not this wild rose sweet without a comment? Does not this daisy leap to my heart set in its coat of emerald? Yet if I were to explain to you the circumstance that has so endeared it to me, you would only smile. Had I not better then keep it to myself, and let it serve me to brood over from here to yonder craggy point, and from thence onward to the far-distant horizon? I should be but bad company all that way, and therefore prefer being alone. I have heard it said that you may, when the moody fit comes on, walk or ride on by yourself and indulge your reveries. But this looks like a breach of manners, a neglect of others, and you are thinking all the time that you ought to rejoin your party. "Out upon such half-faced fellowship," say I. I like to be either entirely to myself, or entirely at the disposal of others; to talk or be silent, to walk or sit still, to be sociable or solitary. I was pleased with an observation of Mr. Cobbett's that he thought it "a bad French custom to drink our wine with our meals, and that an Englishman ought to do only

one thing at a time." So I cannot talk and think, or indulge in melancholy musing and lively conversation by fits and starts. "Let me have a companion of my way," says Sterne, "were it but to remark how the shadows lengthen as the sun declines." It is beautifully said; but in my opinion, this continual comparing of notes interferes with the involuntary impression of things upon the mind, and hurts the sentiment. If you only hint what you feel in a kind of dumb show, it is insipid; if you have to explain it, it is making a toil of a pleasure. You cannot read the book of nature without being perpetually put to the trouble of translating it for the benefit of others.

I am for the synthetical method on a journey in preference to the analytical. I am content to lay in a stock of ideas then and to examine and anatomize them afterwards. I want to see my vague notions float like the down of the thistle before the breeze and not to have them entangled in the briars and thorns of controversy. For once, I like to have it all my own way; and this is impossible unless you are alone, or in such company as I do not covet. I have no objection to argue a point with any one for twenty miles of measured road, but not for pleasure. If you remark the scent of a bean-field crossing the road, perhaps your fellow-traveler has no smell. If you point to a distant object, perhaps he is short-sighted, and has to take out his glass to look at it. There is a feeling in the air, a tone in the color of a cloud which hits your fancy, but the effect of which you are unable to account for. There is then no sympathy, but an uneasy craving after it, and a dissatisfaction which pursues you on the way, and in the end probably produces ill-humor. Now I never quarrel with myself, and take all my own conclusions for granted till I find it necessary to defend them against objections. It is

not merely that you may not be of accord on the objects and circumstances that present themselves before you—these may recall a number of objects and lead to associations too delicate and refined to be possibly communicated to others. Yet these I love to cherish, and sometimes still fondly clutch them, when I can escape from the throng to do so. To give way to our feelings before company seems extravagance or affectation; and, on the other hand, to have to unravel this mystery of our being at every turn, and to make others take an equal interest in it (otherwise the end is not answered) is a task to which few are competent. We must "give it an understanding, but no tongue." My old friend Coleridge, however, could do both. He could go on in the most delightful explanatory way over hill and dale a summer's day and convert a landscape into a didactic poem or a Pindaric ode. "He talked far above singing." If I could so clothe my ideas in sounding and flowing words, I might perhaps wish to have some one with me to admire the swelling theme; or I could be more content were it possible for me still to hear his echoing voice in the woods of All-Foxden. They had "that fine madness in them which our first poets had"; and if they could have been caught by some rare instrument, would have breathed such strains as the following:

> "—— Here be woods as green
> As any, air likewise as fresh and sweet
> As when smooth Zephyrus plays on the fleet
> Face of the curled streams, with flow'rs as many
> As the young spring gives, and as choice as any;
> Here be all new delights, cool streams and wells;
> Arbors o'ergrown with woodbines, caves, and dells;
> Choose where thou wilt, while I sit by and sing,
> Or gather rushes, to make many a ring

For thy long fingers; tell thee tales of love;
How the pale Phœbe, hunting in a grove,
First saw the boy Endymion, from whose eyes
She took eternal fire that never dies;
How she convey'd him softly in a sleep,
His temples bound with poppy, to the steep
Head of old Latmos, where she stoops each night,
Gilding the mountain with her brother's light,
To kiss her sweetest."

Had I words and images at command like these, I would attempt to wake the thoughts that lie slumbering on golden ridges in the evening clouds; but at the sight of nature my fancy, poor as it is, droops and closes up its leaves, like flowers at sunset. I can make nothing out on the spot. I must have time to collect myself.

In general, a good thing spoils out-of-door prospects; it should be reserved for table-talk. Lamb is for this reason, I take it, the worst company in the world out of doors, because he is the best within. I grant there is one subject on which it is pleasant to talk on a journey, and that is, what one shall have for supper when we get to our inn at night. The open air improves this sort of conversation or friendly altercation by setting a keener edge on appetite. Every mile of the road heightens the flavor of the viands we expect at the end of it. How fine it is to enter some old town, walled and turreted, just at the approach of nightfall, or to come to some straggling village, with the lights streaming through the surrounding gloom; and then, after inquiring for the best entertainment that the place affords, to "take one's ease at one's inn!" These eventful moments in our lives' history are too precious, too full of solid, heartfelt happiness to be frittered and dribbled away in imperfect sympathy. I would have them all to myself, and drain

them to the last drop; they will do to talk of, or to write about afterwards. What a delicate speculation it is, after drinking whole goblets of tea,

"The cups that cheer, but not inebriate,"

and letting the fumes ascend into the brain, to sit considering what we shall have for supper: eggs and a rasher, a rabbit smothered in onions, or an excellent veal cutlet! Sancho in such a situation once fixed upon cow-heel; and his choice, though he could not help it, is not to be disparaged. Then in the intervals of pictured scenery and Shandean contemplation to catch the preparation and the stir in the kitchen. *Procul, O procul este profani!* These hours are sacred to silence and to musing, to be treasured up in the memory, and to feed the source of smiling thoughts hereafter. I would not waste them in idle talk; or if I must have the integrity of fancy broken in upon, I would rather it were by a stranger than a friend.

A stranger takes his hue and character from the time and place; he is a part of the furniture and costume of an inn. If he is a Quaker, or from the West Riding of Yorkshire, so much the better. I do not even try to sympathize with him, and he breaks no squares. I associate nothing with my traveling companion but present objects and passing events. In his ignorance of me and my affairs, I in a manner forget myself. But a friend reminds one of other things, rips up old grievances, and destroys the abstraction of the scene. He comes in ungraciously between us and our imaginary character. Something is dropped in the course of conversation that gives a hint of your profession and pursuits; or from having some one with you that knows the less sublime portions of your history, it seems that

other people do. You are no longer a citizen of the world; but your "unhoused free condition is put into circumscription and confine." The incognito of an inn is one of its striking privileges: "lord of one's self, uncumbered with a name." Oh! it is great to shake off the trammels of the world and of public opinion, to lose our importunate, tormenting, everlasting personal identity in the elements of nature, and become the creature of the moment, clear of all ties, to hold to the universe only by a dish of sweetbreads, and to owe nothing but the score of the evening, and, no longer seeking for applause and meeting with contempt, to be known by no other title than *the Gentleman in the parlor!* One may take one's choice of all characters in this romantic state of uncertainty as to one's real pretensions and become indefinitely respectable and negatively right-worshipful. We baffle prejudice and disappoint conjecture; and, from being so to others, begin to be objects of curiosity and wonder even to ourselves. We are no more those hackneyed commonplaces that we appear in the world; an inn restores us to the level of nature, and quits scores with society!

I have certainly spent some enviable hours at inns; sometimes when I have been left entirely to myself, and have tried to solve some metaphysical problem, as once at Witham Common, where I found out the proof that likeness is not a case of the association of ideas; at other times when there have been pictures in the room, as at St. Neot's (I think it was), where I first met with Gribelin's engravings of the Cartoons, into which I entered at once, and at a little inn on the border of Wales, where there happened to be hanging some of Westall's drawings, which I compared triumphantly (for a theory that I had, not for the admired artist) with the figure

of a girl who had ferried me over the Severn, standing up in a boat between me and the twilight; at other times I might mention luxuriating in books, with a peculiar interest in this way, as I remember sitting up half the night to read *Paul and Virginia,* which I picked up at an inn at Bridgewater, after being drenched in the rain all day, and at the same place I got through two volumes of Madame D'Arblay's *Camilla.* It was on the 10th of April, 1798, that I sat down to a volume of the *New Eloise* at the inn at Llangollen, over a bottle of sherry and a cold chicken. The letter I chose was that in which St. Preux describes his feelings as he first caught a glimpse from the heights of the Jura of the Pays de Vaud, which I had brought with me as a *bon bouche* to crown the evening with. It was my birthday, and I had for the first time come from a place in the neighborhood to visit this delightful spot. The road to Llangollen turns off between Chirk and Wrexham; and on passing a certain point, you come all at once upon the valley, which opens like an amphitheater, broad, barren hills rising in majestic state on either side, with "green upland swells that echo to the bleat of flocks" below and the river Dee babbling over its stony bed in the midst of them. The valley at this time "glittered green with sunny showers," and a budding ash-tree dipped its tender branches in the chiding stream. How proud, how glad I was to walk along the high road that overlooks the delicious prospect, repeating the lines which I have just quoted from Mr. Coleridge's poems! But besides the prospect which opened beneath my feet, another also opened to my inward sight, a heavenly vision, on which were written, in letters large as Hope could make them, these four words, LIBERTY, GENIUS, LOVE, VIRTUE,

which have since faded into the light of common day, or mock my idle gaze.

"The beautiful is vanished, and returns not."

Still I would return some time or other to this enchanted spot; but I would return to it alone. What other self could I find to share that influx of thoughts, of regret, and delight, the fragments of which I could hardly conjure up to myself, so much have they been broken and defaced! I could stand on some tall rock and overlook the precipice of years that separates me from what I then was. I was at that time going shortly to visit the poet whom I have above named. Where is he now? Not only I myself have changed; the world, which was then new to me, has become old and incorrigible. Yet will I turn to thee in thought, O sylvan Dee, in joy, in youth and gladness as thou then wert; and thou shalt always be to me the river of Paradise, where I will drink of the waters of life freely!

There is hardly anything that shows the short-sightedness or capriciousness of the imagination more than traveling does. With change of place we change our ideas; nay, our opinions and feelings. We can by an effort indeed transport ourselves to old and long-forgotten scenes, and then the picture of the mind revives again; but we forget those that we have just left. It seems that we can think but of one place at a time. The canvas of the fancy is but of a certain extent, and if we paint one set of objects upon it, they immediately efface every other. We cannot enlarge our conceptions; we only shift our point of view. The landscape bares its bosom to the enraptured eye; we take our fill of it, and seem as if we could form no other image of beauty or

grandeur. We pass on, and think no more of it; the horizon that shuts it from our sight also blots it from our memory like a dream. In traveling through a wild, barren country I can form no idea of a woody and cultivated one. It appears to me that all the world must be barren, like what I see of it. In the country we forget the town, and in town we despise the country. "Beyond Hyde Park," says Sir Fopling Flutter, "all is a desert." All that part of the map that we do not see before us is blank. The world in our conceit of it is not much bigger than a nutshell. It is not one prospect expanded into another, county joined to county, kingdom to kingdom, lands to seas, making an image voluminous and vast; the mind can form no larger idea of space than the eye can take in at a single glance. The rest is a name written in a map, a calculation of arithmetic. For instance, what is the true signification of that immense mass of territory and population known by the name of China to us? An inch of pasteboard on a wooden globe, of no more account than a China orange! Things near us are seen of the size of life; things at a distance are diminished to the size of the understanding. We measure the universe by ourselves, and even comprehend the texture of our own being only piecemeal. In this way, however, we remember an infinity of things and places. The mind is like a mechanical instrument that plays a great variety of tunes, but it must play them in succession. One idea recalls another, but it at the same time excludes all others. In trying to renew old recollections we cannot, as it were, unfold the whole web of our existence; we must pick out the single threads. So in coming to a place where we have formerly lived, and with which we have intimate associations, every one must have found that the feeling grows more vivid the nearer we ap-

proach the spot, from the mere anticipation of the actual impression; we remember circumstances, feelings, persons, faces, names that we had not thought of for years; but for the time all the rest of the world is forgotten!—To return to the question I have quitted above.

I have no objection to go to see ruins, aqueducts, pictures, in company with a friend or a party, but rather the contrary, for the former reason reversed. They are intelligible matters and will bear talking about. The sentiment here is not tacit, but communicable and overt. Salisbury Plain is barren of criticism, but Stonehenge will bear a discussion antiquarian, picturesque, and philosophical. In setting out on a party of pleasure, the first consideration always is where we shall go to; in taking a solitary ramble, the question is what we shall meet with by the way. "The mind is its own place"; nor are we anxious to arrive at the end of our journey. I can myself do the honors indifferently well to works of art and curiosity. I once took a party to Oxford with no mean *éclat,* showed them that seat of the Muses at a distance,

"With glistering spires and pinnacles adorn'd—"

descanted on the learned air that breathes from the grassy quadrangles and stone walls of halls and cottages, was at home in the Bodleian, and at Blenheim quite superseded the powdered cicerone that attended us and that pointed in vain with his wand to commonplace beauties in matchless pictures. As another exception to the above reasoning, I should not feel confident in venturing on a journey in a foreign country without a companion. I should want at intervals to hear the sound of my own language. There is an involuntary antipathy in the mind of an Englishman to foreign manners and notions that requires

the assistance of social sympathy to carry it off. As the distance from home increases, this relief, which was at first a luxury, becomes a passion and an appetite. A person would almost feel stifled to find himself in the deserts of Arabia without friends and countrymen; there must be allowed to be something in the view of Athens or old Rome that claims the utterance of speech; and I own that the Pyramids are too mighty for any single contemplation. In such situations, so opposite to all one's ordinary train of ideas, one seems a species by one's-self, a limb torn off from society, unless one can meet with instant fellowship and support. Yet I did not feel this want or craving very pressing once when I first set my foot on the laughing shores of France. Calais was peopled with novelty and delight. The confused, busy murmur of the place was like oil and wine poured into my ears; nor did the mariners' hymn, which was sung from the top of an old crazy vessel in the harbor as the sun went down, send an alien sound into my soul. I only breathed the air of general humanity. I walked over "the vine-covered hills and gay regions of France," erect and satisfied; for the image of man was not cast down and chained to the foot of arbitrary thrones. I was at no loss for language, for that of all the great schools of painting was open to me. The whole is vanished like a shade. Pictures, heroes, glory, freedom, all are fled; nothing remains but the Bourbons and the French people!

There is undoubtedly a sensation in traveling into foreign parts that is to be had nowhere else; but it is more pleasing at the time than lasting. It is too remote from our habitual associations to be a common topic of discourse or reference, and, like a dream or another state of existence, does not piece into our daily modes of life.

It is an animated but a momentary hallucination. It demands an effort to exchange our actual for our ideal identity; and to feel the pulse of our old transports revive very keenly, we must "jump" all our present comforts and connections. Our romantic and itinerant character is not to be domesticated. Dr. Johnson remarked how little foreign travel added to the facilities of conversation in those who had been abroad. In fact, the time we have spent there is both delightful, and, in one, sense, instructive; but it appears to be cut out of our substantial, downright existence, and never to join kindly on to it. We are not the same, but another, and perhaps more enviable individual, all the time we are out of our own country. We are lost to ourselves, as well as our friends. So the poet somewhat quaintly sings,

"Out of my country and myself I go."

Those who wish to forget painful thoughts do well to absent themselves for a while from the ties and objects that recall them; but we can be said only to fulfil our destiny in the place that gave us birth. I should on this account like well enough to spend the whole of my life in traveling abroad, if I could anywhere borrow another life to spend afterwards at home!

DREAM-CHILDREN: A REVERIE[1]

Charles Lamb

In London, between Fleet Street and the Thames, there is an irregular group of buildings called the Temple. Its name is derived from the site of the lodge of the crusading Knights Templars. In one of its humble back rooms in the year 1775 Charles Lamb was born. At the age of nine he was sent to Christ's Hospital (Blue-coat School), and it was here that he made the acquaintance of Coleridge which became a lifelong friendship. Before he was fifteen he left the school to enter the service of the South Sea House, which he left at the end of three years to become a clerk for the East India Company, in whose employ he remained for thirty-three years. At the end of that time he was retired on pension.

Lamb's first real success in literature was achieved in 1807, when he brought out his *Tales from Shakespeare,* written in collaboration with his sister Mary. In 1820 Lamb began to contribute to *The London Magazine* a series of essays, which he signed "Elia." It is from this collection that the two essays here are taken. His whimsical essays reflect the capricious manner and the engaging personality that endeared him to the literary circle of which Coleridge, Southey, and Wordsworth were members.

A terrible domestic tragedy clouded his life. In 1796 his sister Mary, during a fit of temporary insanity, stabbed their mother to death. Lamb undertook to become his afflicted sister's guardian and cared for her during the rest of his days. A touch of pathos is given in his reference to "Alice" in the essay *Dream-Children* by the knowledge of the brighter prospects in life which he gave up in order to watch over his afflicted sister. For delicacy of touch his familiar essays are scarcely matched in English literature.

Children love to listen to stories about their elders, when *they* were children; to stretch their imagination to the conception of a traditionary great-uncle or grandame, whom they never saw. It was in this spirit that my little ones crept about me the other evening to hear about

[1] First published in the *London Magazine,* January, 1822.

their great-grandmother Field, who lived in a great house in Norfolk (a hundred times bigger than that in which they and papa lived), which had been the scene —so at least it was generally believed in that part of the country—of the tragic incidents which they had lately become familiar with from the ballad of the Children in the Wood. Certain it is that the whole story of the children and their cruel uncle was to be seen fairly carved out in wood upon the chimney-piece of the great hall, the whole story down to the Robin Redbreasts, till a foolish rich person pulled it down to set up a marble one of modern invention in its stead, with no story upon it. Here Alice put out one of her dear mother's looks, too tender to be called upbraiding.

Then I went on to say how religious and how good their great-grandmother Field was, how beloved and respected by everybody, though she was not indeed the mistress of this great house, but had only the charge of it (and yet in some respects she might be said to be the mistress of it too) committed to her by the owner, who preferred living in a newer and more fashionable mansion which he had purchased somewhere in the adjoining county; but still she lived in it in a manner as if it had been her own, and kept up the dignity of the great house in a sort while she lived, which afterwards came to decay and was nearly pulled down, and all its old ornaments stripped and carried away to the owner's other house, where they were set up, and looked as awkward as if some one were to carry away the old tombs they had seen lately at the Abbey and stick them up in Lady C's tawdry gilt drawing-room. Here John smiled, as much as to say, "That would be foolish indeed." And then I told him, when she came to die, her funeral was attended by a concourse of all the poor, and some of the

gentry too, of the neighborhood for many miles round, to show their respect for her memory, because she had been such a good and religious woman; so good indeed that she knew all the Psaltery by heart, aye, and a great part of the Testament besides. Here little Alice spread her hands.

Then I told what a tall, upright, graceful person their great-grandmother Field once was; and how in her youth she was esteemed the best dancer—here Alice's little right foot played an involuntary movement, till upon my looking grave, it desisted—the best dancer, I was saying, in the county, till a cruel disease, called a cancer, came, and bowed her down with pain; but it could never bend her good spirits, or make them stoop, but they were still upright, because she was so good and religious. Then I told how she was used to sleep by herself in a lone chamber of the great lone house; and how she believed that an apparition of two infants was to be seen at midnight gliding up and down the great staircase near where she slept, but she said "those innocents would do her no harm"; and how frightened I used to be, though in those days I had my maid to sleep with me, because I was never half so good or religious as she—and yet I never saw the infants. Here John expanded all his eyebrows and tried to look courageous.

Then I told how good she was to all her grand-children, having us to the great house in the holidays, where I in particular used to spend many hours by myself in gazing upon the old busts of the Twelve Cæsars, that had been Emperors of Rome, till the old marble heads would seem to live again, or I to be turned into marble with them; how I never could be tired with roaming about that huge mansion with its vast empty rooms, with their worn-out hangings, fluttering tapestry, and carved oaken panels,

with the gilding almost rubbed out—sometimes in the spacious old-fashioned gardens, which I had almost to myself, unless when now and then a solitary gardening man would cross me—and how the nectarines and peaches hung upon the walls, without my ever offering to pluck them, because they were forbidden fruit, unless now and then,—and because I had more pleasure in strolling about among the old melancholy-looking yew trees, or the firs, and picking up the red berries, and the fir apples, which were good for nothing but to look at —or in lying about upon the fresh grass, with all the fine garden smells around me—or basking in the orangery, till I could almost fancy myself ripening too along with the oranges and the limes in that grateful warmth—or in watching the dace that darted to and fro in the fish-pond at the bottom of the garden, with here and there a great sulky pike hanging midway down the water in silent state, as if it mocked at their impertinent friskings. —I had more pleasure in these busy-idle diversions than in all the sweet flavors of peaches, nectarines, oranges, and such like common baits of children. Here John slily deposited back upon the plate a bunch of grapes, which, not unobserved by Alice, he had meditated dividing with her, and both seemed willing to relinquish them for the present as irrelevant.

Then in somewhat a more heightened tone, I told how, though their great-grandmother Field loved all her grand-children, yet in an especial manner she might be said to love their uncle, John L———, because he was so handsome and spirited a youth, and a king to the rest of us; and, instead of moping about in solitary corners, like some of us, he would mount the most mettlesome horse he could get, when but an imp no bigger than themselves, and make it carry him half over the county

in a morning, and join the hunters when there were any out—and yet he loved the old great house and gardens too, but had too much spirit to be always pent up within their boundaries—and how their uncle grew up to man's estate as brave as he was handsome, to the admiration of everybody, but of their great-grandmother Field most especially; and how he used to carry me upon his back when I was a lame-footed boy—for he was a good bit older than me—many a mile when I could not walk for pain; and how in after life he became lame-footed too, and I did not always (I fear) make allowances enough for him when he was impatient and in pain, nor remember sufficiently how considerate he had been to me when I was lame-footed; and how when he died, though he had not been dead an hour, it seemed as if he had died a great while ago, such a distance there is betwixt life and death; and how I bore his death as I thought pretty well at first, but afterwards it haunted and haunted me, and though I did not cry or take it to heart as some do, and as I think he would have done if I had died, yet I missed him all day long, and knew not till then how much I had loved him. I missed his kindness, and I missed his crossness, and wished him to be alive again, to be quarreling with him (for we quarreled sometimes), rather than not have him again, and was as uneasy without him, as he, their poor uncle, must have been when the doctor took off his limb. Here the children fell a-crying, and asked if their little mourning which they had on was not for Uncle John, and they looked up, and prayed me not to go on about their uncle, but to tell them some stories about their pretty dead mother.

Then I told how for seven long years, in hope sometimes, sometimes in despair, yet persisting ever, I courted the fair Alice W——n; and, as much as children could

understand, I explained to them what coyness and difficulty and denial meant in maidens—when suddenly, turning to Alice, the soul of the first Alice looked out at her eyes with such a reality of re-presentment that I became in doubt which of them stood there before me, or whose that bright hair was; and while I stood gazing, both the children gradually grew fainter to my view, receding, and still receding till nothing at last but two mournful features were seen in the uttermost distance, which, without speech, strangely impressed upon me the effects of speech: "We are not of Alice, nor of thee, nor are we children at all. The children of Alice call Bartrum father. We are nothing; less than nothing, and dreams. We are only what might have been, and must wait upon the tedious shores of Lethe millions of ages before we have existence, and a name"—and immediately awaking, I found myself quietly seated in my bachelor armchair, where I had fallen asleep, with the faithful Bridget unchanged by my side—but John L. (or James Elia) was gone forever.

POOR RELATIONS[1]

Charles Lamb

A Poor Relation—is the most irrelevant thing in nature,—a piece of impertinent correspondency,—an odious approximation,—a haunting conscience,—a preposterous shadow, lengthening in the noontide of our prosperity,—an unwelcome remembrancer,—a perpetually recurring mortification,—a drain on your purse,—a more intolerable dun upon your pride,—a drawback upon success,—a rebuke to your rising,—a stain in your blood,—a blot on your 'scutcheon,—a rent in your garment,—a death's head at your banquet,—Agathocles's pot,—a Mordecai in your gate,—a Lazarus at your door,—a lion in your path,—a frog in your chamber,—a fly in your ointment,—a mote in your eye,—a triumph to your enemy, an apology to your friends,—the one thing not needful,—the hail in harvest,—the ounce of sour in a pound of sweet.

He is known by his knock. Your heart telleth you "That is Mr. ——." A rap, between familiarity and respect, that demands, and, at the same time, seems to despair of, entertainment. He entereth smiling and—embarrassed. He holdeth out his hand to you to shake and—draweth it back again. He casually looketh in about dinner-time—when the table is full. He offereth to go away, seeing you have company—but is induced to stay. He filleth a chair, and your visitor's two children are accommodated at a side table. He never cometh

[1] First published in the *London Magazine*, May, 1822.

upon open days, when your wife says with some complacency, "My dear, perhaps Mr. —— will drop in to-day." He remembereth birthdays—and professeth he is fortunate to have stumbled upon one. He declareth against fish, the turbot being small—yet suffereth himself to be importuned into a slice against his first resolution. He sticketh by the port—yet will be prevailed upon to empty the remainder glass of claret, if a stranger press it upon him. He is a puzzle to the servants, who are fearful of being too obsequious, or not civil enough, to him. The guests think "they have seen him before." Every one speculateth upon his condition; and the most part take him to be—a tide waiter. He calleth you by your Christian name to imply that his other is the same with your own. He is too familiar by half, yet you wish he had less diffidence. With half the familiarity he might pass for a casual dependent; with more boldness he would be in no danger of being taken for what he is. He is too humble for a friend, yet taketh on him more state than befits a client. He is a worse guest than a country tenant, inasmuch as he bringeth up no rent—yet 'tis odds, from his garb and demeanor, that your guests take him for one. He is asked to make one at the whist table, refuseth on the score of poverty, and—resents being left out. When the company break up he proffereth to go for a coach—and lets the servant go. He recollects your grandfather, and will thrust in some mean and quite unimportant anecdote of the family. He knew it when it was not quite so flourishing as he is "blest in seeing it now." He reviveth past situations to institute what he calleth favorable comparisons. With a reflecting sort of congratulation, he will inquire the price of your furniture, and insults you with a special commendation of your window-curtains. He is of

opinion that the urn is the more elegant shape, but, after all, there was something more comfortable about the old tea-kettle—which you must remember. He dare say you must find a great convenience in having a carriage of your own, and appealeth to your lady if it is not so. Inquireth if you have had your arms done on vellum yet; and did not know, till lately, that such-and-such had been the crest of the family. His memory is unseasonable, his compliments perverse, his talk a trouble, his stay pertinacious; and when he goeth away, you dismiss his chair into a corner, as precipitately as possible, and feel fairly rid of two nuisances.

There is a worse evil under the sun, and that is—a female Poor Relation. You may do something with the other—you may pass him off tolerably well; but your indigent she-relative is hopeless. "He is an old humorist," you may say, "and affects to go threadbare. His circumstances are better than folks would take them to be." You are fond of having a character at your table, and truly he is one. But in the indications of female poverty there can be no disguise. No woman dresses below herself from caprice. The truth must out without shuffling. "She is plainly related to the L——s; or what does she at their house?" She is, in all probability, your wife's cousin. Nine times out of ten, at least, this is the case. Her garb is something between a gentlewoman and a beggar, yet the former evidently predominates. She is most provokingly humble and ostentatiously sensible to her inferiority. He may require to be repressed sometimes—*aliquando sufflaminandus erat*—but there is no raising her. You send her soup at dinner, and she begs to be helped—after the gentlemen. Mr.—— requests the honor of taking wine with her; she hesitates between port and madeira, and chooses the former—because he

does. She calls the servant "Sir," and insists on not troubling him to hold her plate. The housekeeper patronizes her. The children's governess takes upon her to correct her when she has mistaken the piano for a harpsichord.

Richard Amlet, Esq., in the play, is a notable instance of the disadvantages to which this chimerical notion of affinity constituting a claim to acquaintance may subject the spirit of a gentleman. A little foolish blood is all that is betwixt him and a lady of great estate. His stars are perpetually crossed by the malignant maternity of an old woman, who persists in calling him "her son Dick." But she has wherewithal in the end to recompense his indignities and float him again upon the brilliant surface, under which it had been her seeming business and pleasure all along to sink him. All men, besides, are not of Dick's temperament. I knew an Amlet in real life, who, wanting Dick's buoyancy, sank indeed. Poor W—— was of my own standing at Christ's, a fine classic, and a youth of promise. If he had a blemish, it was too much pride, but its quality was inoffensive; it was not of that sort which hardens the heart and serves to keep inferiors at a distance—it only sought to ward off derogation from itself. It was the principle of self-respect carried as far as it could go without infringing upon that respect which he would have every one else equally maintain for himself. He would have you to think alike with him on this topic. Many a quarrel have I had with him, when we were rather older boys, and our tallness made us more obnoxious to observation in the blue clothes, because I would not thread the alleys and blind ways of the town with him to elude notice, when we have been out together on a holiday in the streets of this sneering and prying metropolis.

W—— went, sore with these notions, to Oxford, where the dignity and sweetness of a scholar's life, meeting with the alloy of a humble introduction, wrought in him a passionate devotion to the place, with a profound aversion from the society. The servitor's gown (worse than his school array) clung to him with Nessian venom. He thought himself ridiculous in a garb under which Latimer must have walked erect, and in which Hooker, in his young days, possibly flaunted in a vein of no discommendable vanity. In the depths of college shades, or in his lonely chamber, the poor student shrunk from observation. He found shelter among books, which insult not, and studies, that ask no questions of a youth's finances. He was lord of his library and seldom cared for looking out beyond his domains. The healing influence of studious pursuits was upon him to soothe and to abstract.

He was almost a healthy man, when the waywardness of his fate broke out against him with a second and worse malignity. The father of W—— had hitherto exercised the humble profession of house-painter at N——, near Oxford. A supposed interest with some of the heads of colleges had now induced him to take up his abode in that city, with the hope of being employed upon some public works which were talked of. From that moment I read in the countenance of the young man the determination which at length tore him from academical pursuits forever. To a person unacquainted with our universities, the distance between the gownsmen and the townsmen, as they are called—the trading part of the latter especially—is carried to an excess that would appear harsh and incredible. The temperament of W——'s father was diametrically the reverse of his own. Old W—— was a little, busy, cring-

ing tradesman, who, with his son upon his arm, would stand bowing and scraping, cap in hand, to anything that wore the semblance of a gown—insensible to the winks and opener remonstrances of the young man, to whose chamber-fellow, or equal in standing, perhaps, he was thus obsequiously and gratuitously ducking. Such a state of things could not last. W—— must change the air of Oxford or be suffocated. He chose the former; and let the sturdy moralist, who strains the point of the filial duties as high as they can bear, censure the dereliction; he cannot estimate the struggle. I stood with W—— the last afternoon I ever saw him, under the eaves of his paternal dwelling. It was in the fine lane leading from the High Street to the back of —— college, where W—— kept his rooms. He seemed thoughtful and more reconciled. I ventured to rally him, finding him in a better mood, upon a representation of the Artist Evangelist, which the old man, whose affairs were beginning to flourish, had caused to be set up in a splendid sort of frame over his really handsome shop, either as a token of prosperity, or badge of gratitude to his saint. W—— looked up at the Luke, and, like Satan, "knew his mounted sign—and fled." A letter on his father's table the next morning announced that he had accepted a commission in a regiment about to embark for Portugal. He was among the first who perished before the walls of St. Sebastian.

I do not know how, upon a subject which I began with treating half seriously, I should have fallen upon a recital so eminently painful; but this theme of poor relationship is replete with so much matter for tragic as well as comic associations that it is difficult to keep the account distinct without blending. The earliest impressions which I received on this matter are certainly not

attended with anything painful, or very humiliating, in the recalling. At my father's table (no very splendid one) was to be found, every Saturday, the mysterious figure of an aged gentleman, clothed in neat black, of a sad yet comely appearance. His deportment was of the essence of gravity; his words few or none; and I was not to make a noise in his presence. I had little inclination to have done so, for my cue was to admire in silence. A particular elbow chair was appropriated to him, which was in no case to be violated. A peculiar sort of sweet pudding, which appeared on no other occasion, distinguished the days of his coming. I used to think him a prodigiously rich man. All I could make out of him was that he and my father had been schoolfellows a world ago at Lincoln, and that he came from the Mint. The Mint I knew to be a place where all the money was coined, and I thought he was the owner of all that money. Awful ideas of the Tower twined themselves about his presence. He seemed above human infirmities and passions. A sort of melancholy grandeur invested him. From some inexplicable doom I fancied him obliged to go about in an eternal suit of mourning, a captive, a stately being, let out of the Tower on Saturdays.

Often have I wondered at the temerity of my father, who, in spite of an habitual general respect which we all in common manifested towards him, would venture now and then to stand up against him in some argument touching their youthful days. The houses of the ancient city of Lincoln are divided, as most of my readers know, between the dwellers on the hill and in the valley. This marked distinction formed an obvious division between the boys who lived above (however brought together in a common school) and the boys

whose paternal residence was on the plain, a sufficient cause of hostility in the code of these young Grotiuses. My father had been a leading Mountaineer, and would still maintain the general superiority, in skill and hardihood, of the *Above Boys* (his own faction) over the *Below Boys* (so were they called), of which party his contemporary had been a chieftain. Many and hot were the skirmishes on this topic—the only one upon which the old gentleman was ever brought out—and bad blood bred, even sometimes almost to the recommencement (so I expected) of actual hostilities. But my father, who scorned to insist upon advantages, generally contrived to turn the conversation upon some adroit bycommendation of the old Minster; in the general preference of which, before all other cathedrals in the island, the dweller on the hill and the plain-born could meet on a conciliating level and lay down their less important differences.

Once only I saw the old gentleman really ruffled, and I remembered with anguish the thought that came over me: "Perhaps he will never come here again." He had been pressed to take another plate of the viand, which I have already mentioned as the indispensable concomitant of his visits. He had refused with a resistance amounting to rigor, when my aunt, an old Lincolnian, but who had something of this in common with my cousin Bridget that she would sometimes press civility out of season, uttered the following memorable application: "Do take another slice, Mr. Billet, for you do not get pudding every day." The old gentleman said nothing at the time, but he took occasion in the course of the evening, when some argument had intervened between them, to utter with an emphasis which chilled the company, and which chills me now as I write it: "Woman,

you are superannuated." John Billet did not survive long after the digesting of this affront; but he survived long enough to assure me that peace was actually restored! and, if I remember aright, another pudding was discreetly substituted in the place of that which had occasioned the offense. He died at the Mint (anno 1781) where he had long held, what he accounted, a comfortable independence; and with five pounds, fourteen shillings, and a penny, which were found in his escritoire after his decease, left the world, blessing God that he had enough to bury him, and that he had never been obliged to any man for a sixpence. This was—a Poor Relation.

MILTON AND THE PURITANS[1]

Thomas Macaulay

A mere essay should be nothing to a person who at the ripe age of seven was compiling a *"Compendium of Universal Knowledge*—perhaps one of the first of the "Outlines" that grow so plentifully to-day. This is said to be only one of many startling exploits of young Thomas Babington Macaulay. He was born in 1800 in Leicestershire. His father ran true to his Scotch ancestry, both in thrift and in belligerency, being both a successful merchant and the editor of an abolitionist paper. Thomas was graduated from Trinity College, Cambridge, in 1822, and was elected Fellow in 1824. He grew to manhood under the influence of a group of intellectual independents of which his father was one and of which Wilberforce, Babington, and Hannah More were moving spirits. His first public speech was made at an abolitionist meeting in 1824. For the next twenty-five years his voice was heard in Parliament or from the platform in defense of every liberal movement. His essay on Milton, from which "Milton and the Puritans" is taken, was written for the *Edinburgh Review* in 1825. This was the first of a series of brilliant essays that appeared in the *Review* during the nineteen years following. Macaulay was a champion of the parliamentary Reform of 1832, a Whig, and a firm believer in party government. He was an ardent exponent of orderly evolution in government and an uncompromising opponent of radical movements. He stood firmly for toleration in church and state and made himself equally unpopular with the established church party and dissenters. His four volumes upon *The History of England from the Accession of James II* were instantly popular; a fifth volume was published after his death. He is essentially an orator, and his temperament is that of the advocate rather than of the judge; his style is orotund and fluent, his sentences frequently periodic, though not long. Whether the case for which he speaks be a strong one or one in need of a champion, it loses nothing through Macaulay's statement of it. He died at the age of fifty-nine.

We would speak first of the Puritans, the most remarkable body of men, perhaps, which the world has ever produced. The odious and ridiculous parts of their char-

[1] From *Milton,* first published in the *Edinburgh Review,* 1825.

acter lie on the surface. He that runs may read them; nor have there been wanting attentive and malicious observers to point them out. For many years after the Restoration they were the theme of unmeasured invective and derision. They were exposed to the utmost licentiousness of the press and of the stage at the time when the press and the stage were most licentious. They were not men of letters; they were as a body unpopular; they could not defend themselves; and the public would not take them under its protection. They were therefore abandoned, without reserve, to the tender mercies of the satirists and dramatists. The ostentatious simplicity of their dress, their sour aspect, their nasal twang, their stiff posture, their long graces, their Hebrew names, the Scriptural phrases which they introduced on every occasion, their contempt of human learning, their detestation of polite amusements, were indeed fair game for the laughers. But it is not from the laughers alone that the philosophy of history is to be learnt. And he who approaches this subject should carefully guard against the influence of that potent ridicule which has already misled so many excellent writers.

> "Ecco il fonte del riso, ed ecco il rio
> Che mortali perigli in se contiene:
> Hor qui tener a fren nostro desio,
> Ed esser cauti molto a noi conviene."

Those who roused the people to resistance, who directed their measures through a long series of eventful years, who formed, out of the most unpromising materials, the finest army that Europe had ever seen, who trampled down king, church, and aristocracy, who, in the short intervals of domestic sedition and rebellion, made the name of England terrible to every nation on

the face of the earth, were no vulgar fanatics. Most of their absurdities were mere external badges, like the signs of freemasonry, or the dresses of friars. We regret that these badges were not more attractive. We regret that a body to whose courage and talents mankind has owed inestimable obligations had not the lofty elegance which distinguished some of the adherents of Charles the First, or the easy good breeding for which the court of Charles the Second was celebrated. But, if we must make our choice, we shall, like Bassanio in the play, turn from the specious caskets which contain only the Death's head and the Fool's head and fix on the plain leaden chest which conceals the treasure.

The Puritans were men whose minds had derived a peculiar character from the daily contemplation of superior beings and eternal interests. Not content with acknowledging, in general terms, an overruling Providence, they habitually ascribed every event to the will of the Great Being, for whose power nothing was too vast, for whose inspection nothing was too minute. To know him, to serve him, to enjoy him, was with them the great end of existence. They rejected with contempt the ceremonious homage which other sects substituted for the pure worship of the soul. Instead of catching occasional glimpses of the Deity through an obscuring veil, they aspired to gaze full on his intolerable brightness and to commune with him face to face. Hence originated their contempt for terrestrial distinctions. The difference between the greatest and the meanest of mankind seemed to vanish when compared with the boundless interval which separated the whole race from him on whom their own eyes were constantly fixed. They recognized no title to superiority but his favor; and, confident of that favor, they despised all the accom-

plishments and all the dignities of the world. If they were unacquainted with the works of philosophers and poets, they were deeply read in the oracles of God. If their names were not found in the registers of heralds, they were recorded in the Book of Life. If their steps were not accompanied by a splendid train of menials, legions of ministering angels had charge over them. Their palaces were houses not made with hands; their diadems crowns of glory which should never fade away. On the rich and the eloquent, on nobles and priests, they looked down with contempt, for they esteemed themselves rich in a more precious treasure, and eloquent in a more sublime language, nobles by the right of an earlier creation, and priests by the imposition of a mightier hand. The very meanest of them was a being to whose fate a mysterious and terrible importance belonged, on whose slightest action the spirits of light and darkness looked with anxious interest, who had been destined, before heaven and earth were created, to enjoy a felicity which should continue when heaven and earth should have passed away. Events which short-sighted politicians ascribed to earthly causes had been ordained on his account. For his sake empires had risen, and flourished, and decayed. For his sake the Almighty had proclaimed His will by the pen of the evangelist and the harp of the prophet. He had been wrested by no common deliverer from the grasp of no common foe. He had been ransomed by the sweat of no vulgar agony, by the blood of no earthly sacrifice. It was for him that the sun had been darkened, that the rocks had been rent, that the dead had risen, that all nature had shuddered at the sufferings of her expiring God.

Thus the Puritan was made up of two different men, the one all self-abasement, penitence, gratitude, passion,

the other proud, calm, inflexible, sagacious. He prostrated himself in the dust before his Maker; but he set his foot on the neck of his king. In his devotional retirement he prayed with convulsions, and groans, and tears. He was half-maddened by glorious or terrible illusions. He heard the lyres of angels or the tempting whispers of fiends. He caught a gleam of the Beatific Vision, or woke screaming from dreams of everlasting fire. Like Vane, he thought himself intrusted with the scepter of the millennial year. Like Fleetwood, he cried in the bitterness of his soul that God had hid his face from him. But when he took his seat in the council, or girt on his sword for war, these tempestuous workings of the soul had left no perceptible trace behind them. People who saw nothing of the godly but their uncouth visages and heard nothing from them but their groans and their whining hymns might laugh at them. But those had little reason to laugh who encountered them in the hall of debate or in the field of battle. These fanatics brought to civil and military affairs a coolness of judgment and an immutability of purpose which some writers have thought inconsistent with their religious zeal, but which were in fact the necessary effects of it. The intensity of their feelings on one subject made them tranquil on every other. One overpowering sentiment had subjected to itself pity and hatred, ambition and fear. Death had lost its terrors and pleasure its charms. They had their smiles and their tears, their raptures and their sorrows, but not for the things of this world. Enthusiasm had made them stoics, had cleared their minds from every vulgar passion and prejudice, and raised them above the influence of danger and of corruption. It sometimes might lead them to pursue unwise ends, but never to choose unwise means. They went through

the world, like Sir Artegal's iron man Talus with his flail, crushing and trampling down oppressors, mingling with human beings, but having neither part nor lot in human infirmities, insensible to fatigue, to pleasure, and to pain, not to be pierced by any weapon, not to be withstood by any barrier.

Such we believe to have been the character of the Puritans. We perceive the absurdity of their manners. We dislike the sullen gloom of their domestic habits. We acknowledge that the tone of their mind was often injured by straining after things too high for mortal reach; and we know that, in spite of their hatred of popery, they too often fell into the worst vices of that bad system, intolerance and extravagant austerity, that they had their anchorites and their crusades, their Dunstans and their De Montforts, their Dominics and their Escobars. Yet, when all circumstances are taken into consideration, we do not hesitate to pronounce them a brave, a wise, an honest, and an useful body.

The Puritans espoused the cause of civil liberty mainly because it was the cause of religion. There was another party, by no means numerous, but distinguished by learning and ability, which acted with them on very different principles. We speak of those whom Cromwell was accustomed to call the Heathens, men who were, in the phraseology of that time, doubting Thomases or careless Gallios with regard to religious subjects, but passionate worshipers of freedom. Heated by the study of ancient literature, they set up their country as their idol, and proposed to themselves the heroes of Plutarch as their examples. They seem to have borne some resemblance to the Brissotines of the French Revolution. But it is not very easy to draw the line of distinction between them and their devout associates, whose tone and manner they

sometimes found it convenient to affect, and sometimes, it is probable, imperceptibly adopted.

We now come to the Royalists. We shall attempt to speak of them, as we have spoken of their antagonists, with perfect candor. We shall not charge upon a whole party the profligacy and baseness of the horse-boys, gamblers, and bravoes, whom the hope of license and plunder attracted from all the dens of Whitefriars to the standard of Charles, and who disgraced their associates by excesses which, under the stricter discipline of Parliamentary armies, were never tolerated. We will select a more favorable specimen. Thinking as we do that the cause of the King was the cause of bigotry and tyranny, we yet cannot refrain from looking with complacency on the character of the honest old Cavaliers. We feel a national pride in comparing them with the instruments which the despots of other countries are compelled to employ, with the mutes who throng their antechambers, and the Janissaries who mount guard at their gates. Our Royalist countrymen were not heartless, dangling courtiers, bowing at every step, and simpering at every word. They were not mere machines for destruction, dressed up in uniforms, caned into skill, intoxicated into valor, defending without love, destroying without hatred. There was a freedom in their subserviency, a nobleness in their very degradation. The sentiment of individual independence was strong within them. They were indeed misled, but by no base or selfish motive. Compassion and romantic honor, the prejudices of childhood, and the venerable names of history threw over them a spell potent as that of Duessa; and, like the Red-Cross Knight, they thought that they were doing battle for an injured beauty while they defended a false and loathsome sorceress. In truth they scarcely entered at all into the

merits of the political question. It was not for a treacherous king or an intolerant church that they fought, but for the old banner which had waved in so many battles over the heads of their fathers, and for the altars at which they had received the hands of their brides. Though nothing could be more erroneous than their political opinions, they possessed, in a far greater degree than their adversaries, those qualities which are the grace of private life. With many of the vices of the Round Table, they had also many of its virtues, courtesy, generosity, veracity, tenderness, and respect for women. They had far more both of profound and of polite learning than the Puritans. Their manners were more engaging, their tempers more amiable, their tastes more elegant, and their households more cheerful.

Milton did not strictly belong to any of the classes which we have described. He was not a Puritan. He was not a freethinker. He was not a Royalist. In his character the noblest qualities of every party were combined in harmonious union. From the Parliament and from the Court, from the conventicle and from the Gothic cloister, from the gloomy and sepulchral circles of the Roundheads, and from the Christmas revel of the hospitable Cavalier, his nature selected and drew to itself whatever was great and good, while it rejected all the base and pernicious ingredients by which those finer elements were defiled. Like the Puritans, he lived

"As ever in his great task-master's eye."

Like them, he kept his mind continually fixed on an Almighty Judge and an eternal reward. And hence he acquired their contempt of external circumstances, their fortitude, their tranquillity, their inflexible resolution.

But not the coolest skeptic or the most profane scoffer was more perfectly free from the contagion of their frantic delusions, their savage manners, their ludicrous jargon, their scorn of science, and their aversion to pleasure. Hating tyranny with a perfect hatred, he had nevertheless all the estimable and ornamental qualities which were almost entirely monopolized by the party of the tyrant. There was none who had a stronger sense of the value of literature, a finer relish for every elegant amusement, or a more chivalrous delicacy of honor and love. Though his opinions were democratic, his tastes and his associates were such as harmonize best with monarchy and aristocracy. He was under the influence of all the feelings by which the gallant Cavaliers were misled. But of those feelings he was the master and not the slave. Like the hero of Homer, he enjoyed all the pleasures of fascination; but he was not fascinated. He listened to the song of the Sirens; yet he glided by without being seduced to their fatal shore. He tasted the cup of Circe; but he bore about him a sure antidote against the effects of its bewitching sweetness. The allusions which captivated his imagination never impaired his reasoning powers. The statesman was proof against the splendor, the solemnity, and the romance which enchanted the poet. Any person who will contrast the sentiments expressed in his treatises on *Prelacy* with the exquisite lines on ecclesiastical architecture and music in the *Penseroso,* which was published about the same time, will understand our meaning. This is an inconsistency which, more than anything else, raises his character in our estimation, because it shows how many private tastes and feelings he sacrificed in order to do what he considered his duty to mankind. It is the very struggle of the noble Othello. His heart relents, but his hand is firm. He does nought

in hate, but all in honor. He kisses the beautiful deceiver before he destroys her.

That from which the public character of Milton derives its great and peculiar splendor still remains to be mentioned. If he exerted himself to overthrow a forsworn king and a persecuting hierarchy, he exerted himself in conjunction with others. But the glory of the battle which he fought for the species of freedom which is the most valuable, and which was then the least understood, the freedom of the human mind, is all his own. Thousands and tens of thousands among his contemporaries raised their voices against ship-money and the Star Chamber. But there were few indeed who discerned the more fearful evils of moral and intellectual slavery and the benefits which would result from the liberty of the press and the unfettered exercise of private judgment. These were the objects which Milton justly conceived to be the most important. He was desirous that the people should think for themselves as well as tax themselves, and should be emancipated from the dominion of prejudice as well as from that of Charles. He knew that those who, with the best intentions, overlooked these schemes of reform and contented themselves with pulling down the King and imprisoning the malignants acted like the heedless brothers in his own poem, who, in their eagerness to disperse the train of the sorcerer, neglected the means of liberating the captive. They thought only of conquering when they should have thought of disenchanting.

> "Oh, ye mistook! Ye should have snatched his wand
> And bound him fast. Without the rod reversed,
> And backward mutters of dissevering power,
> We cannot free the lady that sits here
> Bound in strong fetters fixed and motionless."

To reverse the rod, to spell the charm backward, to break the ties which bound a stupefied people to the seat of enchantment was the noble aim of Milton. To this all his public conduct was directed. For this he joined the Presbyterians; for this he forsook them. He fought their perilous battle; but he turned away with disdain from their insolent triumph. He saw that they, like those whom they had vanquished, were hostile to the liberty of thought. He therefore joined the Independents and called upon Cromwell to break the secular chain and to save free conscience from the paw of the Presbyterian wolf. With a view to the same great object, he attacked the licensing system in that sublime treatise which every statesman should wear as a sign upon his hand and as frontlets between his eyes. His attacks were, in general, directed less against particular abuses than against those deeply seated errors on which almost all abuses are founded, the servile worship of eminent men and the irrational dread of innovation.

That he might shake the foundations of these debasing sentiments more effectually he always selected for himself the boldest literary services. He never came up in the rear when the outworks had been carried and the breach entered. He pressed into the forlorn hope. At the beginning of the changes, he wrote with incomparable energy and eloquence against the bishops. But, when his opinion seemed likely to prevail, he passed on to other subjects and abandoned prelacy to the crowd of writers who now hastened to insult a falling party. There is no more hazardous enterprise than that of bearing the torch of truth into those dark and infected recesses in which no light has ever shone. But it was the choice and the pleasure of Milton to penetrate the noisome vapors, and to brave the terrible explosion. Those who most

disapprove of his opinions must respect the hardihood with which he maintained them. He, in general, left to others the credit of expounding and defending the popular parts of his religious and political creed. He took his own stand upon those which the great body of his countrymen reprobated as criminal, or derided as paradoxical. He stood up for divorce and regicide. He attacked the prevailing systems of education. His radiant and beneficent career resembled that of the god of light and fertility.

> "Nitor in adversum; nec me, qui cætera, vincit
> Impetus, et rapido contrarius evehor orbi."

It is to be regretted that the prose writings of Milton should, in our time, be so little read. As compositions they deserve the attention of every man who wishes to become acquainted with the full power of the English language. They abound with passages compared with which the finest declamations of Burke sink into insignificance. They are a perfect field of cloth of gold. The style is stiff with gorgeous embroidery. Not even in the earlier books of the *Paradise Lost* has the great poet ever risen higher than in those parts of his controversial works in which his feelings, excited by conflict, find a vent in bursts of devotional and lyric rapture. It is, to borrow his own majestic language, "a seven-fold chorus of hallelujahs and harping symphonies."

We had intended to look more closely at these performances, to analyze the peculiarities of the diction, to dwell at some length on the sublime wisdom of the *Areopagitica* and the nervous rhetoric of the *Iconoclast,* and to point out some of those magnificent passages which occur in the *Treatise of Reformation,* and the *Animadversions on the Remonstrant.* But the length to

which our remarks have already extended renders this impossible.

We must conclude. And yet we can scarcely tear ourselves away from the subject. The days immediately following the publication of this relic of Milton appear to be peculiarly set apart and consecrated to his memory. And we shall scarcely be censured if, on this his festival, we be found lingering near his shrine, how worthless soever may be the offering which we bring to it. While this book lies on our table, we seem to be contemporaries of the writer. We are transported a hundred and fifty years back. We can almost fancy that we are visiting him in his small lodging; that we see him sitting at the old organ beneath the faded green hangings; that we can catch the quick twinkle of his eyes, rolling in vain to find the day; that we are reading in the lines of his noble countenance the proud and mournful history of his glory and his affliction. We image to ourselves the breathless silence in which we should listen to his slightest word, the passionate veneration with which we should kneel to kiss his hand and weep upon it, the earnestness with which we should endeavor to console him, if indeed such a spirit could need consolation, for the neglect of an age unworthy of his talents and his virtues, the eagerness with which we should contest with his daughters, or with his Quaker friend Elwood, the privilege of reading Homer to him, or of taking down the immortal accents which flowed from his lips.

These are perhaps foolish feelings. Yet we cannot be ashamed of them; nor shall we be sorry if what we have written shall in any degree excite them in other minds. We are not much in the habit of idolizing either the living or the dead. And we think that there is no more certain indication of a weak and ill-regulated intellect

than that propensity which, for want of a better name, we will venture to christen Boswellism. But there are a few characters which have stood the closest scrutiny and the severest tests, which have been tried in the furnace and have proved pure, which have been weighed in the balance and have not been found wanting, which have been declared sterling by the general consent of mankind, and which are visibly stamped with the image and superscription of the Most High. These great men we trust that we know how to prize; and of these was Milton. The sight of his books, the sound of his name are pleasant to us. His thoughts resemble those celestial fruits and flowers which the Virgin Martyr of Massinger sent down from the gardens of Paradise to the earth, and which were distinguished from the productions of other soils, not only by superior bloom and sweetness, but by miraculous efficacy to invigorate and to heal. They are powerful, not only to delight, but to elevate and purify. Nor do we envy the man who can study either the life or the writings of the great poet and patriot without aspiring to emulate, not indeed the sublime works with which his genius has enriched our literature, but the zeal with which he labored for the public good, the fortitude with which he endured every private calamity, the lofty disdain with which he looked down on temptations and dangers, the deadly hatred which he bore to bigots and tyrants, and the faith which he so sternly kept with his country and with his fame.

SHAKESPEARE[1]

Thomas Carlyle

Primarily an essayist and historian, Carlyle has also been variously estimated as prophet, philosopher, prose poet, and even comedian. Perhaps he was the last of these rather than the first. He had in his facial appearance the "lost child look," and his writings have the robustness and unexpected contrasts, the savage sportiveness, the grotesquerie, and the profoundly diverting suggestiveness of the greatest comedian, the Greek Aristophanes. Carlyle was born in Ecclefechan, Scotland, in 1795, and died in 1881. His wife, Jane Baillie Welsh Carlyle, was a celebrated beauty, no less noted in her day for wit than was her husband. But hers was a merrier wit.

Carlyle was educated at Edinburgh University, and in 1866 was elected its rector. He was himself for a time a schoolmaster. He was a good German scholar, his translations from the German themselves becoming English literature. His best translation is of Goethe's *Wilhelm Meister*. His collected works in 1874 numbered thirty-seven volumes, of which the most famous are *Sartor Resartus, The French Revolution, Heroes and Hero-worship, Past and Present, Oliver Cromwell,* and *History of Frederick the Great.* Carlyle's style is richly various, ranging from the perversely strident and irregular diction and movement of *The French Revolution* to the delicate yet forceful flow of phrase and apt and beautiful wording of many passages in *Heroes and Hero-worship.* All his work is permeated with his earnest spirit, with his intense hatred of what is insincere in life and expression, and with his rich enthusiasm for what is great and good.

Of this Shakespeare of ours, perhaps the opinion one sometimes hears a little idolatrously expressed is, in fact, the right one. I think the best judgment not of this country only, but of Europe at large, is slowly pointing to the conclusion: That Shakespeare is the chief of all poets hitherto; the greatest intellect who, in our recorded world, has left record of himself in the way of literature.

[1] From Lecture III, "The Hero as Poet," May 12, 1840, published in *Heroes and Hero-worship,* 1841.

On the whole, I know not such a power of vision, such a faculty of thought, if we take all the characters of it, in any other man. Such a calmness of depth; placid joyous strength; all things imaged in that great soul of his so true and clear, as in a tranquil unfathomable sea! It has been said that in the constructing of Shakespeare's dramas there is, apart from all other "faculties" as they are called, an understanding manifested, equal to that in Bacon's *Novum Organum*. That is true; and it is not a truth that strikes every one. It would become more apparent if we tried, any of us for himself, how, out of Shakespeare's dramatic materials, we could fashion such a result! The built house seems all so fit—everyway as it should be, as if it came there by its own law and the nature of things—we forget the rude disorderly quarry it was shaped from. The very perfection of the house, as if Nature herself had made it, hides the builder's merit. Perfect, more perfect than any other man, we may call Shakespeare in this: he discerns, knows as by instinct, what condition he works under, what his materials are, what his own force and its relation to them is. It is not a transitory glance of insight that will suffice; it is deliberate illumination of the whole matter; it is a calmly seeing eye; a great intellect, in short. How a man, of some wide thing that he has witnessed, will construct a narrative, what kind of picture and delineation he will give of it—is the best measure you could get of what intellect is in the man. Which circumstance is vital and shall stand prominent; which unessential, fit to be suppressed; where is the true beginning, the true sequence and ending? To find out this you ask the whole force of insight that is in the man. He must understand the thing; according to the depth of his understanding will the fitness of his answer be. You will try him so. Does like

join itself to like; does the spirit of method stir in that confusion so that its embroilment becomes order? Can the man say, *Fiat lux,* Let there be light; and out of chaos make a world? Precisely as there is light in himself will he accomplish this.

Or indeed we may say again, it is in what I called portrait-painting, delineating of men and things, especially of men, that Shakespeare is great. All the greatness of the man comes out decisively here. It is unexampled, I think, that calm creative perspicacity of Shakespeare. The thing he looks at reveals not this or that face of it, but its inmost heart and generic secret; it dissolves itself as in light before him so that he discerns the perfect structure of it. Creative, we said—poetic creation; what is this too but seeing the thing sufficiently? The word that will describe the thing follows of itself from such clear intense sight of the thing. And is not Shakespeare's morality, his valor, candor, tolerance, truthfulness, his whole victorious strength and greatness, which can triumph over such obstructions, visible there too? Great as the world! No twisted, poor convex-concave mirror, reflecting all objects with its own convexities and concavities, a perfectly level mirror—that is to say withal, if we will understand it, a man justly related to all things and men, a good man. It is truly a lordly spectacle how this great soul takes in all kinds of men and objects, a Falstaff, an Othello, a Juliet, a Coriolanus; sets them all forth to us in their round completeness; loving, just, the equal brother of all. *Novum Organum* and all the intellect you will find in Bacon is of a quite secondary order—earthly, material, poor in comparison with this. Among modern men, one finds, in strictness, almost nothing of the same rank. Goethe alone, since the days of Shakespeare, reminds me of it. Of him too you say that he saw

the object; you may say what he himself says of Shakespeare: "His characters are like watches with dial-plates of transparent crystal; they show you the hour like others, and the inward mechanism also is all visible."

The seeing eye! It is this that discloses the inner harmony of things, what Nature meant, what musical idea Nature has wrapped-up in these often rough embodiments. Something she did mean. To the seeing eye that something were discernible. Are they base, miserable things? You can laugh over them, you can weep over them; you can in some way or other genially relate yourself to them; you can, at lowest, hold your peace about them, turn away your own and others' face from them, till the hour come for practically exterminating and extinguishing them! At bottom, it is the poet's first gift, as it is all men's, that he have intellect enough. He will be a poet if he have: a poet in word; or failing that, perhaps still better, a poet in act. Whether he write at all; and if so, whether in prose or in verse, will depend on accidents—who knows on what extremely trivial accidents—perhaps on his having had a singing-master, on his being taught to sing in his boyhood! But the faculty which enables him to discern the inner heart of things and the harmony that dwells there (for whatsoever exists has a harmony in the heart of it, or it would not hold together and exist) is not the result of habits or accidents, but the gift of Nature herself, the primary outfit for a heroic man in what sort soever. To the poet, as to every other, we say first of all, "See." If you cannot do that, it is of no use to keep stringing rhymes together, jingling sensibilities against each other, and name yourself a poet; there is no hope for you. If you can, there is, in prose or verse, in action or speculation, all manner of hope. The crabbed old schoolmaster used to ask, when they

brought him a new pupil, "But are ye sure he's not a dunce?" Why, really one might ask the same thing in regard to every man proposed for whatsoever function, and consider it as the one inquiry needful: Are ye sure he's not a dunce? There is, in this world, no other entirely fatal person.

For, in fact, I say the degree of vision that dwells in a man is a correct measure of the man. If called to define Shakespeare's faculty, I should say superiority of intellect, and think I had included all under that. What indeed are faculties? We talk of faculties as if they were distinct, things separable, as if a man had intellect, imagination, fancy, etc., as he has hands, feet, and arms. That is a capital error. Then again, we hear of a man's "intellectual nature" and of his "moral nature," as if these again were divisible and existed apart. Necessities of language do perhaps prescribe such forms of utterance; we must speak, I am aware, in that way, if we are to speak at all. But words ought not to harden into things for us. It seems to me, our apprehension of this matter is, for the most part, radically falsified thereby. We ought to know withal, and to keep forever in mind, that these divisions are at bottom but names; that man's spiritual nature, the vital force which dwells in him, is essentially one and indivisible; that what we call imagination, fancy, understanding, and so forth, are but different figures of the same power of insight, all indissolubly connected with each other, physiognomically related; that if we knew one of them, we might know all of them. Morality itself, what we call the moral quality of a man—what is this but another side of the one vital force whereby he is and works? All that a man does is physiognomical of him. You may see how a man would fight by the way in which he sings; his courage, or want of

courage, is visible in the word he utters, in the opinion he has formed, no less than in the stroke he strikes. He is one, and preaches the same self abroad in all these ways.

Without hands a man might have feet, and could still walk; but, consider it—without morality, intellect were impossible for him; a thoroughly immoral man could not know anything at all! To know a thing, what we can call knowing, a man must first love the thing, sympathize with it—that is, be virtuously related to it. If he have not the justice to put down his own selfishness at every turn, the courage to stand by the dangerous-true at every turn, how shall he know? His virtues, all of them, will lie recorded in his knowledge. Nature, with her truth, remains to the bad, to the selfish, and the pusillanimous forever a sealed book; what such can know of Nature is mean, superficial, small—for the uses of the day merely. But does not the very fox know something of Nature? Exactly so—it knows where the geese lodge! The human Reynard, very frequent everywhere in the world, what more does he know but this and the like of this? Nay, it should be considered too that, if the fox had not a certain vulpine morality, he could not even know where the geese were, or get at the geese! If he spent his time in splenetic atrabiliar reflections on his own misery, his ill usage by Nature, Fortune, and other foxes, and so forth—and had not courage, promptitude, practicality, and other suitable vulpine gifts and graces, he would catch no geese. We may say of the fox too that his morality and insight are of the same dimensions—different faces of the same internal unity of vulpine life! These things are worth stating, for the contrary of them acts with manifold very baleful perversion in this time; what limitations, modifications they require, your own candor will supply.

If I say, therefore, that Shakespeare is the greatest of

intellects, I have said all concerning him. But there is more in Shakespeare's intellect than we have yet seen. It is what I call an unconscious intellect; there is more virtue in it than he himself is aware of. Novalis beautifully remarks of him that those dramas of his are products of nature too, deep as Nature herself. I find a great truth in this saying. Shakespeare's art is not artifice; the noblest worth of it is not there by plan or precontrivance. It grows up from the deeps of Nature, through this noble, sincere soul, who is a voice of Nature. The latest generations of men will find new meanings in Shakespeare, new elucidations of their own human being—"new harmonies with the infinite structure of the Universe; concurrences with later ideas, affinities with the higher powers and senses of man." This well deserves meditating. It is Nature's highest reward to a true, simple, great soul that he get thus to be a part of herself. Such a man's works, whatsoever he with utmost conscious exertion and forethought shall accomplish, grow up withal unconsciously from the unknown deeps in him; as the oak-tree grows from the Earth's bosom, as the mountains and waters shape themselves, with a symmetry grounded on Nature's own laws, conformable to all truth whatsoever. How much in Shakespeare lies hid: his sorrows; his silent struggles known to himself; much that was not known at all, not speakable at all—like roots, like sap and forces working underground! Speech is great; but silence is greater.

Withal the joyful tranquillity of this man is notable. I will not blame Dante for his misery; it is as battle without victory, but true battle—the first indispensable thing. Yet I call Shakespeare greater than Dante in that he fought truly and did conquer. Doubt it not; he had his own sorrows. Those *Sonnets* of his will even testify

expressly in what deep waters he had waded, and swum struggling for his life—as what man like him ever failed to have to do? It seems to me a heedless notion, our common one, that he sat like a bird on the bough and sang forth, free and offhand, never knowing the troubles of other men. Not so; with no man is it so. How could a man travel forward from rustic deer-poaching to such tragedy-writing and not fall in with sorrows by the way? Or, still better, how could a man delineate a Hamlet, a Coriolanus, a Macbeth, so many suffering heroic hearts, if his own heroic heart had never suffered? And now, in contrast with all this, observe his mirthfulness, his genuine overflowing love of laughter! You would say in no point does he exaggerate but only in laughter. Fiery objurgations, words that pierce and burn, are to be found in Shakespeare; yet he is always in measure here; never what Johnson would remark as a specially "good hater." But his laughter seems to pour from him in floods; he heaps all manner of ridiculous nicknames on the butt he is bantering, tumbles and tosses him in all sorts of horse-play; you would say, with his whole heart laughs. And then, if not always the finest, it is always a genial laughter. Not at mere weakness, at misery or poverty; never. No man who *can* laugh, what we call laughing, will laugh at these things. It is some poor character only desiring to laugh, and have the credit of wit, that does so. Laughter means sympathy; good laughter is not "the crackling of thorns under the pot." Even at stupidity and pretension this Shakespeare does not laugh otherwise than genially. Dogberry and Verges tickle our very hearts, and we dismiss them covered with explosions of laughter; but we like the poor fellows only the better for our laughing—and hope they will get on well there, and

continue Presidents of the City-watch. Such laughter, like sunshine on the deep sea, is very beautiful to me.

We have no room to speak of Shakespeare's individual works; though perhaps there is much still waiting to be said on that head. Had we, for instance, all his plays reviewed as *Hamlet,* in *Wilhelm Meister,* is! A thing which might one day be done. August Wilhelm Schlegel has a remark on his historical plays, *Henry Fifth* and the others, which is worth remembering. He calls them a kind of national epic. Marlborough, you recollect, said he knew no English history but what he had learned from Shakespeare. There are really, if we look to it, few as memorable histories. The great salient points are admirably seized; all rounds itself off into a kind of rhythmic coherence; it is, as Schlegel says, epic—as indeed all delineation by a great thinker will be. There are right beautiful things in those pieces, which indeed together form one beautiful thing. That battle of Agincourt strikes me as one of the most perfect things in its sort we anywhere have of Shakespeare's. The description of the two hosts; the wornout, jaded English; the dread hour, big with destiny, when the battle shall begin; and then that deathless valor: "Ye good yeomen, whose limbs are made in England!" There is a noble patriotism in it—far other than the "indifference" you sometimes hear ascribed to Shakespeare. A true English heart breathes, calm and strong, through the whole business; not boisterous, protrusive, all the better for that. There is a sound in it like the ring of steel. This man too had a right stroke in him, had it come to that!

But I will say of Shakespeare's works generally that we have no full impress of him there—even as full as we have of many men. His works are so many windows

through which we see a glimpse of the world that was in him. All his works seem, comparatively speaking, cursory, imperfect, written under cramping circumstances, giving only here and there a note of the full utterance of the man. Passages there are that come upon you like splendor out of Heaven, bursts of radiance, illuminating the very heart of the thing; you say, "That is true, spoken once and forever; wheresoever and whensoever there is an open human soul, that will be recognized as true!" Such bursts, however, make us feel that the surrounding matter is not radiant, that it is, in part, temporary, conventional. Alas, Shakespeare had to write for the Globe Playhouse; his great soul had to crush itself, as it could, into that and no other mold. It was with him, then, as it is with us all. No man works save under conditions. The sculptor cannot set his own free thought before us, but his thought as he could translate it into the stone that was given, with the tools that were given. *Disjecta membra* are all that we find of any poet, or of any man.

Whoever looks intelligently at this Shakespeare may recognize that he too was a prophet, in his way; of an insight analogous to the prophetic, though he took it up in another strain. Nature seemed to this man also divine, unspeakable, deep as Tophet, high as Heaven: "We are such stuff as dreams are made of!" That scroll in Westminster Abbey, which few read with understanding, is of the depth of any seer. But the man sang; did not preach, except musically. We called Dante the melodious priest of Middle-Age Catholicism. May we not call Shakespeare the still more melodious priest of a true Catholicism, the "Universal Church" of the future and of all times? No narrow superstition, harsh asceticism, intolerance, fanatical fierceness or perversion, a revelation, so far as it goes, that such a thousandfold hidden

beauty and divineness dwells in all Nature, which let all men worship as they can! We may say without offense, that there rises a kind of universal psalm out of this Shakespeare too, not unfit to make itself heard among the still more sacred Psalms. Not in disharmony with these, if we understood them, but in harmony! I cannot call this Shakespeare a "skeptic," as some do, his indifference to the creeds and theological quarrels of his time misleading them. No; neither unpatriotic, though he says little about his patriotism, nor skeptic, though he says little about his faith. Such "indifference" was the fruit of his greatness withal; his whole heart was in his own grand sphere of worship (we may call it such); these other controversies, vitally important to other men, were not vital to him.

But call it worship, call it what you will, is it not a right glorious thing, and set of things, this that Shakespeare has brought us? For myself, I feel that there is actually a kind of sacredness in the fact of such a man being sent into this Earth. Is he not an eye to us all, a blessed heaven-sent Bringer of Light? And, at bottom, was it not perhaps far better that this Shakespeare, every way an unconscious man, was conscious of no Heavenly message? He did not feel, like Mahomet, because he saw into those internal splendors, that he specially was the "Prophet of God"; and was he not greater than Mahomet in that? Greater; and also, if we compute strictly, more successful. It was intrinsically an error, that notion of Mahomet's, of his supreme prophethood, and has come down to us inextricably involved in error to this day dragging along with it such a coil of fables, impurities, intolerances, as makes it a questionable step for me here and now to say, as I have done, that Mahomet was a true speaker at all, and not rather an ambitious charlatan,

perversity, and simulacrum; no speaker, but a babbler! Even in Arabia, as I compute, Mahomet will have exhausted himself and become obsolete, while this Shakespeare, this Dante may still be young, while this Shakespeare may still pretend to be a priest of mankind, of Arabia as of other places, for unlimited periods to come!

Compared with any speaker or singer one knows, even with Æschylus or Homer, why should he not, for veracity and universality, last like them? He is sincere as they; reaches deep down, like them, to the universal and perennial. But as for Mahomet, I think it had been better for him not to be so conscious! Alas, poor Mahomet; all that he was conscious of was a mere error, a futility and triviality—as indeed such ever is. The truly great in him too was the unconscious: that he was a wild Arab lion of the desert and did speak out with that great thunder-voice of his, not by words which he thought to be great, but by actions, by feelings, by a history which were great! His Koran has become a stupid piece of prolix absurdity; we do not believe, like him, that God wrote that! The Great Man here too, as always, is a Force of Nature; whatsoever is truly great in him springs up from the inarticulate deeps.

Well, this is our poor Warwickshire peasant, who rose to be manager of a playhouse so that he could live without begging; whom the Earl of Southampton cast some kind glances on; whom Sir Thomas Lucy, many thanks to him, was for sending to the Treadmill! We did not account him a god, like Odin, while he dwelt with us—on which point there were much to be said. But I will say rather, or repeat: In spite of the sad state hero-worship now lies in, consider what this Shakespeare has actually become among us. Which Englishman we ever made, in this land of ours, which million of Englishmen, would we

not give up rather than the Stratford peasant? There is no regiment of highest dignitaries that we would sell him for. He is the grandest thing we have yet done. For our honor among foreign nations, as an ornament to our English household, what item is there that we would not surrender rather than him? Consider now, if they asked us, Will you give up your Indian Empire or your Shakespeare, you English; never have had any Indian Empire, or never have had any Shakespeare? Really it were a grave question. Official persons would answer doubtless in official language; but we, for our part too, should not we be forced to answer: Indian Empire, or no Indian Empire, we cannot do without Shakespeare! Indian Empire will go, at any rate, some day, but this Shakespeare does not go; he lasts forever with us; we cannot give up our Shakespeare!

Nay, apart from spiritualities, and considering him merely as a real, marketable, tangibly-useful possession. England, before long, this island of ours, will hold but a small fraction of the English; in America, in New Holland, east and west to the very Antipodes, there will be a Saxondom covering great spaces of the globe. And now, what is it that can keep all these together into virtually one nation so that they do not fall out and fight, but live at peace, in brotherlike intercourse, helping one another? This is justly regarded as the greatest practical problem, the thing all manner of sovereignties and governments are here to accomplish; what is it that will accomplish this? Acts of Parliament, administrative prime ministers cannot. America is parted from us, so far as Parliament could part it. Call it not fantastic, for there is much reality in it: Here, I say, is an English king whom no time or chance, Parliament or combination of Parliaments, can dethrone! This King Shakespeare,

does not he shine, in crowned sovereignty, over us all, as the noblest, gentlest, yet strongest of rallying-signs; indestructible; really more valuable in that point of view than any other means or appliance whatsoever? We can fancy him as radiant aloft over all the nations of Englishmen a thousand years hence. From Paramatta, from New York, wheresoever, under what sort of parish-constable soever English men and women are, they will say to one another: "Yes, this Shakespeare is ours; we produced him; we speak and think by him; we are of one blood and kind with him." The most common sense politician, too, if he pleases, may think of that.

Yes, truly, it is a great thing for a nation that it get an articulate voice, that it produce a man who will speak forth melodiously what the heart of it means! Italy, for example, poor Italy lies dismembered, scattered asunder, not appearing in any protocol or treaty as a unity at all; yet the noble Italy is actually one. Italy produced its Dante; Italy can speak! The Czar of all the Russias, he is strong, with so many bayonets, Cossacks, and cannons, and does a great feat in keeping such a tract of earth politically together; but he cannot yet speak. Something great in him, but it is dumb greatness. He has had no voice of genius, to be heard of all men and times. He must learn to speak. He is a great dumb monster hitherto. His cannons and Cossacks will all have rusted into nonentity while that Dante's voice is still audible. The Nation that has a Dante is bound together as no dumb Russia can be.—We must here end what we had to say of the Hero-Poet.

SELF-RELIANCE [1]

Ralph Waldo Emerson

People who are maliciously asked to "sum up Emerson's system" commonly find themselves in bad straits until they run across one of Emerson's own remarks: "I need hardly say to any one acquainted with my thoughts that I have no system." Yet we sometimes wonder a bit that a man without system should have lived so systematic a life.

Emerson was born in Boston in 1803, descended from a line of clergymen associated with Boston and Concord for nearly two centuries. His grandfather as pastor occupied the Old Manse near the Concord bridge when the British troops were defeated and turned back on April 19, 1775. Emerson attended school in Boston, entered Harvard College at the age of fourteen, and was graduated in 1821. After teaching four years he entered the Harvard Divinity School, where he studied from 1825 to 1828; became pastor of the Old North Church in Boston and later of the Second Church; resigned from the latter pastorate in 1832 and formally withdrew from the ministry, though he frequently acted thereafter as ministerial supply upon invitation. After a visit to Europe, made chiefly to see four men—Landor, Carlyle, Coleridge, and Wordsworth—he settled permanently in Concord in 1834 and devoted his life to the lecture platform. He was one of the leading spirits and the most effective exponent of the Concord group of Transcendentalists. Though he gave a lifetime to teaching from the lecture platform and the press, his teachings were never crystallized into a defined body of philosophical doctrine. His influence upon the thought of our day is seen in the frequency with which he is quoted.

The *Essays* were for the most part delivered first as lectures, upon which he relied chiefly for a livelihood. His style is marked by a pithiness of sentence that reflects faithfully his mental habit. He thought in intuitive flashes and fashioned out the phrasing with the nice discrimination of the carver of cameos. He died at Concord in 1882.

> Man is his own star, and the soul that can
> Render an honest and a perfect man,
> Command all light, all influence, all fate,
> Nothing to him falls early or too late.

[1] First published in *Essays: First Series,* 1841.

Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still.

—*Epilogue to Beaumont and Fletcher's Honest Man's Fortune.*

I READ the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instil is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men—that is genius. Speak your latent conviction, and it shall be the universal sense; for the inmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato, and Milton is that they set at naught books and traditions and spoke not what men, but what they thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within more than the luster of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our rejected thoughts; they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else, tomorrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he

arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better, for worse, as his portion; that, though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact makes much impression on him, and another none. This sculpture in the memory is not without preëstablished harmony. The eye was placed where one ray should fall that it might testify of that particular ray. We but half express ourselves, and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself; every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner, not cowards fleeing before a revolution, but guides, redeemers.

and benefactors, obeying the Almighty effort, and advancing on Chaos and the Dark.

What pretty oracles nature yields us on this text in the face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces we are disconcerted. Infancy conforms to nobody; all conform to it, so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold then, he will know how to make us seniors very unnecessary.

The nonchalance of boys who are sure of a dinner and would disdain as much as a lord to do or say aught to conciliate one is the healthy attitude of human nature. A boy is in the parlor what the pit is in the playhouse; independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary way of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumbers himself never about consequences, about interests; he gives an independent, genuine verdict. You must court him; he does not court you. But the man is, as it were, clapped into jail by his consciousness. As soon as he has once acted or spoken with *éclat*, he is a committed person, watched by the sympathy or the hatred

of hundreds, whose affections must now enter into his account. There is no Lethe for this. Ah, that he could pass again into his neutrality! Who can thus lose all pledges and, having observed, observe again from the same unaffected, unbiased, unbribable, unaffrighted innocence must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private, but necessary, would sink like darts into the ear of men, and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company in which the members agree, for the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man must be a nonconformist. He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself, and you shall have the suffrage of the world. I remember an answer which when quite young I was prompted to make to a valued adviser who was wont to importune me with the dear old doctrines of the church. On my saying, What have I to do with the sacredness of traditions, if I live wholly from within? my friend suggested, "But these impulses may be from below, not from above." I replied, "They do not seem to me to be such; but if I am the Devil's child, I will live then from the Devil." No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this; the only right

is what is after my constitution; the only wrong, what is against it. A man is to carry himself in the presence of all opposition as if everything were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of abolition, and comes to me with his last news from Barbadoes, why should I not say to him, "Go love thy infant; love thy wood-chopper; be good-natured and modest; have that grace, and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home." Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some edge to it, else it is none. The doctrine of hatred must be preached as the counteraction of the doctrine of love when that pules and whines. I shun father and mother and wife and brother when my genius calls me. I would write on the lintels of the door-post, "Whim." I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then again, do not tell me, as a good man did today, of my obligation to put all poor men in good situations. Are they *my* poor? I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison, if need be; but your miscellaneous popular

charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots, and the thousandfold relief societies; —though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man and his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world, as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it to be sound and sweet, and not to need diet and bleeding. I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder, because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in

solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

The objection to conforming to usages that have become dead to you is that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible Society, vote with a great party either for the Government or against it, spread your table like base housekeepers—under all these screens I have difficulty to detect the precise man you are, and, of course, so much force is withdrawn from your proper life. But do your work, and I shall know you. Do your work, and you shall reinforce yourself. A man must consider what a blindman's-buff is this game of conformity. If I know your sect, I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know, that with all this ostentation of examining the grounds of the institution, he will do no such thing? Do I not know that he is pledged to himself not to look but at one side, the permitted side, not as a man, but as a parish minister? He is a retained attorney, and these airs of the bench are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief and attached themselves to some one of these communities of opinion. This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four is not the real four, so that every word they say chagrins us, and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-

uniform of the party to which we adhere. We come to wear one cut of face and figure and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular, which does not fail to wreck itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we do not feel at ease in answer to conversation which does not interest us. The muscles, not spontaneously moved but moved by a low usurping wilfulness, grow tight about the outline of the face with the most disagreeable sensation.

For nonconformity the world whips you with its displeasure. And therefore a man must know how to estimate a sour face. The bystanders look askance on him in the public street or in the friend's parlor. If this aversion had its origin in contempt and resistance like his own, he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs. Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid, as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror that scares us from self-trust is our consistency, a reverence for our past act or word because the eyes of others have no other data for computing our

orbit than our past acts, and we are loath to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself; what then? It seems to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present and live ever in a new day. Trust your emotion. In your metaphysics you have denied personality to the Deity, yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words, and tomorrow speak what tomorrow thinks in hard words again, though it contradict everything you said today. "Ah, so you shall be sure to be misunderstood." Is it so bad, then, to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature. All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes and Himmaleh are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or

Alexandrian stanza; read it forward, backward, or across, it still spells the same thing. In this pleasing contrite wood-life, which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found symmetrical, though I mean it not and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks. See the line from a sufficient distance, and it straightens itself to the average tendency. Your genuine action will explain itself and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough today to do right and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances and you always may. The force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed an united

light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's voice, and dignity into Washington's port, and America into Adams's eye. Honor is venerable to us because it is no ephemeris. It is always ancient virtue. We worship it today because it is not of today. We love it and pay it homage, because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times and hurl in the face of custom, and trade, and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works, that a true man belongs to no other time or place, but is the center of things. Where he is, there is nature. He measures you and all men and all events. Ordinarily, everybody in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much that he must make all circumstances indifferent. Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design; and posterity seem to follow his steps as a train of clients. A man Cæsar is

born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson. Scipio, Milton called "the height of Rome"; and all history resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper, in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, or a costly book have an alien and forbidding air, much like a gay equipage, and seem to say like that, "Who are you, sir?" Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict; it is not to command me, but I am to settle its claim to praise. That popular fable of the sot who was picked up dead drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like the duke, and assured that he had been insane, owes its popularity to the fact that it symbolizes so well the state of man who is in the world a sort of sot, but now and then wakes up, exercises his reason, and finds himself a true prince.

Our reading is mendicant and sycophantic. In history our imagination plays us false. Kingdom and lordship,

power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred and Scanderbeg and Gustavus? Suppose they were virtuous, did they wear out virtue? As great a stake depends on your private act today as followed their public and renowned steps. When private men shall act with original views the luster will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a law of his own, make his own scale of men and things, and reverse theirs, pay for benefits not with money but with honor, and represent the Law in his person, was the hieroglyphic by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the trustee? What is the aboriginal self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax, without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call spontaneity or instinct. We denote this primary wisdom as intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common

origin. For the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time, from man, but one with them and proceeds obviously from the same source whence their life and being also proceed. We first share the life by which things exist, and afterwards see them as appearances in nature, and forget that we have shared their cause. Here is the foundation of action and thought. Here are the lungs of that inspiration which giveth man wisdom and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discerns between the voluntary acts of his mind and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My wilful actions and acquisitions are but roving; the idlest reverie, the faintest native emotion command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for they do not distinguish between perception and notion. They fancy that I choose to see this or that thing. But perception is not whimsical, but fatal. If I see a trait, my children will see it after me, and in course of time, all mankind, although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

The relations of the soul to the divine spirit are so

pure that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the center of the present thought; and new date and new create the whole. Whenever a mind is simple and receives a divine wisdom, old things pass away; means, teachers, texts, temples fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it—one as much as another. All things are dissolved to their center by their cause, and in the universal miracle petty and particular miracles disappear. If, therefore, a man claims to know and speak of God, and carries you backward to the phraseology of some old moldered nation in another country, in another world, believe him not. Is the acorn better than the oak which is its fullness and completion? Is the parent better than the child into whom he has cast his ripened being? Whence, then, this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light; where it is, is day; where it was, is night; and history is an impertinence and an injury if it be anything more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say, "I think," "I am," but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God today. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower

there is no more; in the leafless root there is no less. Its nature is satisfied, and it satisfies nature, in all moments alike. But man postpones or remembers; he does not live in the present, but with reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself, unless he speak the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives. We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men of talents and character they chance to see, painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered these sayings, they understand them and are willing to let the words go; for at any time they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far off remembering of the intuition. That thought, by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the footprints of any other; you

shall not see the face of man; you shall not hear any name; the way, the thought, the good, shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of vision there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea, long intervals of time, years, centuries are of no account. This which I think and feel underlay every former state of life and circumstances, as it does underlie my present, and what is called life, and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates, that the soul *becomes;* for that forever degrades the past, turns all riches to poverty, all reputation to a shame, confounds the saint with the rogue, shoves Jesus and Judas equally aside. Why, then, do we prate of self-reliance? Inasmuch as the soul is present, there will be power not confident but agent. To talk of reliance is a poor external way of speaking. Speak rather of that which relies because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must over-

power and ride all cities, nations, kings, rich men, poets who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain. Commerce, husbandry, hunting, whaling, war, eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is in nature the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable are demonstrations of the self-sufficing, and therefore self-relying soul.

Thus all concentrates; let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions by a simple declaration of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within. Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home, to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We must go alone. I like the silent church before the service begins better than any preaching. How far off, how cool, how chaste the persons look, begirt

each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood and I have all men's. Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door and say, "Come out unto us." But keep thy state; come not into their confusion. The power men possess to annoy me, I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war, and wake Thor and Woden, courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, "O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities. I shall endeavor to nourish my parents, to support my family, to be the chaste husband of one wife, but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself

any longer for you, or you. If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy that I will do strongly before the sun and moon whatever inly rejoices me, and the heart appoints. If you are noble, I will love you; if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly, but humbly and truly. It is alike your interest, and mine, and all men's, however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and if we follow the truth it will bring us out safe at last."—But so may you give these friends pain. Yes, but I cannot sell my liberty and my power to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of absolute truth; then will they justify me, and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism; and the bold sensualist will use the name of philosophy to gild his crimes. But the law of consciousness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfil your round of duties by clearing yourself in the direct, or in the reflex way. Consider whether you have satisfied your relations to father, mother, cousin, neighbor, town, cat and dog; whether any of these can upbraid you. But I may also neglect this reflex standard, and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called

duties. But if I can discharge its debts, it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction *society,* he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimperers. We are afraid of truth, afraid of fortune, afraid of death, and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force, and do lean and beg day and night continually. Our housekeeping is mendicant; our arts, our occupations, our marriages, our religion we have not chosen, but society had chosen for us. We are parlor soldiers. We shun the rugged battle of fate where strength is born.

If our young men miscarry in their first enterprise, they lose all heart. If the young merchant fails, men say he is ruined. If the finest genius studies at one of our colleges and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened, and in complaining the rest

of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who teams it, farms it, peddles, keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always, like a cat, falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days and feels no shame in not "studying a profession," for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a stoic open the resources of man and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh, born to shed healing to the nations; that he should be ashamed of our compassion, and that the moment he acts from himself, tossing the laws, the books, idolatries, and customs out of the window, we pity him no more but thank and revere him; and that teacher shall restore the life of man to splendor, and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men, in their religion, in their education, in their pursuits, their modes of living, their association, in their property, in their speculative views.

In what prayers do men allow themselves! That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity, anything less than all good, is vicious. Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and

jubilant soul. It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is theft and meanness. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg. He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the prayer of the rower kneeling with the stroke of his oar are true prayers heard throughout nature, though for cheap ends. Caratach, in Fletcher's *Bonduca,* when admonished to inquire the mind of the god Audate, replies,

> "His hidden meaning lies in our endeavors;
> Our valors are our best gods."

Another sort of false prayers are our regrets. Discontent is the want of self-reliance; it is infirmity of will. Regret calamities, if you can thereby help the sufferer; if not, attend your own work, and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly and sit down and cry for company instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide, him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him because he did not need it. We solicitously and apologetically caress and celebrate him because he held on his way and scorned our disapprobation. The gods love him because men hated him. "To the persevering mortal," said Zoroaster, "the blessed Immortals are swift."

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, "Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey." Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke, a Lavoisier, a Hutton, a Bentham, a Fourier, it imposes its classification on other men, and lo! a new system. In proportion always to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly is this apparent in creeds and churches, which are also classifications of some powerful mind acting on the elemental thought of duty, and man's relation to the Highest. Such is Calvinism, Quakerism, Swedenborgism. The pupil takes the same delight in subordinating everything to the new terminology that a girl does who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds the classification is idolized, passes for the end and not for a speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see—how you can see; "It must be somehow that you stole the light from us." They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If

they are honest and do well, presently their neat new pinfold will be too straight and low, will crack, will lean, will rot and vanish, and the immortal light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

It is for want of self-culture that the superstition of traveling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination did so by sticking fast where they were, like an axis of the earth. In manly hours we feel that duty is our place. The soul is no traveler; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still, and shall make men sensible by the expression of his countenance that he goes, the missionary of wisdom and virtue, and visits cities and men like a sovereign, and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe for the purposes of art, of study, and benevolence, so that the man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry, travels away from himself, and grows old even in youth among old things. In Thebes, in Palmyra, his will and mind have become old and dilapidated as they. He carries ruins to ruins.

Traveling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty and lose my sadness. I pack my trunk, embrace my friends, embark on the sea, and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the

Vatican and the palaces; I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

But the rage of traveling is a symptom of a deeper unsoundness affecting the whole intellectual action. The intellect is vagabond, and our system of education fosters restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the traveling of the mind? Our houses are built with foreign taste; our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties lean and follow the past and the distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric or the Gothic model? Beauty, convenience, grandeur of thought, and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him, considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate. Your own gift you can present every moment with the cumulative force of a whole life's cultivation; but of the adopted talent of another, you have only an extemporaneous half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that person has exhibited it. Where is the master who could have taught Shakespeare? Where is the master who could have instructed Franklin, or Washington,

or Bacon, or Newton? Every great man is a unique. The Scipionism of Scipio is precisely that part he could not borrow. Shakespeare will never be made by the study of Shakespeare. Do that which is assigned you and you cannot hope too much or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal chisel of Phidias, or trowel of the Egyptians, or the pen of Moses, or Dante, but different from all these. Not possibly will the soul, all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself; but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice, for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart, and thou shalt reproduce the foreworld again.

As our religion, our education, our art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves.

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not amelioration. For everything that is given, something is taken. Society acquires new arts, and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil, and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat, and an undivided twentieth of a shed to sleep under! But compare the health of the two men, and you shall see that the white man has lost his aboriginal strength. If the traveler tell us truly, strike the savage with a broad ax, and in a day or two the flesh shall unite and heal as if you struck the blow

into soft pitch, and the same blow shall send the white to his grave.

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice he does not observe; the equinox he knows as little; and the whole bright calendar of the year is without a dial in his mind. His note-books impair his memory; his libraries overload his wit; the insurance-office increases the number of accidents; and it may be a question whether machinery does not encumber; whether we have not lost by refinement some energy by a Christianity intrenched in establishments and forms, some vigor of wild virtue. For every stoic was a stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between the great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's heroes, three or four and twenty centuries ago. Not in time is the race progressive. Phocion, Socrates, Anaxagoras, Diogenes are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and, in his turn, the founder of a sect. The arts and inventions of each period are only its costume, and do not invigorate men. The harm of the improved machinery may

compensate its good. Hudson and Behring accomplished so much in their fishing-boats as to astonish Parry and Franklin, whose equipment exhausted the resources of science and art. Galileo with an opera-glass discovered a more splendid series of celestial phenomena than any one since. Columbus found the New World in an undecked boat. It is curious to see the periodical disuse and perishing of means and machinery, which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon conquered Europe by the bivouac, which consisted of falling back on naked valor and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Casas, "without abolishing our arms, magazines, commissaries, and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his hand-mill, and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation today next year die, and their experience with them.

And so the reliance on property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long, that they have come to esteem the religious, learned, and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his

property out of new respect for his nature. Especially he hates what he has, if he see that it is accidental, came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him, and merely lies there, because no revolution or no robber takes it away. But that which a man is does always by necessity acquire, and what the man acquires is living property, which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. "Thy lot or portion of life," said the Caliph Ali, "is seeking after thee; therefore be at rest from seeking after it." Our dependence on these foreign goods leads us to our slavish respect for numbers. The political parties meet in numerous conventions; the greater the concourse, and with each new uproar of announcement, The delegation from Essex! The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions, and vote, and resolve in multitude. Not so, O friends! will the God deign to enter and inhabit you, but by a method precisely the reverse. It is only as a man puts off all foreign support and stands alone that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and, in the endless mutation, thou only firm column must presently appear the upholder of all that surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and, so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a

man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune. Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancellors of God. In the Will work and acquire, and thou hast chained the wheel of Chance, and shalt sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick, or the return of your absent friend, or some other favorable event raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

FRIENDSHIP[1]

Ralph Waldo Emerson

We have a great deal more kindness than is ever spoken. Barring all the selfishness that chills like east winds the world, the whole human family is bathed with an element of love like a fine ether. How many persons we meet in houses, whom we scarcely speak to, whom yet we honor, and who honor us! How many we see in the street, or sit with in church, whom, though silently, we warmly rejoice to be with! Read the language of these wandering eyebeams. The heart knoweth.

The effect of the indulgence of this human affection is a certain cordial exhilaration. In poetry, and in common speech, the emotions of benevolence and complacency which are felt toward others are likened to the material effects of fire; so swift, or much more swift, more active, more cheering are these fine inward irradiations. From the highest degree of passionate love to the lowest degree of good will they make the sweetness of life.

Our intellectual and active powers increase with our affection. The scholar sits down to write, and all his years of meditation do not furnish him with one good thought or happy expression; but it is necessary to write a letter to a friend, and, forthwith, troops of gentle thoughts invest themselves, on every hand, with chosen words. See in any house where virtue and self-respect abide the palpitation which the approach of a stranger

[1] First published in *Essays: First Series*, 1841.

causes. A commended stranger is expected and announced, and an uneasiness between pleasure and pain invades all the hearts of a household. His arrival almost brings fear to the good hearts that would welcome him. The house is dusted, all things fly into their places, the old coat is exchanged for the new, and they must get up a dinner if they can. Of a commended stranger, only the good report is told by others, only the good and new is heard by us. He stands to us for humanity. He is what we wish. Having imagined and invested him, we ask how we should stand related in conversation and action with such a man, and are uneasy with fear. The same idea exalts conversation with him. We talk better than we are wont. We have the nimblest fancy, a richer memory, and our dumb devil has taken leave for the time. For long hours we can continue a series of sincere, graceful, rich communications, drawn from the oldest, secretest experience, so that they who sit by, of our own kinsfolk and acquaintance, shall feel a lively surprise at our unusual powers. But as soon as the stranger begins to intrude his partialities, his definitions, his defects, into the conversation, it is all over. He has heard the first, the last and best, he will ever hear from us. He is no stranger now. Vulgarity, ignorance, misapprehension are old acquaintances. Now, when he comes, he may get the order, the dress, and the dinner, but the throbbing of the heart, and the communications of the soul, no more.

What is so pleasant as these jets of affection which relume a young world for me again? What is so delicious as a just and firm encounter of two, in a thought, in a feeling? How beautiful, on their approach to this beating heart, the steps and forms of the gifted and the true! The moment we indulge our affections, the earth

is metamorphosed; there is no winter, and no night; all tragedies, all ennuis vanish, all duties even; nothing fills the proceeding eternity but the forms all radiant of beloved persons. Let the soul be assured that somewhere in the universe it should rejoin its friend, and it would be content and cheerful alone for a thousand years.

I awoke this morning with devout thanksgiving for my friends, the old and the new. Shall I not call God, the Beautiful, who daily showeth himself so to me in his gifts? I chide society, I embrace solitude, and yet I am not so ungrateful as not to see the wise, the lovely, and the noble-minded, as from time to time they pass my gate. Who hears me, who understands me, becomes mine—a possession for all time. Nor is nature so poor but she gives me this joy several times, and thus we weave social threads of our own, a new web of relations; and, as many thoughts in succession substantiate themselves, we shall by-and-by stand in a new world of our own creation, and no longer strangers and pilgrims in a traditionary globe. My friends have come to me unsought. The great God gave them to me. By oldest right, by the divine affinity of virtue with itself, I find them, or rather, not I, but the Deity in me and in them, both deride and cancel the thick walls of individual character, relation, age, sex, and circumstance, at which he usually connives, and now makes many one. High thanks I owe you, excellent lovers, who carry out the world for me to new and noble depths and enlarge the meaning of all my thoughts. These are new poetry of the first bard —poetry without stop—hymn, ode, and epic, poetry still flowing, Apollo and the Muses chanting still. Will these two separate themselves from me again, or some of them? I know not, but I fear it not; for my relation to them is so pure that we hold by simple affinity, and, the

genius of my life being thus social, the same affinity will exert its energy on whomsoever is as noble as these men and women, wherever I may be.

I confess to an extreme tenderness of nature on this point. It is almost dangerous to me to "crush the sweet poison of misused wine" of the affections. A new person is to me a great event and hinders me from sleep. I have had such fine fancies lately about two or three persons, as have given me delicious hours; but the joy ends in the day; it yields no fruit. Thought is not born of it; my action is very little modified. I must feel pride in my friend's accomplishments as if they were mine, and a property in his virtues. I feel as warmly when he is praised as the lover when he hears applause of his engaged maiden. We overestimate the conscience of our friend. His goodness seems better than our goodness, his nature finer, his temptations less. Everything that is his,—his name, his form, his dress, books and instruments,—fancy enhances. Our own thought sounds new and larger from his mouth.

Yet the systole and diastole of the heart are not without their analogy in the ebb and flow of love. Friendship, like the immortality of the soul, is too good to be believed. The lover, beholding his maiden, half knows that she is not verily that which he worships; and in the golden hour of friendship we are surprised with shades of suspicion and unbelief. We doubt that we bestow on our hero the virtues in which he shines, and afterward worship the form to which we have ascribed this divine inhabitation. In strictness, the soul does not respect men as it respects itself. In strict science all persons underlie the same condition of an infinite remoteness. Shall we fear to cool our love by mining for the metaphysical foundation of this Elysian temple? Shall

I not be as real as the things I see? If I am, I shall not fear to know them for what they are. Their essence is not less beautiful than their appearance, though it needs finer organs for its apprehension. The root of the plant is not unsightly to science, though for chaplets and festoons we cut the stem short. And I must hazard the production of the bald fact amid these pleasing reveries, though it should prove an Egyptian skull at our banquet. A man who stands united with his thought conceives magnificently to himself. He is conscious of a universal success, even though bought by uniform particular failures. No advantages, no powers, no gold or force can be any match for him. I cannot choose but rely on my own poverty more than on your wealth. I cannot make your consciousness tantamount to mine. Only the star dazzles; the planet has a faint, moon-like ray. I hear what you say of the admirable parts and tried temper of the party you praise, but I see well that for all his purple cloaks I shall not like him, unless he is at last a poor Greek like me. I cannot deny it, O friend, that the vast shadow of the Phenomenal includes thee, also, in its pied and painted immensity, thee, also, compared with whom all else is shadow. Thou art not Being, as Truth is, as Justice is; thou art not my soul, but a picture and effigy of that. Thou hast come to me lately, and already thou art seizing thy hat and cloak. Is it not that the soul puts forth friends, as the tree puts forth leaves, and presently, by the germination of new buds, extrudes the old leaf? The law of nature is alternation forevermore. Each electrical state superinduces the opposite. The soul environs itself with friends that it may enter into a grander self-acquaintance or solitude; and it goes alone, for a season, that it may exalt its conversation or society. This method betrays itself

along the whole history of our personal relations. The instinct of affection revives the hope of union with our mates, and the returning sense of insulation recalls us from the chase. Thus every man passes his life in the search after friendship, and if he should record his true sentiment, he might write a letter like this, to each new candidate for his love:

Dear Friend:

If I was sure of thee, sure of thy capacity, sure to match my mood with thine, I should never think again of trifles in relation to thy comings and goings. I am not very wise; my moods are quite attainable; and I respect thy genius; it is to me as yet unfathomed; yet dare I not presume in thee a perfect intelligence of me, and so thou art to me a delicious torment. Thine ever, or never.

Yet these uneasy pleasures and fine pains are for curiosity, and not for life. They are not to be indulged. This is to weave cobweb, and not cloth. Our friendships hurry to short and poor conclusions because we have made them a texture of wine and dreams instead of the tough fiber of the human heart. The laws of friendship are great, austere, and eternal, of one web with the laws of nature and of morals. But we have aimed at a swift and petty benefit, to suck a sudden sweetness. We snatch at the slowest fruit in the whole garden of God, which many summers and many winters must ripen. We seek our friend not sacredly, but with an adulterate passion which would appropriate him to ourselves. In vain. We are armed all over with subtle antagonisms, which, as soon as we meet, begin to play, and translate all poetry into stale prose. Almost all people descend to meet. All association must be a compromise, and, what is worst, the very flower and aroma of

the flower of each of the beautiful natures disappear as they approach each other. What a perpetual disappointment is actual society, even of the virtuous and gifted! After interviews have been compassed with long foresight, we must be tormented presently by baffled blows, by sudden, unseasonable apathies, by epilepsies of wit and of animal spirits, in the heyday of friendship and thought. Our faculties do not play us true, and both parties are relieved by solitude.

I ought to be equal to every relation. It makes no difference how many friends I have, and what content I can find in conversing with each, if there be one to whom I am not equal. If I have shrunk unequal from one contest instantly, the joy I find in all the rest becomes mean and cowardly. I should hate myself, if then I made my other friends my asylum.

> "The valiant warrior famoused for fight,
> After a hundred victories, once foiled,
> Is from the book of honor razed quite,
> And all the rest forgot for which he toiled."

Our impatience is thus sharply rebuked. Bashfulness and apathy are a tough husk in which a delicate organization is protected from premature ripening. It would be lost if it knew itself before any of the best souls were yet ripe enough to know and own it. Respect the *naturlangsamkeit* which hardens the ruby in a million years, and works in duration, in which Alps and Andes come and go as rainbows. The good spirit of our life has no heaven which is the price of rashness. Love, which is the essence of God, is not for levity, but for the total worth of man. Let us not have this childish luxury in our regards, but the austerest worth; let us approach

our friend with an audacious trust in the truth of his heart, in the breadth, impossible to be overturned, of his foundations.

The attractions of this subject are not to be resisted, and I leave, for the time, all account of subordinate social benefit, to speak of that select and sacred relation which is a kind of absolute, and which even leaves the language of love suspicious and common, so much is this purer, and nothing is so much divine.

I do not wish to treat friendships daintily, but with roughest courage. When they are real, they are not glass threads or frost-work, but the solidest thing we know. For now, after so many ages of experience, what do we know of nature, or of ourselves? Not one step has man taken toward the solution of the problem of his destiny. In one condemnation of folly stand the whole universe of men. But the sweet sincerity of joy and peace, which I draw from this alliance with my brother's soul, is the nut itself whereof all nature and all thought is but the husk and shell. Happy is the house that shelters a friend! It might well be built, like a festal bower or arch, to entertain him a single day. Happier, if he know the solemnity of that relation, and honor its law! He who offers himself a candidate for that covenant comes up like an Olympian to the great games where the first-born of the world are the competitors. He proposes himself for contests where Time, Want, Danger are in the lists, and he alone is victor who has truth enough in his constitution to preserve the delicacy of his beauty from the wear and tear of all these. The gifts of fortune may be present or absent, but all the hap in that contest depends on intrinsic nobleness and the contempt of trifles. There are two elements that go to the composition of friendship, each so sovereign that I can detect no superiority

in either, no reason why either should be first named. One is Truth. A friend is a person with whom I may be sincere. Before him, I may think aloud. I am arrived at last in the presence of a man so real and equal that I may drop even those undermost garments of dissimulation, courtesy, and second thought, which men never put off, and may deal with him with the simplicity and wholeness with which one chemical atom meets another. Sincerity is the luxury allowed, like diadems and authority, only to the highest rank, that being permitted to speak truth as having none above it to court or conform unto. Every man alone is sincere. At the entrance of a second person hypocrisy begins. We parry and fend the approach of our fellow-man by compliments, by gossip, by amusements, by affairs. We cover up our thought from him under a hundred folds. I knew a man who, under a certain religious frenzy, cast off this drapery, and, omitting all compliments and commonplace, spoke to the conscience of every person he encountered, and that with great insight and beauty. At first he was resisted, and all men agreed he was mad. By persisting, as indeed he could not help doing, for some time in this course, he attained to the advantage of bringing every man of his acquaintance into true relations with him. No man would think of speaking falsely with him, or of putting him off with any chat of markets or reading-rooms. But every man was constrained by so much sincerity to the like plain dealing, and what love of nature, what poetry, what symbol of truth he had, he did certainly show him. But to most of us society shows not its face and eye, but its side and its back. To stand in true relations with men in a false age is worth a fit of insanity, is it not? We can seldom go erect. Almost every man we meet requires some civility, requires to be humored; he has some fame,

some talent, some whim of religion or philanthropy in his head that is not to be questioned, and which spoils all conversation with him. But a friend is a sane man who exercises not my ingenuity, but me. My friend gives me entertainment without requiring any stipulation on my part. A friend, therefore, is a sort of paradox in nature. I who alone am, I who see nothing in nature whose existence I can affirm with equal evidence to my own, behold now the semblance of my being in all its height, variety, and curiosity reiterated in a foreign form; so that a friend may well be reckoned the masterpiece of nature.

The other element of friendship is tenderness. We are holden to men by every sort of tie, by blood, by pride, by fear, by hope, by lucre, by lust, by hate, by admiration, by every circumstance and badge and trifle, but we can scarce believe that so much character can subsist in another as to draw us by love. Can another be so blessed, and we so pure, that we can offer him tenderness? When a man becomes dear to me, I have touched the goal of fortune. I find very little written directly to the heart of this matter in books. And yet I have one text which I cannot choose but remember. My author says: "I offer myself faintly and bluntly to those whose I effectually am, and tender myself least to him to whom I am the most devoted." I wish that friendship should have feet, as well as eyes and eloquence. It must plant itself on the ground before it vaults over the moon. I wish it to be a little of a citizen before it is quite a cherub. We chide the citizen because he makes love a commodity. It is an exchange of gifts, of useful loans; it is good neighborhood; it watches with the sick; it holds the pall of the funeral; and quite loses sight of the delicacies and nobility of the relation. But though we cannot find the

god under this disguise of a sutler, yet, on the other hand, we cannot forgive the poet if he spins his thread too fine, and does not substantiate his romance by the municipal virtues of justice, punctuality, fidelity, and pity. I hate the prostitution of the name of friendship to signify modish and worldly alliances. I much prefer the company of plow-boys and tin-peddlers to the silken and perfumed amity which only celebrates its days of encounter by a frivolous display, by rides in a curricle, and dinners at the best taverns. The end of friendship is a commerce the most strict and homely that can be joined, more strict than any of which we have experience. It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days, and graceful gifts, and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution. It keeps company with the sallies of the wit and the trances of religion. We are to dignify to each other the daily needs and offices of man's life and embellish it by courage, wisdom, and unity. It should never fall into something usual and settled, but should be alert and inventive and add rhyme and reason to what was drudgery.

Friendship may be said to require natures so rare and costly, each so well-tempered, and so happily adapted, and withal so circumstanced, (for even in that particular, a poet says, love demands that the parties be altogether paired), that its satisfaction can very seldom be assured. It cannot subsist in its perfection, say some of those who are learned in this warm lore of the heart, betwixt more than two. I am not quite so strict in my terms, perhaps because I have never known so high a fellowship as others. I please my imagination more with a circle of godlike men and women variously related to each other and between whom subsists a lofty intelligence. But I

find this law of *one to one* peremptory for conversation, which is the practice and consummation of friendship. Do not mix waters too much. The best mix as ill as good and bad. You shall have very useful and cheering discourse at several times with two several men, but let all three of you come together, and you shall not have one new and hearty word. Two may talk and one may hear, but three cannot take part in a conversation of the most sincere and searching sort. In good company there is never such discourse between across the table as takes place when you leave them alone. In good company the individuals at once merge their egotism into a social soul exactly co-extensive with the several consciousnesses there present. No partialities of friend to friend, no fondnesses of brother to sister, of wife to husband, are there pertinent, but quite otherwise. Only he may then speak who can sail on the common thought of the party, and not poorly limited to his own. Now this convention, which good sense demands, destroys the high freedom of great conversation, which requires an absolute running of two souls into one.

No two men but being left alone with each other enter into simpler relations. Yet it is affinity that determines which two shall converse. Unrelated men give little joy to each other; will never suspect the latent powers of each. We talk sometimes of a great talent for conversation, as if it were a permanent property in some individuals. Conversation is an evanescent relation—no more. A man is reputed to have thought and eloquence; he cannot, for all that, say a word to his cousin or his uncle. They accuse his silence with as much reason as they would blame the insignificance of a dial in the shade. In the sun it will mark the hour. Among those who enjoy his thought he will regain his tongue.

Friendship requires that rare mean betwixt likeness and unlikeness that piques each with the presence of power and of consent in the other party. Let me be alone to the end of the world rather than that my friend should overstep by a word or a look his real sympathy. I am equally balked by antagonism and by compliance. Let him not cease an instant to be himself. The only joy I have in his being mine is that the *not mine* is *mine*. I hate, where I looked for a manly furtherance, or at least a manly resistance, to find a mush of concession. Better be a nettle in the side of your friend than his echo. The condition which high friendship demands is ability to do without it. That high office requires great and sublime parts. There must be very two before there can be very one. Let it be an alliance of two large formidable natures, mutually beheld, mutually feared, before yet they recognize the deep identity which beneath these disparities unites them.

He only is fit for this society who is magnanimous, who is sure that greatness and goodness are always economy, who is not swift to intermeddle with his fortunes. Let him not intermeddle with this. Leave to the diamond its ages to grow, nor expect to accelerate the births of the eternal. Friendship demands a religious treatment. We talk of choosing our friends, but friends are self-elected. Reverence is a great part of it. Treat your friend as a spectacle. Of course he has merits that are not yours, and that you cannot honor, if you must needs hold him close to your person. Stand aside; give those merits room; let them mount and expand. Are you the friend of your friend's buttons, or of his thought? To a great heart he will still be a stranger in a thousand particulars that he may come near in the holiest ground. Leave it to girls and boys to regard a friend as property and to

suck a short and all-confounding pleasure instead of the noblest benefits.

Let us buy our entrance to this guild by a long probation. Why should we desecrate noble and beautiful souls by intruding on them? Why insist on rash personal relations with your friend? Why go to his house, or know his mother and brother and sisters? Why be visited by him at your own? Are these things material to our covenant? Leave this touching and clawing. Let him be to me a spirit. A message, a thought, a sincerity, a glance from him I want, but not news, nor pottage. I can get politics, and chat, and neighborly conveniences from cheaper companions. Should not the society of my friend be to me poetic, pure, universal, and great as nature itself? Ought I to feel that our tie is profane in comparison with yonder bar of cloud that sleeps on the horizon, or that clump of waving grass that divides the brook? Let us not vilify but raise it to that standard. That great defying eye, that scornful beauty of his mien and action, do not pique yourself on reducing, but rather fortify and enhance. Worship his superiorities; wish him not less by a thought, but hoard and tell them all. Guard him as thy counterpart. Let him be to thee forever a sort of beautiful enemy, untamable, devoutly revered, and not a trivial conveniency to be soon outgrown and cast aside. The hues of the opal, the light of the diamond are not to be seen if the eye is too near. To my friend I write a letter, and from him I receive a letter. That seems to you a little. It suffices me. It is a spiritual gift worthy of him to give and of me to receive. It profanes nobody. In these warm lines the heart will trust itself, as it will not to the tongue, and pour out the prophecy of a godlier existence than all the annals of heroism have yet made good.

Respect so far the holy laws of this fellowship as not to prejudice its perfect flower by your impatience for its opening. We must be our own before we can be another's. There is at least this satisfaction in crime, according to the Latin proverb: you can speak to your accomplice on even terms. *Crimen quos inquinat, æquat.* To those whom we admire and love, at first we cannot. Yet the least defect of self-possession vitiates, in my judgment, the entire relation. There can never be deep peace between two spirits, never mutual respect until, in their dialogue, each stands for the whole world.

What is so great as friendship, let us carry with what grandeur of spirit we can. Let us be silent, so we may hear the whisper of the gods. Let us not interfere. Who set you to cast about what you should say to the select souls, or how to say anything to such? No matter how ingenious, no matter how graceful and bland. There are innumerable degrees of folly and wisdom, and for you to say aught is to be frivolous. Wait, and the heart shall speak. Wait until the necessary and everlasting overpowers you, until day and night avail themselves of your lips. The only reward of virtue is virtue; the only way to have a friend is to be one. You shall not come nearer a man by getting into his house. If unlike, his soul only flees the faster from you, and you shall catch never a true glance of his eye. We see the noble afar off, and they repel us; why should we intrude? Late—very late—we perceive that no arrangements, no introductions, no consuetudes or habits of society would be of any avail to establish us in such relations with them as we desire, but solely the uprise of nature in us to the same degree it is in them; then shall we meet as water with water; and if we should not meet them then, we shall not want them, for we are already they. In the last analysis, love is only

the reflection of a man's own worthiness from other men. Men have sometimes exchanged names with their friends, as if they would signify that in their friend each loved his own soul.

The higher the style we demand of friendship, of course the less easy to establish it with flesh and blood. We walk alone in the world. Friends such as we desire are dreams and fables. But a sublime hope cheers ever the faithful heart, that elsewhere, in other regions of the universal power, souls are now acting, enduring, and daring, which can love us, and which we can love. We may congratulate ourselves that the period of nonage, of follies, of blunders, and of shame, is passed in solitude, and when we are finished men, we shall grasp heroic hands in heroic hands. Only be admonished by what you already see not to strike leagues of friendship with cheap persons, where no friendship can be. Our impatience betrays us into rash and foolish alliances which no God attends. By persisting in your path, though you forfeit the little, you gain the great. You demonstrate yourself, so as to put yourself out of the reach of false relations, and you draw to you the first-born of the world, those rare pilgrims whereof only one or two wander in nature at once and before whom the vulgar great show as specters and shadows merely.

It is foolish to be afraid of making our ties too spiritual, as if so we could lose any genuine love. Whatever correction of our popular views we make from insight, nature will be sure to bear us out in, and though it seem to rob us of some joy, will repay us with a greater. Let us feel, if we will, the absolute isolation of man. We are sure that we have all in us. We go to Europe, or we pursue persons, or we read books, in the instinctive faith that these will call it out and reveal us to ourselves.

Beggars all. The persons are such as we; the Europe, an old faded garment of dead persons; the books, their ghosts. Let us drop this idolatry. Let us give over this mendicancy. Let us even bid our dearest friends farewell, and defy them, saying, "Who are you? Unhand me. I will be dependent no more." Ah! seest thou not, O brother, that thus we part only to meet again on a higher platform, and only be more each other's, because we are more our own? A friend is Janus-faced; he looks to the past and the future. He is the child of all my foregoing hours, the prophet of those to come, and the harbinger of a greater friend.

I do then with my friends as I do with my books. I would have them where I can find them, but I seldom use them. We must have society on our own terms, and admit or exclude it on the slightest cause. I cannot afford to speak much with my friend. If he is great, he makes me so great that I cannot descend to converse. In the great days presentiments hover before me, far before me in the firmament. I ought then to dedicate myself to them. I go in that I may seize them; I go out that I may seize them. I fear only that I may lose them receding into the sky in which now they are only a patch of brighter light. Then, though I prize my friends, I cannot afford to talk with them and study their visions, lest I lose my own. It would indeed give me a certain household joy to quit this lofty seeking, this spiritual astronomy, or search of stars, and come down to warm sympathies with you; but then I know well I shall mourn always the vanishing of my mighty gods. It is true, next week I shall have languid moods when I can well afford to occupy myself with foreign objects; then I shall regret the lost literature of your mind, and wish you were by my side again. But if you come, perhaps you will fill my mind only with new

visions, not with yourself but with your lusters, and I shall not be able any more than now to converse with you. So I will owe to my friends this evanescent intercourse. I will receive from them, not what they have, but what they are. They shall give me that which properly they cannot give, but which emanates from them. But they shall not hold me by any relations less subtile and pure. We will meet as though we met not, and part as though we parted not.

It has seemed to me lately more possible than I knew, to carry a friendship greatly, on one side, without due correspondence on the other. Why should I cumber myself with regrets that the receiver is not capacious? It never troubles the sun that some of his rays fall wide and vain into ungrateful space, and only a small part on the reflecting planet. Let your greatness educate the crude and cold companion. If he is unequal, he will presently pass away; but thou art enlarged by thy own shining, and, no longer a mate for frogs and worms, dost soar and burn with the gods of the empyrean. It is thought a disgrace to love unrequited. But the great will see that true love cannot be unrequited. True love transcends the unworthy object, and dwells and broods on the eternal, and when the poor interposed mask crumbles, it is not sad, but feels rid of so much earth, and feels its independency the surer. Yet these things may hardly be said without a sort of treachery to the relation. The essence of friendship is entireness, a total magnanimity and trust. It must not surmise or provide for infirmity. It treats its object as a god that it may deify both.

ON STYLE IN WRITING[1]

Henry David Thoreau

Lowell said Thoreau "watched Nature like a detective who is to go upon the stand." But surely with more affection! Indeed Thoreau, our foremost literary naturalist, was perhaps also our nearest likeness to a Greek in spirit, because of his spontaneous love of nature and his power to find human values in natural living. One of the New England Transcendentalists, he never wandered long from Concord, Massachusetts, where he was born in 1817, and where he died in 1862. But Concord and its vicinity afforded him the background for meditations which have universal validity. But he was not so much a dreamer, however, as he was a close and discriminating observer. Believing that a man is rich in proportion to the number of things he can do without, he reduced his physical needs to their lowest terms; he worked at teaching school, land-surveying, carpentry, and pencil-making only enough to supply those reduced needs, and lived a contemplative life, recording his thoughts in a journal over a period of twenty-five years. From this Journal he prepared his *A Week on the Concord and Merrimac Rivers* and *Walden,* the two most deservedly popular of his books. Emerson and others later edited from the Journal a few volumes, among them *The Maine Woods, Excursions in Field and Forest,* and *Cape Cod.* They are delightful, charming, thoughtful.

A PERFECTLY healthy sentence, it is true, is extremely rare. For the most part we miss the hue and fragrance of the thought, as if we could be satisfied with the dews of the morning or evening without their colors, or the heavens without their azure. The most attractive sentences are, perhaps, not the wisest, but the surest and roundest. They are spoken firmly and conclusively, as if the speaker had a right to know what he says, and, if not wise, they have at least been well learned. Sir Walter Raleigh might well be studied, if only for the excellence

[1] An extract from *A Week on the Concord and Merrimack Rivers,* 1848, "Sunday."

of his style, for he is remarkable in the midst of so many masters. There is a natural emphasis in his style, like a man's tread, and a breathing space between the sentences, which the best of modern writing does not furnish. His chapters are like English parks, or say rather like a western forest, where the larger growth keeps down the underwood, and one may ride on horseback through the openings. All the distinguished writers of that period possess a greater vigor and naturalness than the more modern—for it is allowed to slander our own time—and when we read a quotation from one of them in the midst of a modern author, we seem to have come suddenly upon a greener ground, a greater depth and strength of soil. It is as if a green bough were laid across the page, and we are refreshed as by the sight of fresh grass in midwinter or early spring. You have constantly the warrant of life and experience in what you read. The little that is said is eked out by implication of the much that was done. The sentences are verdurous and blooming as evergreen and flowers because they are rooted in fact and experience, but our false and florid sentences have only the tints of flowers without their sap or roots. All men are really most attracted by the beauty of plain speech, and they even write in a florid style in imitation of this. They prefer to be misunderstood rather than to come short of its exuberance. Hussein Effendi praised the epistolary style of Ibrahim Pasha to the French traveler Botta, because of "the difficulty of understanding it." "There was," he said, "but one person at Jidda who was capable of understanding and explaining the Pasha's correspondence." A man's whole life is taxed for the least thing well done. It is its net result. Every sentence is the result of a long probation. Where shall we look for standard English but to the words of a standard man?

The word which is best said came nearest to not being spoken at all, for it is cousin to a deed which the speaker could have better done. Nay, almost it must have taken the place of a deed by some urgent necessity, even by some misfortune, so that the truest writer will be some captive knight after all. And perhaps the fates had such a design, when, having stored Raleigh so richly with the substance of life and experience, they made him a fast prisoner and compelled him to make his words his deeds and transfer to his expression the emphasis and sincerity of his action.

Men have a respect for scholarship and learning greatly out of proportion to the use they commonly serve. We are amused to read how Ben Jonson engaged that the dull masques with which the royal family and nobility were to be entertained should be "grounded upon antiquity and solid learning." Can there be any greater reproach than an idle learning? Learn to split wood, at least. The necessity of labor and conversation with many men and things to the scholar is rarely well remembered; steady labor with the hands, which engrosses the attention also, is unquestionably the best method of removing palaver and sentimentality out of one's style, both of speaking and writing. If he has worked hard from morning till night, though he may have grieved that he could not be watching the train of his thoughts during that time, yet the few hasty lines which at evening record his day's experience will be more musical and true than his freest but idle fancy could have furnished. Surely the writer is to address a world of laborers, and such therefore must be his own discipline. He will not idly dance at his work who has wood to cut and cord before night-fall in the short days of winter; but every stroke will be husbanded, and ring soberly through the wood; and so will the strokes

of that scholar's pen, which at evening record the story of the day, ring soberly, yet cheerily, on the ear of the reader long after the echoes of his axe have died away. The scholar may be sure that he writes the tougher truth for the callouses on his palms. They give firmness to the sentence. Indeed, the mind never makes a great and successful effort without a corresponding energy of the body. We are often struck by the force and precision of style to which hard-working men, unpracticed in writing, easily attain when required to make the effort. As if plainness and vigor and sincerity, the ornaments of style, were better learned on the farm and in the workshop than in the schools. The sentences written by such rude hands are nervous and tough, like hardened thongs, the sinews of the deer, or the roots of the pine. As for the graces of expression, a great thought is never found in a mean dress, but though it proceed from the lips of the Woloffs, the nine Muses and the three Graces will have conspired to clothe it in fit phrase. Its education has always been liberal, and its implied wit can endow a college. The scholar might frequently emulate the propriety and emphasis of the farmer's call to his team, and confess that if that were written it would surpass his labored sentences. Whose are the truly labored sentences? From the weak and flimsy periods of the politician and literary man we are glad to turn even to the description of work, the simple record of the month's labor in the farmer's almanac, to restore our tone and spirits. A sentence should read as if its author, had he held a plough instead of a pen, could have drawn a furrow deep and straight to the end. The scholar required hard and serious labor to give an impetus to his thought. He will learn to grasp the pen firmly so, and wield it gracefully and effectively, as an axe or a sword. When we consider

the weak and nerveless periods of some literary men, who perchance in feet and inches come up to the standard of their race and are not deficient in girth also, we are amazed at the immense sacrifice of thews and sinews. What! these proportions—these bones—and this their work! Hands which could have felled an ox have hewed this fragile matter which would not have tasked a lady's fingers! Can this be a stalwart man's work, who has a marrow in his back and a tendon Achilles in his heel? They who set up the blocks of Stonehenge did somewhat, if they only laid out their strength for once and stretched themselves.

WHERE I LIVED, AND WHAT I LIVED FOR[1]

HENRY DAVID THOREAU

AT a certain season of our life we are accustomed to consider every spot as the possible site of a house. I have thus surveyed the country on every side within a dozen miles of where I live. In imagination I have bought all the farms in succession, for all were to be bought, and I knew their price. I walked over each farmer's premises, tasted his wild apples, discoursed on husbandry with him, took his farm at his price, at any price, mortgaging it to him in my mind—even put a higher price on it; took everything but a deed of it; took his word for his deed, for I dearly love to talk; cultivated it, and him too to some extent, I trust, and withdrew when I had enjoyed it long enough, leaving him to carry it on. This experience entitled me to be regarded as a sort of real-estate broker by my friends. Wherever I sat, there I might live, and the landscape radiated from me accordingly. What is a house but a *sedes,* a seat?—better if a country seat. I discovered many a site for a house not likely to be soon improved, which some might have thought too far from the village, but to my eyes the village was too far from it. Well, there I might live, I said; and there I did live, for an hour, a summer and a winter life; saw how I could let the years run off, buffet the winter through, and see the spring come in. The future inhabitants of this region, wherever they may place their

[1] From *Walden; or Life in the Woods,* 1854.

houses, may be sure that they have been anticipated. An afternoon sufficed to lay out the land into orchard, woodlot, and pasture, and to decide what fine oaks or pines should be left to stand before the door, and whence each blasted tree could be seen to the best advantage; and then I let it lie, fallow perchance, for a man is rich in proportion to the number of things which he can afford to let alone.

My imagination carried me so far that I even had the refusal of several farms—the refusal was all I wanted—but I never got my fingers burned by actual possession. The nearest that I came to actual possession was when I bought the Hollowell place, and had begun to sort my seeds, and collected materials with which to make a wheelbarrow to carry it on or off with; but before the owner gave me a deed of it, his wife—every man has such a wife—changed her mind and wished to keep it, and he offered me ten dollars to release him. Now, to speak the truth, I had but ten cents in the world, and it surpassed my arithmetic to tell, if I was that man who had ten cents, or who had a farm, or ten dollars, or all together. However, I let him keep the ten dollars and the farm too, for I had carried it far enough; or rather, to be generous, I sold him the farm for just what I gave for it, and, as he was not a rich man, made him a present of ten dollars, and still had my ten cents, and seeds, and materials for a wheelbarrow left. I found thus that I had been a rich man without any damage to my poverty. But I retained the landscape, and I have since annually carried off what it yielded without a wheelbarrow. With respect to landscapes,

> "I am monarch of all I *survey*,
> My right there is none to dispute."

I have frequently seen a poet withdraw, having enjoyed the most valuable part of a farm, while the crusty farmer supposed that he had got a few wild apples only. Why, the owner does not know it for many years when a poet has put his farm in rhyme, the most admirable kind of invisible fence, has fairly impounded it, milked it, skimmed it, and got all the cream, and left the farmer only the skimmed milk.

The real attractions of the Hollowell farm, to me, were: its complete retirement, being about two miles from the village, half a mile from the nearest neighbor, and separated from the highway by a broad field; its bounding on the river, which the owner said protected it by its fogs and frosts in the spring, though that was nothing to me; the gray color and ruinous state of the house and barn, and the dilapidated fences, which put such an interval between me and the last occupant; the hollow and lichen-covered apple trees, gnawed by rabbits, showing what kind of neighbors I should have; but above all, the recollection I had of it from my earliest voyages up the river, when the house was concealed behind a dense grove of red maples, through which I heard the house-dog bark. I was in haste to buy it, before the proprietor finished getting out some rocks, cutting down the hollow apple trees, and grubbing up some young birches which had sprung up in the pasture, or, in short, had made any more of his improvements. To enjoy these advantages I was ready to carry it on, like Atlas, to take the world on my shoulders—I never heard what compensation he received for that—and do all those things which had no other motive or excuse but that I might pay for it and be unmolested in my possession of it; for I knew all the while that it would yield the most abundant crop of the

kind I wanted if I could only afford to let it alone. But it turned out as I have said.

All that I could say, then, with respect to farming on a large scale (I have always cultivated a garden) was that I had had my seeds ready. Many think that seeds improve with age. I have no doubt that time discriminates between the good and the bad; and when at last I shall plant, I shall be less likely to be disappointed. But I would say to my fellows, once for all: as long as possible live free and uncommitted. It makes but little difference whether you are committed to a farm or the county jail.

Old Cato, whose "De Re Rustica" is my "Cultivator," says, and the only translation I have seen makes sheer nonsense of the passage, "When you think of getting a farm, turn it thus in your mind, not to buy greedily; nor spare your pains to look at it, and do not think it enough to go around it once. The oftener you go there the more it will please you, if it is good." I think I shall not buy greedily, but go round and round it as long as I live, and be buried in it first, that it may please me the more at last.

The present was my next experiment of this kind, which I purpose to describe more at length, for convenience putting the experience of two years into one. As I have said, I do not propose to write an ode to dejection, but to brag as lustily as chanticleer in the morning standing on his roost, if only to wake my neighbors up.

When first I took up my abode in the woods, that is, began to spend my nights as well as days there, which, by accident, was on Independence day, or the fourth of July, 1845, my house was not finished for winter, but was merely a defense against the rain, without plastering or chimney, the walls being of rough weather-stained

boards, with wide chinks, which made it cool at night. The upright white hewn studs and freshly planed door and window casings gave it a clean and airy look, especially in the morning, when its timbers were saturated with dew, so that I fancied that by noon some sweet gum would exude from them. To my imagination it retained throughout the day more or less of this auroral character, reminding me of a certain house on a mountain which I had visited the year before. This was an airy and unplastered cabin, fit to entertain a traveling god, and where a goddess might trail her garments. The winds which passed over my dwelling were such as sweep over the ridges of mountains, bearing the broken strains, or celestial parts only, of terrestrial music. The morning wind forever blows, the poem of creation is uninterrupted; but few are the ears that hear it. Olympus is but the outside of the earth everywhere.

The only house I had been the owner of before, if I except a boat, was a tent, which I used occasionally when making excursions in the summer, and this is still rolled up in my garret; but the boat, after passing from hand to hand, has gone down the stream of time. With this more substantial shelter about me, I had made some progress toward settling in the world. This frame, so slightly clad, was a sort of crystallization around me, and reacted on the builder. It was suggestive somewhat as a picture in outlines. I did not need to go out doors to take the air, for the atmosphere within had lost none of its freshness. It was not so much within doors as behind a door where I sat, even in the rainiest weather. The Harivansa says, "An abode without birds is like a meat without seasoning." Such was not my abode, for I found myself suddenly neighbor to the birds, not by having imprisoned one, but having caged myself near

them. I was not only nearer to some of those which commonly frequent the garden and the orchard, but to those wilder and more thrilling songsters of the forest which never, or rarely, serenade a villager: the wood-thrush, the veery, the scarlet tanager, the field-sparrow, the whippoorwill, and many others.

I was seated by the shore of a small pond, about a mile and a half south of the village of Concord and somewhat higher than it, in the midst of an extensive wood between that town and Lincoln, and about two miles south of that our only field known to fame, Concord Battle Ground; but I was so low in the woods that the opposite shore, half a mile off, like the rest, covered with wood, was my most distant horizon. For the first week, whenever I looked out on the pond, it impressed me like a tarn high up on the side of a mountain, its bottom far above the surface of other lakes, and as the sun arose, I saw it throwing off its nightly clothing of mist, and here and there, by degrees, its soft ripples or its smooth reflecting surface was revealed, while the mists, like ghosts, were stealthily withdrawing in every direction into the woods, as at the breaking up of some nocturnal conventicle. The very dew seemed to hang upon the trees later into the day than usual, as on the sides of mountains.

This small lake was of most value as a neighbor in the intervals of a gentle rain storm in August, when, both air and water being perfectly still, but the sky overcast, mid-afternoon had all the serenity of evening, and the wood-thrush sang around, and was heard from shore to shore. A lake like this is never smoother than at such a time; and, the clear portion of the air above it being shallow and darkened by clouds, the water, full of light and reflections, becomes a lower heaven itself so much the more important. From a hill top near by, where the

wood had been recently cut off, there was a pleasing vista southward across the pond, through a wide indentation in the hills which form the shore there, where their opposite sides sloping toward each other suggested a stream flowing out in that direction through a wooded valley, but stream there was none. That way I looked between and over the near green hills to some distant and higher ones in the horizon, tinged with blue. Indeed, by standing on tiptoe I could catch a glimpse of some of the peaks of the still bluer and more distant mountain ranges in the northwest, those true-blue coins from heaven's own mint, and also of some portion of the village. But in other directions, even from this point, I could not see over or beyond the woods which surrounded me. It is well to have some water in your neighborhood to give buoyancy to and float the earth. One value even of the smallest well is that when you look into it you see that earth is not continent but insular. This is as important as that it keeps butter cool. When I looked across the pond from this peak toward the Sudbury meadows, which in time of flood I distinguished elevated perhaps by a mirage in their seething valley, like a coin in a basin, all the earth beyond the pond appeared like a thin crust insulated and floated even by this small sheet of intervening water, and I was reminded that this on which I dwelt was but dry land.

Though the view from my door was still more contracted, I did not feel crowded or confined in the least. There was pasture enough for my imagination. The low shrub-oak plateau to which the opposite shore arose stretched away toward the prairies of the West and the steppes of Tartary, affording ample room for all the roving families of men. "There are none happy in the world but beings who enjoy freely a vast horizon," said

Damodara, when his herds required new and larger pastures.

Both place and time were changed, and I dwelt nearer to those parts of the universe and to those eras in history which had most attracted me. Where I lived was as far off as many a region viewed nightly by astronomers. We are wont to imagine rare and delectable places in some remote and more celestial corner of the system, behind the constellation of Cassiopeia's Chair, far from noise and disturbance. I discovered that my house actually had its site in such a withdrawn, but forever new and unprofaned, part of the universe. If it were worth the while to settle in those parts near to the Pleiades or the Hyades, to Aldebaran or Altair, then I was really there, or at an equal remoteness from the life which I had left behind, dwindled and twinkling with as fine a ray to my nearest neighbor, and to be seen only in moonless nights by him. Such was that part of creation where I had squatted:

> "There was a shepherd that did live,
> And held his thoughts as high
> As were the mounts whereon his flocks
> Did hourly feed him by."

What should we think of the shepherd's life if his flocks always wandered to higher pastures than his thoughts?

Every morning was a cheerful invitation to make my life of equal simplicity, and I may say innocence, with Nature herself. I have been as sincere a worshiper of Aurora as the Greeks. I got up early and bathed in the pond; that was a religious exercise, and one of the best things which I did. They say that characters were engraven on the bathing tub of King Tching-thang to this effect: "Renew thyself completely each day; do it again

and again, and forever again." I can understand that. Morning brings back the heroic ages. I was as much affected by the faint hum of a mosquito making its invisible and unimaginable tour through my apartments at earliest dawn, when I was sitting with door and windows open, as I could be by any trumpet that ever sang of fame. It was Homer's requiem; itself an Iliad and Odyssey in the air, singing its own wrath and wanderings. There was something cosmical about it, a standing advertisement, till forbidden, of the everlasting vigor and fertility of the world. The morning, which is the most memorable season of the day, is the awakening hour. Then there is least somnolence in us; and for an hour, at least, some part of us awakes which slumbers all the rest of the day and night. Little is to be expected of that day, if it can be called a day, to which we are not awakened by our Genius, but by the mechanical nudgings of some servitor, are not awakened by our own newly-acquired force and aspirations from within, accompanied by the undulations of celestial music, instead of factory bells, and a fragrance filling the air—to a higher life than we fell asleep from; and thus the darkness bears its fruit, and proves itself to be good, no less than the light. That man who does not believe that each day contains an earlier, more sacred, and auroral hour than he has yet profaned has despaired of life, and is pursuing a descending and darkening way. After a partial cessation of his sensuous life, the soul of man, or its organs rather, are reinvigorated each day, and his Genius tries again what noble life it can make. All memorable events, I should say, transpire in morning time and in a morning atmosphere. The Vedas say, "All intelligences awake with the morning." Poetry and art and the fairest and most memorable of the actions of men date from such an hour. All poets and heroes, like Mem-

non, are the children of Aurora and emit their music at sunrise. To him whose elastic and vigorous thought keeps pace with the sun the day is a perpetual morning. It matters not what the clocks say or the attitudes and labors of men. Morning is when I am awake and there is a dawn in me. Moral reform is the effort to throw off sleep. Why is it that men give so poor an account of their day if they have not been slumbering? They are not such poor calculators. If they had not been overcome with drowsiness they would have performed something. The millions are awake enough for physical labor; but only one in a million is awake enough for effective intellectual exertion, only one in a hundred millions to a poetic or divine life. To be awake is to be alive. I have never yet met a man who was quite awake. How could I have looked him in the face?

We must learn to reawaken and keep ourselves awake, not by mechanical aids, but by an infinite expectation of the dawn, which does not forsake us in our soundest sleep. I know of no more encouraging fact than the unquestionable ability of man to elevate his life by a conscious endeavor. It is something to be able to paint a particular picture, or to carve a statue, and so to make a few objects beautiful; but it is far more glorious to carve and paint the very atmosphere and medium through which we look, which morally we can do. To affect the quality of the day, that is the highest of arts. Every man is tasked to make his life, even in its details, worthy of the contemplation of his most elevated and critical hour. If we refused, or rather used up, such paltry information as we get, the oracles would distinctly inform us how this might be done.

I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see if

I could not learn what it had to teach, and not, when I came to die, discover that I had not lived. I did not wish to live what was not life, living is so dear; nor did I wish to practise resignation, unless it was quite necessary. I wanted to live deep and suck out all the marrow of life, to live so sturdily and Spartan-like as to put to rout all that was not life, to cut a broad swath and shave close, to drive life into a corner, and reduce it to its lowest terms, and, if it proved to be mean, why then to get the whole and genuine meanness of it, and publish its meanness to the world; or if it were sublime, to know it by experience, and be able to give a true account of it in my next excursion. For most men, it appears to me, are in a strange uncertainty about it, whether it is of the devil or of God, and have somewhat hastily concluded that it is the chief end of man here to "glorify God and enjoy him forever."

Still we live meanly, like ants, though the fable tells us that we were long ago changed into men; like pygmies we fight with cranes; it is error upon error, and clout upon clout, and our best virtue has for its occasion a superfluous and evitable wretchedness. Our life is frittered away by detail. An honest man has hardly need to count more than his ten fingers, or in extreme cases he may add his ten toes, and lump the rest. Simplicity, simplicity, simplicity! I say, let your affairs be as two or three, and not a hundred or a thousand; instead of a million count half a dozen, and keep your accounts on your thumb nail. In the midst of this chopping sea of civilized life, such are the clouds and storms and quicksands and thousand-and-one items to be allowed for, that a man has to live, if he would not founder and go to the bottom and not make his port at all, by dead reckoning, and he must be a great calculator indeed who suc-

ceeds. Simplify, simplify. Instead of three meals a day, if it be necessary eat but one; instead of a hundred dishes, five; and reduce other things in proportion. Our life is like a German Confederacy, made up of petty states, with its boundary forever fluctuating so that even a German cannot tell you how it is bounded at any moment. The nation itself, with all its so-called internal improvements, which, by the way, are all external and superficial, is just such an unwieldy and overgrown establishment, cluttered with furniture and tripped up by its own traps, ruined by luxury and heedless expense, by want of calculation and a worthy aim, as the million households in the land; and the only cure for it, as for them, is in a rigid economy, a stern and more than Spartan simplicity of life and elevation of purpose. It lives too fast. Men think that it is essential that the nation have commerce, and export ice, and talk through a telegraph, and ride thirty miles an hour, without a doubt, whether they do or not; but whether we should live like baboons or like men is a little uncertain. If we do not get out sleepers, and forge rails, and devote days and nights to the work, but go to tinkering upon our lives to improve them, who will build railroads? And if railroads are not built, how shall we get to heaven in season? But if we stay at home and mind our business, who will want railroads? We do not ride on the railroad; it rides upon us. Did you ever think what those sleepers are that underlie the railroad? Each one is a man, an Irishman, or a Yankee man. The rails are laid on them, and they are covered with sand, and the cars run smoothly over them. They are sound sleepers, I assure you. And every few years a new lot is laid down and run over; so that, if some have the pleasure of riding on a rail, others have the misfortune to be ridden upon. And when they run over a man that is walking in his

sleep, a supernumerary sleeper in the wrong position, and wake him up, they suddenly stop the cars and make a hue and cry about it, as if this were an exception. I am glad to know that it takes a gang of men for every five miles to keep the sleepers down and level in their beds as it is, for this is a sign that they may sometime get up again.

Why should we live with such hurry and waste of life? We are determined to be starved before we are hungry. Men say that a stitch in time saves nine, and so they take a thousand stitches today to save nine tomorrow. As for work, we haven't any of any consequence. We have the Saint Vitus's dance, and cannot possibly keep our heads still. If I should only give a few pulls at the parish bell-rope, as for a fire, that is, without setting the bell, there is hardly a man on his farm in the outskirts of Concord, notwithstanding that press of engagements which was his excuse so many times this morning, nor a boy, nor a woman, I might almost say, but would forsake all and follow that sound, not mainly to save property from the flames, but, if we will confess the truth, much more to see it burn, since burn it must, and we, be it known, did not set it on fire—or to see it put out, and have a hand in it, if that is done as handsomely; yes, even if it were the parish church itself. Hardly a man takes a half hour's nap after dinner but when he wakes he holds up his head and asks, "What's the news?" as if the rest of mankind had stood his sentinels. Some give directions to be waked every half hour, doubtless for no other purpose; and then, to pay for it, they tell what they have dreamed. After a night's sleep the news is as indispensable as the breakfast. "Pray tell me anything new that has happened to a man anywhere on this globe," and he reads it over his coffee and rolls that a man has had his eyes gouged out this morning on the Wachito River,

never dreaming the while that he lives in the dark unfathomed mammoth cave of this world and has but the rudiment of an eye himself.

For my part, I could easily do without the postoffice. I think that there are very few important communications made through it. To speak critically, I never received more than one or two letters in my life—I wrote this some years ago—that were worth the postage. The penny-post is, commonly, an institution through which you seriously offer a man that penny for his thoughts which is too often safely offered in jest. And I am sure that I never read any memorable news in a newspaper. If we read of one man robbed, or murdered, or killed by accident, or one house burned, or one vessel wrecked, or one steamboat blown up, or one cow run over on the Western Railroad, or one mad dog killed, or one lot of grasshoppers in the winter, we never need read of another. One is enough. If you are acquainted with the principle, what do you care for a myriad instances and applications? To a philosopher all *news,* as it is called, is gossip, and they who edit and read it are old women over their tea. Yet not a few are greedy after this gossip. There was such a rush, as I hear, the other day at one of the offices to learn the foreign news by the last arrival that several large squares of plate glass belonging to the establishment were broken by the pressure, news which I seriously think a ready wit might write a twelvemonth, or twelve years, beforehand with sufficient accuracy. As for Spain, for instance, if you know how to throw in Don Carlos and the Infanta, and Don Pedro and Seville and Granada, from time to time in the right proportions—they may have changed the names a little since I saw the papers—and serve up a bull-fight when other entertainments fail, it will be true to the letter, and give us as good an idea

of the exact state or ruin of things in Spain as the most succinct and lucid reports under this head in the newspapers; and as for England, almost the last significant scrap of news from that quarter was the revolution of 1649; and if you have learned the history of her crops for an average year, you never need attend to that thing again, unless your speculations are of a merely pecuniary character. If one may judge who rarely looks into the newspapers, nothing new does ever happen in foreign parts, a French revolution not excepted.

What news! how much more important to know what that is which was never old! "Kieou-he-yu (great dignitary of the state of Wei) sent a man to Khoung-tseu to know his news. Khoung-tseu caused the messenger to be seated near him, and questioned him in these terms: What is your master doing? The messenger answered with respect: My master desires to diminish the number of his faults, but he cannot come to the end of them. The messenger being gone, the philosopher remarked: What a worthy messenger! What a worthy messenger!" The preacher, instead of vexing the ears of drowsy farmers on their day of rest at the end of the week—for Sunday is the fit conclusion of an ill-spent week, and not the fresh and brave beginning of a new one—with this one other draggletail of a sermon, should shout with thundering voice, "Pause! Avast! Why so seeming fast, but deadly slow?"

Shams and delusions are esteemed for soundest truths, while reality is fabulous. If men would steadily observe realities only and not allow themselves to be deluded, life, to compare it with such things as we know, would be like a fairy tale and the Arabian Nights' Entertainments. If we respected only what is inevitable and has a right to be, music and poetry would resound along the streets. When

we are unhurried and wise, we perceive that only great and worthy things have any permanent and absolute existence, that petty fears and petty pleasures are but the shadow of the reality. This is always exhilarating and sublime. By closing the eyes and slumbering, and consenting to be deceived by shows, men establish and confirm their daily life of routine and habit everywhere, which still is built on purely illusory foundations. Children, who play life, discern its true law and relations more clearly than men, who fail to live it worthily, but who think that they are wiser by experience, that is, by failure. I have read in a Hindoo book, that "there was a king's son, who, being expelled in infancy from his native city, was brought up by a forester, and, growing up to maturity in that state, imagined himself to belong to the barbarous race with which he lived. One of his father's ministers, having discovered him, revealed to him what he was, and the misconception of his character was removed, and he knew himself to be a prince." "So the soul," continues the Hindoo philosopher, "from the circumstances in which it is placed, mistakes its own character, until the truth is revealed to it by some holy teacher, and then it knows itself to be *Brahm*." I perceive that we inhabitants of New England live this mean life that we do because our vision does not penetrate the surface of things. (We think that that *is* which *appears* to be.) If a man should walk through this town and see only the reality, where, think you, would the "Mill-dam" go to? If he should give us an account of the realities he beheld there, we should not recognize the place in his description. Look at a meeting-house, or a court-house, or a jail, or a shop, or a dwelling-house, and say what that thing really is before a true gaze, and they would all go to pieces in your account of them. Men esteem truth remote, in the

outskirts of the system, behind the farthest star, before Adam and after the last man. In eternity there is indeed something true and sublime. But all these times and places and occasions are now and here. God himself culminates in the present moment, and will never be more divine in the lapse of all the ages. And we are enabled to apprehend at all what is sublime and noble only by the perpetual instilling and drenching of the reality that surrounds us. The universe constantly and obediently answers to our conceptions; whether we travel fast or slow, the track is laid for us. Let us spend our lives in conceiving them. The poet or the artist never yet had so fair and noble a design but some of his posterity at least could accomplish it.

Let us spend one day as deliberately as Nature, and not be thrown off the track by every nutshell and mosquito's wing that falls on the rails. Let us rise early and fast, or breakfast gently and without perturbation; let company come and let company go, let the bells ring and the children cry—determined to make a day of it. Why should we knock under and go with the stream? Let us not be upset and overwhelmed in that terrible rapid and whirlpool called a dinner, situated in the meridian shallows. Weather this danger and you are safe, for the rest of the way is down hill. With unrelaxed nerves, with morning vigor, sail by it, looking another way, tied to the mast like Ulysses. If the engine whistles, let it whistle till it is hoarse for its pains. If the bell rings, why should we run? We will consider what kind of music they are like. Let us settle ourselves and work and wedge our feet downward through the mud and slush of opinion, and prejudice, and tradition, and delusion, and appearances, that alluvion which covers the globe, through Paris and London, through New York and Boston and Concord,

through church and state, through poetry and philosophy and religion, till we come to a hard bottom and rocks in place, which we can call reality, and say, This is, and no mistake; and then begin, having a *point d'appui,* below freshet and frost and fire, a place where you might found a wall or a state, or set a lamp-post safely, or perhaps a gauge, not a nilometer, but a "realometer," that future ages might know how deep a freshet of shams and appearances had gathered from time to time. If you stand right fronting and face to face to a fact, you will see the sun glimmer on both its surfaces, as if it were a cimeter, and feel its sweet edge dividing you through the heart and marrow, and so you will happily conclude your mortal career. Be it life or death, we crave only reality. If we are really dying, let us hear the rattle in our throats and feel cold in the extremities; if we are alive, let us go about our business.

Time is but the stream I go a-fishing in. I drink at it; but while I drink I see the sandy bottom and detect how shallow it is. Its thin current slides away, but eternity remains. I would drink deeper; fish in the sky, whose bottom is pebbly with stars. I cannot count one. I know not the first letter of the alphabet. I have always been regretting that I was not as wise as the day I was born. The intellect is a cleaver; it discerns and rifts its way into the secret of things. I do not wish to be any more busy with my hands than is necessary. My head is hands and feet. I feel all my best faculties concentrated in it. My instinct tells me that my head is an organ for burrowing, as some creatures use their snout and fore-paws, and with it I would mine and burrow my way through these hills. I think that the richest vein is somewhat hereabouts; so by the divining rod and thin rising vapors I judge; and here I will begin to mine.

TRAFFIC[1]

John Ruskin

John Ruskin, the only child of John James Ruskin, a wealthy wine-merchant, was born in London in 1819. His father, who was fond of good pictures and good books, gave the boy ample opportunity to develop an appreciation for both. He entered Christ Church, Oxford, in 1836. Ill health protracted his stay at Oxford, but he took his degree in 1842. Although his original intention was to enter the Church, he turned to the writing of literature. He became professor in the Cambridge School of Art, lecturer in Cambridge University, and professor of fine art in Oxford University; in addition to these things and to being founder of the Guild of St. George he was the author of over eighty books. In nearly every book he presented the teaching that "life without industry is guilt," and "industry without art is brutality."

His first work of any importance was an extended essay on *The Poetry of Architecture,* written when he was eighteen, and his last, before his death in 1900, a *Letter on Icelandic Industries,* when he was seventy-one. For what he considered to be social betterment, he spent a fortune left him by his millionaire father; and when his "collected works" were published he permitted only those books to be included which were definitely committed to his doctrine of art for life's sake. Though he was a great teacher, he was a somewhat impractical one, for he thought it not impossible that his pupils at Oxford and in the schools which he established in London and up in the Lake country might be so instructed as to see and learn only that which "the consent of the past has admitted to be beautiful and the experience of the past has ascertained to be true." By his contemporaries, Tennyson, Arnold, Browning, Sydney Smith, Wordsworth, Huxley, Tyndall, and Carlyle, he was carefully read, not for his brilliant word-painting, but for the fundamental brain work they found in his books. Mazzini once said that Ruskin had "the most analytic mind in Europe." The books of Ruskin more read than any others have been *Modern Painters, Stones of Venice,* and *Seven Lamps of Architecture.* Probably those which will endure longest, however, will be *The Two Paths, Unto This Last, Fors Clavigera,* and *Praeterita,* for in these their author did what is almost unique in literature, namely, took down, as it were, the four walls of his mind, and spoke from his inner spirit, in most

[1] Delivered in the Town Hall, Bradford, April 21, 1864; later published in the volume entitled *The Crown of Wild Olives.*

of them letting the reader feel as if he were hearing the author think aloud. Ruskin's style was always clear and luminous, of a highly poetic nature, and full of both energy and delicacy; yet it varied from being in his early days somewhat declamatory, emphatic, and strident, to his latest style of simple and almost artless expression.

My good Yorkshire friends, you asked me down here among your hills that I might talk to you about this Exchange you are going to build; but, earnestly and seriously asking you to pardon me, I am going to do nothing of the kind. I cannot talk, or at least can say very little, about this same Exchange. I must talk of quite other things, though not willingly; I could not deserve your pardon, if, when you invited me to speak on one subject, I wilfully spoke on another. But I cannot speak, to purpose, of anything about which I do not care; and most simply and sorrowfully I have to tell you, in the outset, that I do not care about this Exchange of yours.

If, however, when you sent me your invitation, I had answered, "I won't come, I don't care about the Exchange of Bradford," you would have been justly offended with me, not knowing the reasons of so blunt a carelessness. So I have come down, hoping that you will patiently let me tell you why, on this, and many other such occasions, I now remain silent, when formerly I should have caught at the opportunity of speaking to a gracious audience.

In a word, then, I do not care about this Exchange—because you don't; and because you know perfectly well I cannot make you. Look at the essential conditions of the case, which you, as business men, know perfectly well, though perhaps you think I forget them. You are going to spend £30,000, which to you, collectively, is nothing; the buying a new coat is, as to the cost of it, a much more important matter of consideration to me, than building a new Exchange is to you. But you think you

may as well have the right thing for your money. You know there are a great many odd styles of architecture about; you don't want to do anything ridiculous; you hear of me, among others, as a respectable architectural man-milliner; and you send for me, that I may tell you the leading fashion and what is, in our shops, for the moment, the newest and sweetest thing in pinnacles.

Now, pardon me for telling you frankly, you cannot have good architecture merely by asking people's advice on occasion. All good architecture is the expression of national life and character, and it is produced by a prevalent and eager national taste, or desire for beauty. And I want you to think a little of the deep significance of this word "taste," for no statement of mine has been more earnestly or oftener controverted than that good taste is essentially a moral quality. "No," say many of my antagonists, "taste is one thing, morality is another. Tell us what is pretty—we shall be glad to know that; but we need no sermons—even were you able to preach them, which may be doubted."

Permit me, therefore, to fortify this old dogma of mine somewhat. Taste is not only a part and an index of morality; it is the ONLY morality. The first, and last, and closest trial question to any living creature is, "What do you like?" Tell me what you like, and I'll tell you what you are. Go out into the street, and ask the first man or woman you meet what their "taste" is, and, if they answer candidly, you know them, body and soul. "You, my friend in the rags, with the unsteady gait, what do you like?" "A pipe and a quartern of gin." I know you. "You, good woman, with the quick step and tidy bonnet, what do you like?" "A swept hearth, and a clean tea-table; and my husband opposite me, and a baby at my breast." Good, I know you also. "You, little girl, with

the golden hair and the soft eyes, what do you like?" "My canary, and a run among the wood hyacinths." "You, little boy with the dirty hands, and the low forehead, what do you like?" "A shy at the sparrows, and a game at pitch farthing." Good; we know them all now. What more need we ask?

"Nay," perhaps you answer; "we need rather to ask what these people and children do, than what they like. If they do right, it is no matter that they like what is wrong; and if they do wrong, it is no matter that they like what is right. Doing is the great thing; and it does not matter that the man likes drinking, so that he does not drink; nor that the little girl likes to be kind to her canary, if she will not learn her lessons; nor that the little boy likes throwing stones at the sparrows, if he goes to the Sunday school." Indeed, for a short time, and in a provisional sense, this is true. For if, resolutely, people do what is right, in time they come to like doing it. But they only are in a right moral state when they have come to like doing it; and as long as they don't like it, they are still in a vicious state. The man is not in health of body who is always thinking of the bottle in the cupboard, though he bravely bears his thirst, but the man who heartily enjoys water in the morning, and wine in the evening, each in its proper quantity and time. And the entire object of true education is to make people not merely do the right things, but enjoy the right things—not merely industrious, but to love industry—not merely learned, but to love knowledge—not merely pure, but to love purity—not merely just, but to hunger and thirst after justice.

But you may answer or think, "Is the liking for outside ornaments, for pictures, or statues, or furniture, or architecture, a moral quality?" Yes, most surely, if a rightly set

liking. Taste for any pictures or statues is not a moral quality, but taste for good ones is. Only here again we have to define the word "good." I don't mean by "good," clever, or learned, or difficult in the doing. Take a picture by Teniers of sots quarreling over their dice; it is an entirely clever picture, so clever that nothing in its kind has ever been done equal to it—but it is also an entirely base and evil picture. It is an expression of delight in the prolonged contemplation of a vile thing, and delight in that is an "unmannered," or "immoral" quality. It is "bad taste" in the profoundest sense; it is the taste of the devils. On the other hand, a picture of Titian's, or a Greek statue, or a Greek coin, or a Turner landscape expresses delight in the perpetual contemplation of a good and perfect thing. That is an entirely moral quality; it is the taste of the angels. And all delight in art, and all love of it, resolve themselves into simple love of that which deserves love. That deserving is the quality which we call "loveliness" (we ought to have an opposite word, hateliness, to be said of the things which deserve to be hated); and it is not an indifferent nor optional thing whether we love this or that; but it is just the vital function of all our being. What we like determines what we are, and is the sign of what we are; and to teach taste is inevitably to form character.

As I was thinking over this in walking up Fleet Street the other day, my eye caught the title of a book standing open in a bookseller's window. It was "On the necessity of the diffusion of taste among all classes." "Ah," I thought to myself, "my classifying friend, when you have diffused your taste, where will your classes be? The man who likes what you like belongs to the same class with you, I think. Inevitably so. You may put him to other work if you choose; but, by the condition you have brought

him into, he will dislike the other work as much as you would yourself. You get hold of a scavenger or a costermonger who enjoyed the Newgate Calendar for literature and 'Pop Goes the Weasel' for music. You think you can make him like Dante and Beethoven? I wish you joy of your lessons; but if you do, you have made a gentleman of him—he won't like to go back to his costermongering."

And so completely and unexceptionally is this so, that, if I had time to-night, I could show you that a nation cannot be affected by any vice, or weakness, without expressing it, legibly, and forever, either in bad art, or by want of art; and that there is no national virtue, small or great, which is not manifestly expressed in all the art which circumstances enable the people possessing that virtue to produce. Take, for instance, your great English virtue of enduring and patient courage. You have at present in England only one art of any consequence—that is iron-working. You know thoroughly well how to cast and hammer iron. Now do you think in those masses of lava which you build volcanic cones to melt and which you forge at the mouths of the infernos you have created; do you think, on those iron plates, your courage and endurance are not written forever, not merely with an iron pen, but on iron parchment? And take also your great English vice, European vice, vice of all the world, vice of all other worlds that roll or shine in heaven, bearing with them yet the atmosphere of hell—the vice of jealousy, which brings competition into your commerce, treachery into your councils, and dishonor into your wars —that vice which has rendered for you, and for your next neighboring nation, the daily occupations of existence no longer possible, but with the mail upon your breasts and the sword loose in its sheath; so that at last you have

realized for all the multitudes of the two great peoples who lead the so-called civilization of the earth, you have realized for them all, I say, in person and in policy, what was once true only of the rough Border riders of your Cheviot hills—

> "They carved at the meal
> With gloves of steel,
> And they drank the red wine through the helmet barr'd;—"

do you think that this national shame and dastardliness of heart are not written as legibly on every rivet of your iron armor as the strength of the right hands that forged it?

Friends, I know not whether this thing be the more ludicrous or the more melancholy. It is quite unspeakably both. Suppose, instead of being now sent for by you, I had been sent for by some private gentleman, living in a suburban house, with his garden separated only by a fruit wall from his next door neighbor's; and he had called me to consult with him on the furnishing of his drawing-room. I begin looking about me, and find the walls rather bare; I think such and such a paper might be desirable, perhaps a little fresco here and there on the ceiling, a damask curtain or so at the windows. "Ah," says my employer, "damask curtains, indeed! That's all very fine, but you know I can't afford that kind of thing just now!" "Yet the world credits you with a splendid income!" "Ah, yes," says my friend, "but do you know, at present I am obliged to spend it nearly all in steel-traps?" "Steel-traps! for whom?" "Why, for that fellow on the other side the wall, you know; we're very good friends, capital friends; but we are obliged to keep our traps set on both sides of the wall; we could not possibly keep on friendly terms without them and our

spring guns. The worst of it is, we are both clever fellows enough; and there's never a day passes that we don't find out a new trap, or a new gun-barrel, or something; we spend about fifteen millions a year each in our traps, take it altogether; and I don't see how we're to do with less." A highly comic state of life for two private gentlemen! but for two nations, it seems to me, not wholly comic. Bedlam would be comic, perhaps, if there were only one madman in it; and your Christmas pantomime is comic, when there is only one clown in it; but when the whole world turns clown, and paints itself red with its own heart's blood instead of vermilion, it is something else than comic, I think.

Mind, I know a great deal of this is play, and willingly allow for that. You don't know what to do with yourselves for a sensation; fox-hunting and cricketing will not carry you through the whole of this unendurably long mortal life; you liked pop-guns when you were schoolboys, and rifles and Armstrongs are only the same things better made; but then the worst of it is, that what was play to you when boys, was not play to the sparrows; and what is play to you now, is not play to the small birds of State neither; and for the black eagles, you are somewhat shy of taking shots at them, if I mistake not.

I must get back to the matter in hand, however. Believe me, without further instance, I could show you, in all time, that every nation's vice, or virtue, was written in its art: the soldiership of early Greece; the sensuality of late Italy; the visionary religion of Tuscany; the splendid human energy and beauty of Venice. I have no time to do this tonight (I have done it elsewhere before now); but I proceed to apply the principle to ourselves in a more searching manner.

I notice that among all the new buildings that cover your once wild hills, churches and schools are mixed in due, that is to say, in large proportion, with your mills and mansions; and I notice also that the churches and schools are almost always Gothic, and the mansions and mills are never Gothic. Will you allow me to ask precisely the meaning of this? For, remember, it is peculiarly a modern phenomenon. When Gothic was invented, houses were Gothic as well as churches; and when the Italian style superseded the Gothic, churches were Italian as well as houses. If there is a Gothic spire to the cathedral of Antwerp, there is a Gothic belfry to the Hôtel de Ville at Brussels; if Inigo Jones builds an Italian Whitehall, Sir Christopher Wren builds an Italian St. Paul's. But now you live under one school of architecture, and worship under another. What do you mean by doing this? Am I to understand that you are thinking of changing your architecture back to Gothic; and that you treat your churches experimentally, because it does not matter what mistakes you make in a church? Or am I to understand that you consider Gothic a preëminently sacred and beautiful mode of building, which you think, like the fine frankincense, should be mixed for the tabernacle only, and reserved for your religious services? For if this be the feeling, though it may seem at first as if it were graceful and reverent, you will find that, at the root of the matter, it signifies neither more nor less than that you have separated your religion from your life.

For consider what a wide significance this fact has; and remember that it is not you only, but all the people of England, who are behaving thus just now.

You have all got into the habit of calling the church "the house of God." I have seen, over the doors of many churches, the legend actually carved, "This is the house

of God, and this is the gate of heaven." Now, note where that legend comes from, and of what place it was first spoken. A boy leaves his father's house to go on a long journey on foot to visit his uncle; he has to cross a wild hill-desert, just as if one of your own boys had to cross the wolds to visit an uncle at Carlisle. The second or third day your boy finds himself somewhere between Hawes and Brough, in the midst of the moors, at sunset. It is stony ground, and boggy; he cannot go one foot further that night. Down he lies, to sleep, on Wharnside, where best he may, gathering a few of the stones together to put under his head; so wild the place is, he cannot get anything but stones. And there, lying under the broad night, he has a dream; and he sees a ladder set up on the earth, and the top of it reaches to heaven, and the angels of God are ascending and descending upon it. And when he wakes out of his sleep, he says, "How dreadful is this place; surely this is none other than the house of God, and this is the gate of heaven." This PLACE, observe; not this church; not this city; not this stone, even, which he puts up for a memorial, the piece of flint on which his head has lain. But this place; this windy slope of Wharnside; this moorland hollow, torrent-bitten, snow-blighted! this any place where God lets down the ladder. And how are you to know where that will be? or how are you to determine where it may be, but by being ready for it always? Do you know where the lightning is to fall next? You *do* know that, partly; you can guide the lightning; but you cannot guide the going forth of the Spirit, which is that lightning when it shines from the east to the west.

But the perpetual and insolent warping of that strong verse to serve a merely ecclesiastical purpose is only one of the thousand instances in which we sink back into

gross Judaism. We call our churches "temples." Now, you know perfectly well they are not temples. They have never had, never can have, anything whatever to do with temples. They are "synagogues," "gathering places," where you gather yourselves together as an assembly; and by not calling them so, you again miss the force of another mighty text: "Thou, when thou prayest, shalt not be as the hypocrites are; for they love to pray standing in the churches" [we should translate it] "that they may be seen of men. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father" which is, not in chancel nor in aisle, but "in secret."

Now, you feel, as I say this to you—I know you feel—as if I were trying to take away the honor of your churches. Not so; I am trying to prove to you the honor of your houses and your hills; not that the Church is not sacred, but that the whole Earth is. I would have you feel, what careless, what constant, what infectious sin there is in all modes of thought, whereby, in calling your churches only "holy," you call your hearths and homes "profane"; and have separated yourselves from the heathen by casting all your household gods to the ground, instead of recognizing, in the place of their many and feeble Lares, the presence of your One and Mighty Lord and Lar.

"But what has all this to do with our Exchange?" you ask me, impatiently. My dear friends, it has just everything to do with it; on these inner and great questions depend all the outer and little ones; and if you have asked me down here to speak to you because you had before been interested in anything I have written, you must know that all I have yet said about architecture was to show this. The book I called *The Seven Lamps* was

to show that certain right states of temper and moral feeling were the magic powers by which all good architecture, without exception, had been produced. *The Stones of Venice* had, from beginning to end, no other aim than to show that the Gothic architecture of Venice had arisen out of, and indicated in all its features, a state of pure national faith and of domestic virtue; and that its Renaissance architecture had arisen out of, and in all its features indicated, a state of concealed national infidelity, and of domestic corruption. And now, you ask me what style is best to build in, and how can I answer, knowing the meaning of the two styles, but by another question—do you mean to build as Christians or as infidels? And still more—do you mean to build as honest Christians or as honest infidels? as thoroughly and confessedly either one or the other? You don't like to be asked such rude questions. I cannot help it; they are of much more importance than this Exchange business; and if they can be at once answered, the Exchange business settles itself in a moment. But before I press them farther, I must ask leave to explain one point clearly.

In all my past work my endeavor has been to show that good architecture is essentially religious—the production of a faithful and virtuous, not of an infidel and corrupted people. But, in the course of doing this, I have had also to show that good architecture is not ecclesiastical. People are so apt to look upon religion as the business of the clergy, not their own, that the moment they hear of anything depending on "religion" they think it must also have depended on the priesthood; and I have had to take what place was to be occupied between these two errors, and fight both, often with seeming contradiction. Good architecture is the work of good and believing men; therefore, you say, at least some people say, "Good archi-

tecture must essentially have been the work of the clergy, not of the laity." No—a thousand times no; good architecture has always been the work of the commonalty, not of the clergy. "What," you say, "those glorious cathedrals—the pride of Europe—did their builders not form Gothic architecture?" No; they corrupted Gothic architecture. Gothic was formed in the baron's castle, and the burgher's street. It was formed by the thoughts, and hands, and powers of laboring citizens and warrior kings. By the monk it was used as an instrument for the aid of his superstition; when that superstition became a beautiful madness, and the best hearts of Europe vainly dreamed and pined in the cloister, and vainly raged and perished in the crusade, through that fury of perverted faith and wasted war the Gothic rose also to its loveliest, most fantastic, and, finally, most foolish dreams; and in those dreams was lost.

I hope, now, that there is no risk of your misunderstanding me when I come to the gist of what I want to say tonight, when I repeat: that every great national architecture has been the result and exponent of a great national religion. You can't have bits of it here, bits there; you must have it everywhere or nowhere. It is not the monopoly of a clerical company, it is not the exponent of a theological dogma, it is not the hieroglyphic writing of an initiated priesthood; it is the manly language of a people inspired by resolute and common purpose and rendering resolute and common fidelity to the legible laws of an undoubted God.

Now, there have as yet been three distinct schools of European architecture. I say, European, because Asiatic and African architectures belong so entirely to other races and climates that there is no question of them here; only, in passing, I will simply assure you that whatever is good

or great in Egypt, and Syria, and India, is just good or great for the same reasons as the buildings on our side of the Bosphorus. We Europeans, then, have had three great religions: the Greek, which was the worship of the God of Wisdom and Power; the Medieval, which was the worship of the God of Judgment and Consolation; the Renaissance, which was the worship of the God of Pride and Beauty. These three we have had; they are past; and now, at last, we English have got a fourth religion, and a God of our own, about which I want to ask you. But I must explain these three old ones first.

I repeat, first, the Greeks essentially worshiped the God of Wisdom; so that whatever contended against their religion—to the Jews a stumbling-block—was, to the Greeks, *Foolishness.*

The first Greek idea of deity was that expressed in the word, of which we keep the remnant in our words "*di*urnal" and "*di*-vine"—the god of *Day,* Jupiter the revealer. Athena is his daughter, but especially daughter of the intellect, springing armed from the head. We are only with the help of recent investigation beginning to penetrate the depth of meaning couched under the Athenaic symbols, but I may note rapidly, that her ægis, the mantle with the serpent fringes, in which she often, in the best statues, is represented as folding up her left hand, for better guard, and the Gorgon on her shield are both representative mainly of the chilling horror and sadness (turning men to stone, as it were) of the outmost and superficial spheres of knowledge—that knowledge which separates in bitterness, hardness, and sorrow the heart of the full-grown man from the heart of the child. For out of imperfect knowledge spring terror, dissension, danger, and disdain, but from perfect knowledge, given by the full-revealed Athena, strength and peace, in

sign of which she is crowned with the olive spray, and bears the resistless spear.

This, then, was the Greek conception of purest deity; and every habit of life and every form of his art developed themselves from the seeking this bright, serene, resistless wisdom and setting himself, as a man, to do things evermore rightly and strongly, not with any ardent affection or ultimate hope, but with a resolute and continent energy of will, as knowing that for failure there was no consolation, and for sin there was no remission. And the Greek architecture rose unerring, bright, clearly defined, and self-contained.

Next followed in Europe the great Christian faith, which was essentially the religion of Comfort. Its great doctrine is the remission of sins, for which cause, it happens, too often, in certain phases of Christianity, that sin and sickness themselves are partly glorified, as if the more you had to be healed of, the more divine was the healing. The practical result of this doctrine in art is a continual contemplation of sin and disease and of imaginary states of purification from them; thus we have an architecture conceived in a mingled sentiment of melancholy and aspiration, partly severe, partly luxuriant, which will bend itself to every one of our needs and every one of our fancies and be strong or weak with us, as we are strong or weak ourselves. It is, of all architecture, the basest, when base people build it; of all, the noblest, when built by the noble.

And now note that both these religions, Greek and Medieval, perished by falsehood in their own main purpose. The Greek religion of Wisdom perished in a false philosophy: "Oppositions of science, falsely so called." The Medieval religion of Consolation perished in false comfort; in remission of sins given lyingly. It was the

selling of absolution that ended the Medieval faith; and I can tell you more, it is the selling of absolution which, to the end of time, will mark false Christianity. Pure Christianity gives her remission of sins only by ending them; but false Christianity gets her remission of sins by compounding for them. And there are many ways of compounding for them. We English have beautiful little quiet ways of buying absolution, whether in low Church or high, far more cunning than any of Tetzel's trading.

Then, thirdly, there followed the religion of Pleasure, in which all Europe gave itself to luxury, ending in death. First, bals masqués in every saloon, and then guillotines in every square. And all these three worships issue in vast temple building. Your Greek worshiped Wisdom, and built you the Parthenon, the Virgin's temple. The Medieval worshiped Consolation, and built you Virgin temples also, but to our Lady of Salvation. Then the Revivalist worshiped beauty, of a sort, and built you Versailles and the Vatican. Now, lastly, will you tell me what we worship, and what we build?

You know we are speaking always of the real, active, continual, national worship, that by which men act while they live, not that which they talk of when they die. Now, we have indeed a nominal religion to which we pay tithes of property and sevenths of time; but we have also a practical and earnest religion to which we devote nine-tenths of our property and six-sevenths of our time. And we dispute a great deal about the nominal religion, but we are all unanimous about this practical one, of which I think you will admit that the ruling goddess may be best generally described as the "Goddess of Getting-on," or "Britannia of the Market." The Athenians had an "Athena Agoraia," or Athena of the Market, but she was a subordinate type of their goddess, while our Britan-

nia Agoraia is the principal type of ours. And all your great architectural works are, of course, built to her. It is long since you built a great cathedral; and how you would laugh at me if I proposed building a cathedral on the top of one of these hills of yours, taking it for an Acropolis! But your railroad mounds, vaster than the walls of Babylon; your railroad stations, vaster than the temple of Ephesus, and innumerable; your chimneys, how much more mighty and costly than cathedral spires! your harbor-piers; your warehouses; your exchanges!—all these are built to your great Goddess of "Getting-on"; and she has formed, and will continue to form, your architecture as long as you worship her; and it is quite vain to ask me to tell you how to build to her; you know far better than I.

There might, indeed, on some theories, be a conceivably good architecture for exchanges, that is to say, if there were any heroism in the fact or deed of exchange which might be typically carved on the outside of your building. For, you know, all beautiful architecture must be adorned with sculpture or painting; and for sculpture or painting you must have a subject. And hitherto it has been a received opinion among the nations of the world that the only right subjects for either were heroisms of some sort. Even on his pots and his flagons the Greek put a Hercules slaying lions, or an Apollo slaying serpents, or Bacchus slaying melancholy giants and earthborn despondencies. On his temples the Greek put contests of great warriors in founding states, or of gods with evil spirits. On his houses and temples alike the Christian put carvings of angels conquering devils, or of hero-martyrs exchanging this world for another—subject inappropriate, I think, to our manner of exchange here. And the Master of Christians not only left His followers without any orders

as to the sculpture of affairs of exchange on the outside of buildings, but gave some strong evidence of His dislike of affairs of exchange within them. And yet there might surely be a heroism in such affairs, and all commerce become a kind of selling of doves, not impious. The wonder has always been great to me, that heroism has never been supposed to be in any wise consistent with the practice of supplying people with food or clothes, but rather with that of quartering one's self upon them for food and stripping them of their clothes. Spoiling of armor is an heroic deed in all ages; but the selling of clothes, old or new, has never taken any color of magnanimity. Yet one does not see why feeding the hungry and clothing the naked should ever become base businesses, even when engaged in on a large scale. If one could contrive to attach the notion of conquest to them anyhow! so that, supposing there were anywhere an obstinate race who refused to be comforted one might take some pride in giving them compulsory comfort! and, as it were, "occupying a country" with one's gifts, instead of one's armies! If one could only consider it as much a victory to get a barren field sown as to get an eared field stripped, and contend who should build villages, instead of who should "carry" them! Are not all forms of heroism conceivable in doing these serviceable deeds? You doubt who is strongest? It might be ascertained by push of spade, as well as push of sword. Who is wisest? There are witty things to be thought of in planning other business than campaigns. Who is bravest? There are always the elements to fight with, stronger than men, and nearly as merciless.

The only absolutely and unapproachably heroic element in the soldier's work seems to be that he is paid little for it, and regularly; while you traffickers, and exchangers,

and others occupied in presumably benevolent business like to be paid much for it, and by chance. I never can make out how it is that a *knight*-errant does not expect to be paid for his trouble, but a *peddler*-errant always does; that people are willing to take hard knocks for nothing, but never to sell ribands cheap; that they are ready to go on fervent crusades to recover the tomb of a buried god, but never on any travels to fulfil the orders of a living one; that they will go anywhere barefoot to preach their faith, but must be well bribed to practise it; and are perfectly ready to give the Gospel gratis, but never the loaves and fishes.

If you chose to take the matter up on any such soldierly principle, to do your commerce, and your feeding of nations, for fixed salaries, and to be as particular about giving people the best food and the best cloth as soldiers are about giving them the best gunpowder, I could carve something for you on your Exchange worth looking at. But I can only at present suggest decorating its frieze with pendant purses and making its pillars broad at the base for the sticking of bills. And in the innermost chambers of it there might be a statue of Britannia of the Market, who may have, perhaps advisably, a partridge for her crest, typical at once of her courage in fighting for noble ideas and of her interest in game, and round its neck the inscription in golden letters: *Perdix fovit quæ non peperit.* Then, for her spear, she might have a weaver's beam; and on her shield, instead of St. George's Cross, the Milanese boar, semi-fleeced, with the town of Gennesaret proper in the field; and the legend, "In the best market," and her corslet, of leather, folded over her heart in the shape of a purse, with thirty slits in it, for a piece of money to go in at on each day of the

month. And I doubt not but that people would come to see your Exchange, and its goddess, with applause.

Nevertheless, I want to point out to you certain strange characters in this goddess of yours. She differs from the great Greek and Medieval deities essentially in two things: first, as to the continuance of her presumed power; secondly, as to the extent of it.

First, as to the continuance.

The Greek Goddess of Wisdom gave continual increase of wisdom, as the Christian Spirit of Comfort (or Comforter) continual increase of comfort. There was no question with these of any limit or cessation of function. But with your Agora Goddess that is just the most important question. Getting on—but where to? Gathering together—but how much? Do you mean to gather always—never to spend? If so, I wish you joy of your goddess, for I am just as well off as you without the trouble of worshiping her at all. But if you do not spend, somebody else will; somebody else must. And it is because of this (among many other such errors) that I have fearlessly declared your so-called science of political economy to be no science; because, namely, it has omitted the study of exactly the most important branch of the business, the study of spending. For spend you must, and as much as you make, ultimately. You gather corn; will you bury England under a heap of grain, or will you, when you have gathered, finally eat? You gather gold; will you make your house-roofs of it, or pave your streets with it? That is still one way of spending it. But if you keep it that you may get more, I'll give you more; I'll give you all the gold you want—all you can imagine—if you can tell me what you'll do with it. You shall have thousands of gold-pieces, thousands of thousands,

millions, mountains, of gold; where will you keep them? Will you put an Olympus of silver upon a golden Pelion; make Ossa like a wart? Do you think the rain and dew would then come down to you in the streams from such mountains more blessedly than they will down the mountains which God has made for you of moss and whinstone? But it is not gold that you want to gather! What is it? Greenbacks? No; not those either. What is it then? Is it ciphers after a capital I? Cannot you practise writing ciphers, and write as many as you want? Write ciphers for an hour every morning in a big book, and say every evening, "I am worth all those noughts more than I was yesterday." Won't that do? Well, what in the name of Plutus is it you want? Not gold, not greenbacks, not ciphers after a capital I? You will have to answer, after all, "No; we want, somehow or other, money's worth." Well, what is that? Let your Goddess of Getting-on discover it, and let her learn to stay therein.

Second. But there is yet another question to be asked respecting this Goddess of Getting-on. The first was of the continuance of her power; the second is of its extent.

Pallas and the Madonna were supposed to be all the world's Pallas and all the world's Madonna. They could teach all men, and they could comfort all men. But, look strictly into the nature of the power of your Goddess of Getting-on, and you will find she is the Goddess, not of everybody's getting on, but only of somebody's getting on. This is a vital, or rather deathful, distinction. Examine it in your own ideal of the state of national life which this Goddess is to evoke and maintain. I asked you what it was, when I was last here—you have never told me. Now, shall I try to tell you?

Your ideal of human life then is, I think, that it should

be passed in a pleasant undulating world, with iron and coal everywhere underneath it. On each pleasant bank of this world is to be a beautiful mansion, with two wings; and stables, and coach-houses; a moderately-sized park; a large garden and hot-houses; and pleasant carriage drives through the shrubberies. In this mansion are to live the favored votaries of the Goddess: the English gentleman, with his gracious wife and his beautiful family, always able to have the boudoir and the jewels for the wife, and the beautiful ball dresses for the daughters, and hunters for the sons, and a shooting in the Highlands for himself. At the bottom of the bank is to be the mill, not less than a quarter of a mile long, with a steam engine at each end, and two in the middle, and a chimney three hundred feet high. In this mill are to be in constant employment from eight hundred to a thousand workers, who never drink, never strike, always go to church on Sunday, and always express themselves in respectful language.

Is not that, broadly, and in the main features, the kind of thing you propose to yourselves? It is very pretty indeed seen from above; not at all so pretty, seen from below. For, observe, while to one family this deity is indeed the Goddess of Getting-on, to a thousand families she is the Goddess of not Getting-on. "Nay," you say, "they have all their chance." Yes, so has every one in a lottery, but there must always be the same number of blanks. "Ah! but in a lottery it is not skill and intelligence which take the lead, but blind chance." What then! do you think the old practice that "they should take who have the power, and they should keep who can," is less iniquitous, when the power has become power of brains instead of fist? and that, though we may not take advantage of a child's or a woman's weakness, we may

of a man's foolishness? "Nay, but finally, work must be done, and some one must be at the top, some one at the bottom." Granted, my friends. Work must always be, and captains of work must always be; and if you in the least remember the tone of any of my writings, you must know that they are thought unfit for this age because they are always insisting on need of government and speaking with scorn of liberty. But I beg you to observe that there is a wide difference between being captains or governors of work and taking the profits of it. It does not follow, because you are general of an army, that you are to take all the treasure, or land, it wins (if it fight for treasure or land); neither, because you are king of a nation, that you are to consume all the profits of the nation's work. Real kings, on the contrary, are known invariably by their doing quite the reverse of this, by their taking the least possible quantity of the nation's work for themselves. There is no test of real kinghood so infallible as that. Does the crowned creature live simply, bravely, unostentatiously? Probably he is a king. Does he cover his body with jewels, and his table with delicates? In all probability he is not a king. It is possible he may be, as Solomon was; but that is when the nation shares his splendor with him. Solomon made gold, not only to be in his own palace as stones, but to be in Jerusalem as stones. But, even so, for the most part, these splendid kinghoods expire in ruin, and only the true kinghoods live, which are of royal laborers governing loyal laborers, who, both leading rough lives, establish the true dynasties. Conclusively you will find that because you are king of a nation, it does not follow that you are to gather for yourself all the wealth of that nation; neither, because you are king of a small part of the nation, and lord over the means of its maintenance—over field, or mill, or mine

—are you to take all the produce of that piece of the foundation of national existence for yourself.

You will tell me I need not preach against these things, for I cannot mend them. No, good friends, I cannot; but you can, and you will; or something else can and will. Even good things have no abiding power; and shall these evil things persist in victorious evil? All history shows, on the contrary, that to be the exact thing they never can do. Change must come; but it is ours to determine whether change of growth, or change of death. Shall the Parthenon be in ruins on its rock, and Bolton priory in its meadow, but these mills of yours be the consummation of the buildings of the earth, and their wheels be as the wheels of eternity? Think you that "men may come, and men may go," but—mills—go on forever? Not so; out of these, better or worse shall come; and it is for you to choose which.

I know that none of this wrong is done with deliberate purpose. I know, on the contrary, that you wish your workmen well, that you do much for them, and that you desire to do more for them, if you saw your way to such benevolence safely. I know that even all this wrong and misery are brought about by a warped sense of duty, each of you striving to do his best; but, unhappily, not knowing for whom this best should be done. And all our hearts have been betrayed by the plausible impiety of the modern economist, telling us that, "To do the best for ourselves is finally to do the best for others." Friends, our great Master said not so; and most absolutely we shall find this world is not made so. Indeed, to do the best for others is finally to do the best for ourselves; but it will not do to have our eyes fixed on that issue. The Pagans had got beyond that. Hear what a Pagan says of this matter, hear what were, perhaps, the last written

words of Plato—if not the last actually written (for this we cannot know), yet assuredly in fact and power his parting words—in which, endeavoring to give full crowning and harmonious close to all his thoughts and to speak the sum of them by the imagined sentence of the Great Spirit, his strength and his heart fail him, and the words cease, broken off forever. They are at the close of the dialogue called Critias, in which he describes, partly from real tradition, partly in ideal dream, the early state of Athens, and the genesis, and order, and religion, of the fabled isle of Atlantis, in which genesis he conceives the same first perfection and final degeneracy of man, which in our own Scriptural tradition is expressed by saying that the Sons of God intermarried with the daughters of men, for he supposes the earliest race to have been indeed the children of God, and to have corrupted themselves, until "their spot was not the spot of his children." And this, he says, was the end; that indeed "through many generations, so long as the God's nature in them yet was full, they were submissive to the sacred laws, and carried themselves lovingly to all that had kindred with them in divineness, for their uttermost spirit was faithful and true, and in every wise great; so that, in all meekness of wisdom, they dealt with each other, and took all the chances of life; and, despising all things except virtue, they cared little what happened day by day and bore lightly the burden of gold and of possessions, for they saw that, if only their common love and virtue increased, all these things would be increased together with them; but to set their esteem and ardent pursuit upon material possession would be to lose that first and their virtue and affection together with it. And by such reasoning, and what of the divine nature remained in them, they gained all this greatness of which we have already told; but

when the God's part of them faded and became extinct, being mixed again and again and effaced by the prevalent mortality, and the human nature at last exceeded, they then became unable to endure the courses of fortune and fell into shapelessness of life and baseness in the sight of him who could see, having lost everything that was fairest of their honor; while to the blind hearts which could not discern the true life, tending to happiness, it seemed that they were then chiefly noble and happy, being filled with an iniquity of inordinate possession and power. Whereupon, the God of Gods, whose Kinghood is in laws, beholding a once just nation thus cast into misery, and desiring to lay such punishment upon them as might make them repent into restraining, gathered together all the gods into his dwelling-place, which from heaven's center overlooks whatever has part in creation; and having assembled them, he said—"

The rest is silence. Last words of the chief wisdom of the heathen, spoken of this idol of riches, this idol of yours, this golden image, high by measureless cubits, set up where your green fields of England are furnace-burnt into the likeness of the plain of Dura; this idol, forbidden to us, first of all idols, by our own Master and faith, forbidden to us also by every human lip that has ever, in any age or people, been accounted of as able to speak according to the purposes of God. Continue to make that forbidden deity your principal one, and soon no more art, no more science, no more pleasure will be possible. Catastrophe will come, or worse than catastrophe, slow moldering and withering into Hades. But if you can fix some conception of a true human state of life to be striven for, life, good for all men, as for yourselves; if you can determine some honest and simple order of existence, following those trodden ways of wisdom, which

are pleasantness, and seeking her quiet and withdrawn paths, which are peace;—then, and so sanctifying wealth into "commonwealth," all your art, your literature, your daily labors, your domestic affection, and citizen's duty will join and increase into one magnificent harmony. You will know then how to build well enough; you will build with stone well, but with flesh better; temples not made with hands, but riveted of hearts; and that kind of marble, crimson-veined, is indeed eternal.

AN APOLOGY FOR IDLERS[1]

Robert Louis Stevenson

Stevenson, lover of quaint and melodious words, doubtless found the name of Edinburgh musical on the lips of the true Scotchman, just as he found the old city romantic. It was his birthplace (1850) and when, in 1894, Apia, Samoa, became his death-place, that name too, at least, must have been to his liking. Between these dates stretched years of brave life, unsubdued by all his suffering. One of the most infrequent phenomena that this old world has to offer is the scholar who can appeal widely and yet not cheapen the quality or weaken the force of his material.

Stevenson's education was secured in Edinburgh University. His father and his grandfather had been lighthouse builders. He himself was called to the Scottish bar, but never practised. By heredity predisposed to weak lungs, during most of his days he moved from place to place, seeking health and the opportunity to write. From 1889 he lived in Samoa.

Stevenson was a charming and stimulating essayist, a great short-story writer, one of the best of poets for children, and a fairly successful novelist. He has been popular the world over, as an author who is both a good stylist and a good story-teller is sure to be. A favorite and fundamental idea in his essays is that one ought to get as much enjoyment out of life as possible. His short stories are picturesque, lyrical, rich in adventure. While a conventional ethics is always in the background, he never suffered convention unduly to restrict what is naturally human. His children's poems endeared him to young and old by their gentle, sunny kindliness, though other poems reveal a better gift for story-telling and a more thoughtful attitude to life. As compared with his short stories, Stevenson's novels have not retained quite the vogue in English-speaking countries that they once held, perhaps because the reader in the present day has been enticed away from the simple fascination of adventure to the sensationalism of contemporary society. Stevenson's leading essays are in *Virginibus Puerisque* and *Familiar Studies of Men and Books,* both of them early works. The titles of his short stories and novels are too well known to need mention here, though it should not be overlooked that of his novels the best, *Weir of Hermiston* and *St. Ives,* were left unfinished at his death. In nearly every one of his narratives Stevenson built the structure of the story under control of a fixed point of view,

[1] From *Virginibus Puerisque.*

though he did not hesitate to introduce an episode if it served to make more lifelike any character in the tale. The syntax of his sentences gives the impression of what Professor Palmer has called a cultivated spontaneity. His sentences are compact, yet rhythmic, their flow retarded or accelerated by the use or omission of the conjunctions *and* and *but*. He was fond of the complex, but never of the involved sentence. Though he cultivated his style in imitation of various good writers, yet the matured result is distinctively his own. He is one of the best of examples of a man, endowed with talent only, who by patient perserverance becomes a distinguished author and even an idol of the crowd.

BOSWELL: *We grow weary when idle.*
JOHNSON: *That is, sir, because others being busy, we want company; but if we were idle, there would be no growing weary; we should all entertain one another.*

JUST now, when every one is bound, under pain of a decree in absence convicting him of *lèse*-respectability, to enter on some lucrative profession, and labor therein with something not far short of enthusiasm, a cry from the opposite party who are content when they have enough, and like to look on and enjoy in the meanwhile, savors a little of bravado and gasconade. And yet this should not be. Idleness so-called, which does not consist of doing nothing, but in doing a great deal not recognized in the dogmatic formularies of the ruling class, has as good a right to state its position as industry itself. It is admitted that the presence of people who refuse to enter in the great handicap race for sixpenny pieces is at once an insult and a disenchantment for those who do. A fine fellow (as we see so many) takes his determination, votes for the sixpences, and, in the emphatic American ism, "goes for" them. And while such an one is plowing distressfully up the road, it is not hard to understand his resentment, when he perceives cool persons in the meadows by the wayside, lying with a handkerchief over their ears and a glass at their elbow. Alexander is touched in a very delicate place by the disregard of

Diogenes. Where was the glory of having taken Rome for these tumultuous barbarians who poured into the Senate house and found the Fathers sitting silent and unmoved by their success? It is a sore thing to have labored along and scaled the arduous hilltops, and, when all is done, find humanity indifferent to your achievement. Hence physicists condemn the unphysical; financiers have only a superficial toleration for those who know little of stocks; literary persons despise the unlettered; and people of all pursuits combine to disparage those who have none.

But, though this is one difficulty of the subject, it is not the greatest. You could not be put in prison for speaking against industry, but you can be sent to Coventry for speaking like a fool. The greatest difficulty with most subjects is to do them well; therefore, please to remember this is an apology. It is certain that much may be judiciously argued in favor of diligence; only there is something to be said against it, and that is what, on the present occasion, I have to say. To state one argument is not necessarily to be deaf to all others, and that a man has written a book of travels in Montenegro is no reason why he should never have been to Richmond.

It is surely beyond a doubt that people should be a good deal idle in youth. For though here and there a Lord Macaulay may escape from school honors with all his wits about him, most boys pay so dear for their medals that they never afterward have a shot in their locker, and begin the world bankrupt. And the same holds true during all the time a lad is educating himself, or suffering others to educate him. It must have been a very foolish old gentleman who addressed Johnson at Oxford in these words: "Young man, ply your book diligently now, and acquire a stock of knowledge; for when years come

upon you, you will find that poring upon books will be but an irksome task." The old gentleman seems to have been unaware that many other things besides reading grow irksome, and not a few become impossible by the time a man has to use spectacles and cannot walk without a stick. Books are good enough in their own way, but they are a mighty bloodless substitute for life. It seems a pity to sit, like the Lady of Shalott, peering into a mirror, with your back turned on all the bustle and glamor of reality. And if a man reads very hard, as the old anecdote reminds us, he will have little time for thoughts.

If you look back on your own education, I am sure it will not be the full, vivid, instructive hours of truantry that you regret; you would rather cancel some lack-luster periods between sleep and waking in the class. For my own part, I have attended a good many lectures in my time. I still remember that the spinning of a top is a case of kinetic stability. I still remember that emphyteusis is not a disease, nor stillicide a crime. But, though I would not willingly part with such scraps of science, I do not set the same store by them as by certain other odds and ends that I came by in the open street while I was playing truant. This is not the moment to dilate on that mighty place of education, which was the favorite school of Dickens and of Balzac and turns out yearly many inglorious masters in the Science of the Aspects of Life. Suffice it to say this: if a lad does not learn in the streets, it is because he has no faculty of learning. Nor is the truant always in the streets, for, if he prefers, he may go out by the gardened suburbs into the country. He may pitch on some tuft of lilacs over a burn and smoke innumerable pipes to the tune of the water on the stones. A bird will sing in the thicket. And there he

may fall into a vein of kindly thought and see things in a new perspective. Why, if this be not education, what is? We may conceive Mr. Worldly Wiseman accosting such an one and the conversation that should thereupon ensue:

"How now, young fellow, what dost thou here?"

"Truly, sir, I take mine ease."

"Is not this the hour of the class? and shouldst thou not be plying thy Book with diligence, to the end thou mayest obtain knowledge?"

"Nay, but thus also I follow after Learning, by your leave."

"Learning, quotha! After what fashion, I pray thee? Is it mathematics?"

"No, to be sure."

"Is it metaphysics?"

"Nor that."

"Is it some language?"

"Nay, it is no language."

"Is it a trade?"

"Nor a trade neither."

"Why, then, what is't?"

"Indeed, sir, as a time may soon come for me to go upon Pilgrimage, I am desirous to note what is commonly done by persons in my case, and where are the ugliest Sloughs and Thickets on the Road; as also, what manner of Staff is of the best service. Moreover, I lie here, by this water, to learn by root-of-heart a lesson which my master teaches me to call Peace, or Contentment."

Hereupon Mr. Worldly Wiseman was much commoved with passion, and, shaking his cane with a very threatful countenance, broke forth upon this wise: "Learning, quotha!" said he; "I would have all such rogues scourged by the Hangman!"

And so he would go his way, ruffling out his cravat with a crackle of starch, like a turkey when it spread its feathers.

Now this, of Mr. Wiseman's, is the common opinion. A fact is not called a fact, but a piece of gossip, as it does not fall into one of your scholastic categories. An inquiry must be in some acknowledged direction, with a name to go by, or else you are not inquiring at all, only lounging; and the workhouse is too good for you. It is supposed that all knowledge is at the bottom of a well or the far end of a telescope. Sainte-Beuve, as he grew older, came to regard all experience as a single great book in which to study for a few years ere we go hence; and it seemed all one to him whether you should read in chapter XX, which is the differential calculus, or in chapter XXXIX, which is hearing the band play in the gardens. As a matter of fact, an intelligent person, looking out of his eyes and harkening in his ears, with a smile on his face all the time, will get more true education than many another in a life of heroic vigils. There is certainly some chill and arid knowledge to be found upon the summits of formal and laborious science; but it is all round about you, and for the trouble of looking, you will acquire the warm and palpitating facts of life. While others are filling their memory with a lumber of words, one-half of which they will forget before the week be out, your truant may learn some really useful art: to play the fiddle, to know a good cigar, or to speak with ease and opportunity to all varieties of men. Many who have "plied their book diligently" and know all about some one branch or another of accepted lore come out of the study with an ancient and owl-like demeanor and prove dry, stockish, and dyspeptic in all the better and brighter parts of life. Many make a large fortune, who remain underbred and pa-

thetically stupid to the last. And meantime there goes the idler, who began life along with them—by your leave—a different picture. He has had time to take care of his health and his spirits; he has been a great deal in the open air, which is the most salutary of all things for both body and mind; and, if he has never read the great Book in very recondite places, he has dipped into it and skimmed it over to excellent purpose. Might not the student afford some Hebrew roots, and the business man some of his half-crowns, for a share of the idler's knowledge of life at large and Art of Living? Nay, and the idler has another and more important quality than these. I mean his wisdom. He who has much looked on at the childish satisfaction of other people in their hobbies will regard his own with only a very ironical indulgence. He will not be heard among the dogmatists. He will have a great and cool allowance for all sorts of people and opinions. If he finds no out-of-the-way truths, he will identify himself with no very burning falsehood. His way takes him along a by-road, not much frequented, but very even and pleasant, which is called Commonplace Lane and leads to the Belvedere of Common Sense. Thence he shall command an agreeable, if no very noble prospect; and while others behold the East and West, the Devil and the Sunrise, he will be contentedly aware of a sort of morning hour upon all sublunary things, with an army of shadows running speedily and in many different directions into the great daylight of Eternity. The shadows and the generations, the shrill doctors and the plangent wars, go by into ultimate silence and emptiness; but, underneath all this, a man may see out of the Belvedere windows much green and peaceful landscape; many firelit parlors; good people laughing, drinking, and making love as they did before the Flood or the French Revolu-

tion; and the old shepherd telling his tale under the hawthorn.

Extreme busyness, whether at school or college, kirk or market, is a symptom of deficient vitality; and a faculty for idleness implies a catholic appetite and a strong sense of personal identity. There is a sort of dead-alive, hackneyed people about, who are scarcely conscious of living except in the exercise of some conventional occupation. Bring these fellows into the country, or set them aboard ship, and you will see how they pine for their desk or their study. They have no curiosity; they cannot give themselves over to random provocations; they do not take pleasure in the exercise of their faculties for its own sake; and, unless Necessity lays about them with a stick, they will even stand still. It is no good speaking to such folk; they cannot be idle, their nature is not generous enough, and they pass those hours in a sort of coma which are not dedicated to furious moiling in the gold-mill. When they do not require to go to the office, when they are not hungry and have no mind to drink, the whole breathing world is a blank to them. If they have to wait an hour or so for a train, they fall into a stupid trance with their eyes open. To see them, you would suppose there was nothing to look at and no one to speak with; you would imagine they were paralyzed or alienated; and yet very possibly they are hard workers in their own way, and have good eyesight for a flaw in a deed or a turn of the market. They have been to school and college, but all the time they had their eye on the medal; they have gone about in the world and mixed with clever people, but all the time they were thinking of their own affairs. As if a man's soul were not too small to begin with, they have dwarfed and narrowed theirs by a life of all work and no play until here they are at forty, with a listless atten-

tion, a mind vacant of all material of amusement, and not one thought to rub against another, while they wait for the train. Before he was breeched he might have clambered on the boxes; when he was twenty he would have stared at the girls; but now the pipe is smoked out, the snuff-box empty, and my gentleman sits bolt upright upon a bench, with lamentable eyes. This does not appeal to me as being Success in Life.

But it is not only the person himself who suffers from his busy habits, but his wife and children, his friends and relations, and down to the very people he sits with in a railway carriage or an omnibus. Perpetual devotion to what a man calls his business is only to be sustained by perpetual neglect of many other things. And it is not by any means certain that a man's business is the most important thing he has to do. To an impartial estimate it will seem clear that many of the wisest, most virtuous, and most beneficent parts that are to be played upon the Theater of Life are filled by gratuitous performers, and pass, among the world at large, as phases of idleness. For in that Theater not only the walking gentlemen, singing chambermaids, and diligent fiddlers in the orchestra, but those who look on and clap their hands from the benches do really play a part and fulfil important offices toward the general result. You are no doubt very dependent on the care of your lawyer and stockbroker, of the guards and signalmen who convey you rapidly from place to place, and the policemen who walk the streets for your protection; but is there not a thought of gratitude in your heart for certain other benefactors who set you smiling when they fall in your way, or season your dinner with good company? Colonel Newcome helped to lose his friend's money; Fred Bayham had an ugly trick of borrowing shirts; and yet they were better

people to fall among than Mr. Barnes. And, though Falstaff was neither sober nor very honest, I think I could name one or two long-faced Barabbases whom the world could better have done without. Hazlitt mentions that he was more sensible of obligation to Northcote, who had never done him anything he could call a service, than to his whole circle of ostentatious friends; for he thought a good companion emphatically the greatest benefactor. I know there are people in the world who cannot feel grateful unless the favor has been done them at the cost of pain and difficulty. But this is a churlish disposition. A man may send you six sheets of letter-paper covered with the most entertaining gossip, or you may pass half an hour pleasantly, perhaps profitably, over an article of his; do you think the service would be greater if he had made the manuscript in his heart's blood, like a compact with the devil? Do you really fancy you should be more beholden to your correspondent if he had been damning you all the while for your importunity? Pleasures are more beneficial than duties because, like the quality of mercy, they are not strained, and they are twict blest. There must always be two to a kiss, and there may be a score in a jest; but wherever there is an element of sacrifice, the favor is conferred with pain, and, among generous people, received with confusion. There is no duty we so much underrate as the duty of being happy. By being happy, we sow anonymous benefits upon the world, which remain unknown even to ourselves, or, when they are disclosed, surprise nobody so much as the benefactor. The other day a ragged, barefoot boy ran down the street after a marble with so jolly an air that he set every one he passed into a good humor; one of these persons, who had been delivered from more

than usually black thoughts, stopped the little fellow and gave him some money with this remark: "You see what sometimes comes of looking pleased." If he had looked pleased before, he had now to look both pleased and mystified. For my part, I justify this encouragement of smiling rather than tearful children; I do not wish to pay for tears anywhere but upon the stage; but I am prepared to deal largely in the opposite commodity. A happy man or woman is a better thing to find than a five-pound note. He or she is a radiating focus of good-will; and their entrance into a room is as though another candle had been lighted. We need not care whether they could prove the forty-seventh proposition; they do a better thing than that—they practically demonstrate the great Theorem of the Livableness of Life. Consequently, if a person cannot be happy without remaining idle, idle he should remain. It is a revolutionary precept; but, thanks to hunger and the workhouse, one not easily to be abused; and, within practical limits, it is one of the most incontestable truths in the whole Body of Morality. Look at one of your industrious fellows for a moment, I beseech you. He sows hurry and reaps indigestion; he puts a vast deal of activity out to interest and receives a large measure of nervous derangement in return. Either he absents himself entirely from all fellowship, and lives a recluse in a garret, with carpet slippers and a leaden ink-pot; or he comes among people swiftly and bitterly, in a contraction of his whole nervous system, to discharge some temper before he returns to work. I do not care how much or how well he works, this fellow is an evil creature in other people's lives. They would be happier if he were dead. They could easier do without his services in the Circumlocution Office than they can toler-

ate his fractious spirits. He poisons life at the well-head. It is better to be beggared out of hand by a scapegrace nephew than daily hag-ridden by a peevish uncle.

And what, in God's name, is all this pother about? For what cause do they embitter their own and other people's lives? That a man should publish three or thirty articles a year, that he should finish or not finish his great allegorical picture, are questions of little interest to the world. The ranks of life are full; and, although a thousand fall, there are always some to go into the breach. When they told Joan of Arc she should be at home minding women's work, she answered there were plenty to spin and wash. And so even with your own rare gifts! When nature is "so careless of the single life," why should we coddle ourselves into the fancy that our own is of exceptional importance? Suppose Shakespeare had been knocked on the head some dark night in Sir Thomas Lucy's preserves, the world would have wagged on better or worse, the pitcher gone to the well, the scythe to the corn, and the student to his book; and no one been any the wiser of the loss. There are not many works extant, if you look the alternative all over, which are worth the price of a pound of tobacco to a man of limited means. This is a sobering reflection for the proudest of our earthly vanities. Even a tobacconist may, upon consideration, find no great cause for personal vainglory in the phrase; for, although tobacco is an admirable sedative, the qualities necessary for retailing it are neither rare nor precious in themselves. Alas and alas! you may take it how you will, but the services of no single individual are indispensable. Atlas was just a gentleman with a protracted nightmare! And yet you see merchants who go and labor themselves into a great fortune and thence into the bankruptcy court; scribblers who keep scribbling at

little articles until their temper is a cross to all who come about them, as though Pharaoh should set the Israelites to make a pin instead of a pyramid; and fine young men who work themselves into a decline, and are driven off in a hearse with white plumes upon it. Would you not suppose these persons had been whispered, by the Master of the Ceremonies, the promise of some momentous destiny; and that this lukewarm bullet on which they play their farces was the bull's-eye and center point of all the universe? And yet it is not so. The ends for which they give away their priceless youth, for all they know, may be chimerical or hurtful; the glory and riches they expect may never come, or may find them indifferent; and they and the world they inhabit are so inconsiderable that the mind freezes at the thought.

TRAVELS WITH A DONKEY[1]

ROBERT LOUIS STEVENSON

THE DONKEY, THE PACK, AND THE PACK-SADDLE

IN a little place called Le Monastier, in a pleasant highland valley fifteen miles from Le Puy, I spent about a month of fine days. Monastier is notable for the making of lace, for drunkenness, for freedom of language, and for unparalleled political dissension. There are adherents of each of the four French parties—Legitimists, Orleanists, Imperialists, and Republicans—in this little mountain-town; and they all hate, loathe, decry, and calumniate each other. Except for business purposes, or to give each other the lie in a tavern brawl, they have laid aside even the civility of speech. 'Tis a mere mountain Poland. In the midst of this Babylon I found myself a rallying-point; every one was anxious to be kind and helpful to the stranger. This was not merely from the natural hospitality of mountain people, nor even from the surprise with which I was regarded as a man living of his own free will in Le Monastier, when he might just as well have lived anywhere else in this big world; it arose a good deal from my projected excursion southward through the Cévennes. A traveler of my sort was a thing hitherto unheard of in that district. I was looked upon with contempt, like a man who should project a journey to the moon, but yet with a respectful interest, like one setting forth for the inclement Pole. All were ready to help in

[1] Reprinted from *Travels with a Donkey in Cévennes.*

my preparations; a crowd of sympathizers supported me at the critical moment of a bargain; not a step was taken but was heralded by glasses round and celebrated by a dinner or a breakfast.

It was already hard upon October before I was ready to set forth, and at the high altitudes over which my road lay there was no Indian summer to be looked for. I was determined, if not to camp out, at least to have the means of camping out in my possession; for there is nothing more harassing to an easy mind than the necessity of reaching shelter by dusk, and the hospitality of a village inn is not always to be reckoned sure by those who trudge on foot. A tent, above all for a solitary traveler, is troublesome to pitch, and troublesome to strike again; and even on the march it forms a conspicuous feature in your baggage. A sleeping-sack, on the other hand, is always ready; you have only to get into it; it serves a double purpose: a bed by night, a portmanteau by day; and it does not advertise your intention of camping out to every curious passer-by. This is a huge point. If the camp is not secret, it is but a troubled resting-place; you become a public character; the convivial rustic visits your bedside after an early supper; and you must sleep with one eye open, and be up before the day. I decided on a sleeping-sack; and after repeated visits to Le Puy, and a deal of high living for myself and my advisers, a sleeping-sack was designed, constructed, and triumphantly brought home.

This child of my invention was nearly six feet square, exclusive of two triangular flaps to serve as a pillow by night and as the top and bottom of the sack by day. I call it "the sack," but it was never a sack by more than courtesy; only a sort of long roll or sausage, green waterproof cart-cloth without and blue sheep's fur within. It

was commodious as a valise, warm and dry for a bed. There was luxurious turning-room for one; and at a pinch the thing might serve for two. I could bury myself in it up to the neck; for my head I trusted to a fur cap, with a hood to fold down over my ears, and a band to pass under my nose like a respirator; and in case of heavy rain I proposed to make myself a little tent, or tentlet, with my waterproof coat, three stones, and a bent branch.

It will readily be conceived that I could not carry this huge package on my own, merely human, shoulders. It remained to chose a beast of burden. Now, a horse is a fine lady among animals, flighty, timid, delicate in eating, of tender health; he is too valuable and too restive to be left alone, so that you are chained to your brute as to a fellow galley-slave; a dangerous road puts him out of his wits; in short, he's an uncertain and exacting ally, and adds thirty-fold to the troubles of the voyager. What I required was something cheap and small and hardy, and of a stolid and peaceful temper; and all these requisites pointed to a donkey.

There dwelt an old man in Monastier, of rather unsound intellect according to some, much followed by street-boys, and known to fame as Father Adam. Father Adam had a cart, and to draw the cart a diminutive she-ass, not much bigger than a dog, the color of a mouse, with a kindly eye and a determined under-jaw. There was something neat and high-bred, a quakerish elegance, about the rogue that hit my fancy on the spot. Our first interview was in Monastier market-place. To prove her good temper, one child after another was set upon her back to ride, and one after another went head over heels into the air, until a want of confidence began to reign in youthful bosoms, and the experiment was discontinued

from a dearth of subjects. I was already backed by a deputation of my friends; but as if this were not enough, all the buyers and sellers came round and helped me in the bargain; and the ass and I and Father Adam were the center of a hubbub for near half an hour. At length she passed into my service for the consideration of sixty-five francs and a glass of brandy. The sack had already cost eighty francs and two glasses of beer; so that *Modestine,* as I instantly baptized her, was upon all accounts the cheaper article. Indeed, that was as it should be; for she was only an appurtenance of my mattress, or self-acting bedstead on four casters.

I had a last interview with Father Adam in a billiard-room at the witching hour of dawn, when I administered the brandy. He professed himself greatly touched by the separation, and declared he had often bought white bread for the donkey when he had been content with black bread for himself; but this, according to the best authorities, must have been a flight of fancy. He had a name in the village for brutally misusing the ass; yet it is certain that he shed a tear, and the tear made a clean mark down one cheek.

By the advice of a fallacious local saddler, a leather pad was made for me with rings to fasten on my bundle; and I thoughtfully completed my kit and arranged my toilet. By way of armory and utensils, I took a revolver, a little spirit-lamp and pan, a lantern and some half-penny candles, a jack-knife, and a large leather flask. The main cargo consisted of two entire changes of warm clothing—besides my traveling wear of country velveteen, pilot-coat, and knitted spencer—some books, and my railway-rug, which, being also in the form of a bag, made me a double castle for cold nights. The permanent larder was represented by cakes of chocolate and tins of Bologna sausage.

All this, except what I carried about my person, was easily stowed into the sheepskin bag; and by good fortune I threw in my empty knapsack, rather for convenience of carriage than from any thought that I should want it on my journey. For more immediate needs, I took a leg of cold mutton, a bottle of Beaujolais, an empty bottle to carry milk, an egg-beater, and a considerable quantity of black bread and white, like Father Adam, for myself and donkey, only in my scheme of things the destinations were reversed.

Monastrians of all shades of thought in politics had agreed in threatening me with many ludicrous misadventures, and with sudden death in many surprising forms. Cold, wolves, robbers, above all the nocturnal practical joker, were daily and eloquently forced on my attention. Yet in these vaticinations, the true, patent danger was left out. Like Christian, it was from my pack I suffered by the way. Before telling my own mishaps, let me, in two words, relate the lesson of my experience. If the pack is well strapped at the ends, and hung at full length—not doubled, for your life—across the pack-saddle, the traveler is safe. The saddle will certainly not fit, such is the imperfection of our transitory life; it will assuredly topple and tend to overset; but there are stones on every roadside, and a man soon learns the art of correcting any tendency to overbalance with a well-adjusted stone.

On the day of my departure I was up a little after five; by six, we began to load the donkey; and ten minutes after, my hopes were in the dust. The pad would not stay on *Modestine's* back for half a moment. I returned it to its maker, with whom I had so contumelious a passage that the street outside was crowded from wall to wall with gossips looking on and listening. The pad changed

hands with much vivacity; perhaps it would be more descriptive to say that we threw it at each other's heads; and at any rate, we were very warm and unfriendly, and spoke with a deal of freedom.

I had a common donkey pack-saddle—a *barde,* as they call it—fitted upon *Modestine,* and once more loaded her with my effects. The doubled sack, my pilot-coat (for it was warm, and I was to walk in my waistcoat), a great bar of black bread, and an open basket containing the white bread, the mutton, and the bottles, were all corded together in a very elaborate system of knots, and I looked on the result with fatuous content. In such a monstrous deck-cargo, all poised above the donkey's shoulders, with nothing below to balance, and a brand-new pack-saddle that had not yet been worn to fit the animal, and fastened with brand-new girths that might be expected to stretch and slacken by the way, even a very careless traveler should have seen disaster brewing. That elaborate system of knots, again, was the work of too many sympathizers to be very artfully designed. It is true they tightened the cords with a will; as many as three at a time would have a foot against *Modestine's* quarters, and be hauling with clenched teeth; but I learned afterwards that one thoughtful person, without any exercise of force, can make a more solid job than half a dozen heated and enthusiastic grooms. I was then but a novice; even after the misadventure of the pad nothing could disturb my security, and I went forth from the stable-door as an ox goeth to the slaughter.

A NIGHT AMONG THE PINES

From Bleymard after dinner, although it was already late, I set out to scale a portion of the Lozère. An ill-

marked stony drove road guided me forward; and I met nearly half a dozen bullock-carts descending from the woods, each laden with a whole pine-tree for the winter's firing. At the top of the woods, which do not climb very high upon this cold ridge, I struck leftward by a path among the pines, until I hit on a dell of green turf, where a streamlet made a little spout over some stones to serve me for a water-tap. "In a more sacred or sequestered bower . . . nor nymph, nor faunus, haunted." The trees were not old, but they grew thickly round the glade; there was no outlook, except north-eastward upon distant hill-tops, or straight upward to the sky; and the encampment felt secure and private like a room. By the time I had made my arrangements and fed *Modestine* the day was already beginning to decline. I buckled myself to the knees into my sack and made a hearty meal; and as soon as the sun went down, I pulled my cap over my eyes and fell asleep.

Night is a dead monotonous period under a roof; but in the open world it passes lightly, with its stars and dews and perfumes, and the hours are marked by changes in the face of Nature. What seems a kind of temporal death to people choked between walls and curtains is only a light and living slumber to the man who sleeps afield. All night long he can hear Nature breathing deeply and freely; even as she takes her rest, she turns and smiles; and there is one stirring hour unknown to those who dwell in houses, when a wakeful influence goes abroad over the sleeping hemisphere, and all the outdoor world are on their feet. It is then that the cock first crows, not this time to announce the dawn, but like a cheerful watchman speeding the course of night. Cattle awake on the meadows; sheep break their fast on dewy hillsides, and change to a new lair among the ferns; and houseless men,

who have lain down with the fowls, open their dim eyes and behold the beauty of the night.

At what inaudible summons, at what gentle touch of Nature, are all these sleepers thus recalled in the same hour to life? Do the stars rain down an influence, or do we share some thrill of mother earth below our resting bodies? Even shepherds and old country-folk, who are the deepest read in these arcana, have not a guess as to the means or purpose of this nightly resurrection. Towards two in the morning they declare the thing takes place; and neither know nor inquire further. And at least it is a pleasant incident. We are disturbed in our slumber only, like the luxurious Montaigne, "that we may the better and more sensibly relish it." We have a moment to look upon the stars. And there is a special pleasure for some minds in the reflection that we share the impulse with all outdoor creatures in our neighborhood, that we have escaped out of the Bastille of civilization, and are become, for the time being, a mere kindly animal and a sheep of Nature's flock.

When that hour came to me among the pines, I wakened thirsty. My tin was standing by me half full of water. I emptied it at a draught; and feeling broad awake after this internal cold aspersion, sat upright to make a cigarette. The stars were clear, colored, and jewel-like, but not frosty. A faint silvery vapor stood for the Milky Way. All around me the black fir-points stood upright and stockstill. By the whiteness of the pack-saddle, I could see *Modestine* walking round and round at the length of her tether; I could hear her steadily munching at the sward; but there was not another sound, save the indescribable quiet talk of the runnel over the stones. I lay lazily smoking and studying the color of the sky, as we call the void of space, from where it

showed a reddish gray behind the pines to where it showed a glossy blue-black between the stars. As if to be more like a peddler, I wear a silver ring. This I could see faintly shining as I raised and lowered the cigarette; and at each whiff the inside of my hand was illuminated, and became for a second the highest light in the landscape.

A faint wind, more like a moving coolness than a stream of air, passed down the glade from time to time so that even in my great chamber the air was being renewed all night long. I thought with horror of the inn at Chasseradès and the congregated nightcaps; with horror of the nocturnal prowesses of clerks and students, of hot theaters and pass-keys and close rooms. I have not often enjoyed a more serene possession of myself, nor felt more independent of material aids. The outer world, from which we cower into our houses, seemed after all a gentle habitable place; and night after night a man's bed, it seemed, was laid and waiting for him in the fields, where God keeps an open house. I thought I had rediscovered one of those truths which are revealed to savages and hid from political economists; at the least, I had discovered a new pleasure for myself. And yet even while I was exulting in my solitude I became aware of a strange lack. I wished a companion to lie near me in the starlight, silent and not moving, but ever within touch. For there is a fellowship more quiet even than solitude, and which, rightly understood, is solitude made perfect. And to live out of doors with the woman a man loves is of all lives the most complete and free.

As I thus lay, between content and longing, a faint noise stole towards me through the pines. I thought, at first, it was the crowing of cocks or the barking of dogs at some very distant farm; but steadily and gradually it took articulate shape in my ears until I became aware that

a passenger was going by upon the high-road in the valley, and singing loudly as he went. There was more of good-will than grace in his performance; but he trolled with ample lungs; and the sound of his voice took hold upon the hillside and set the air shaking in the leafy glens. I have heard people passing by night in sleeping cities; some of them sang; one, I remember, played loudly on the bagpipes. I have heard the rattle of a cart or carriage spring up suddenly after hours of stillness, and pass, for some minutes, within the range of my hearing as I lay abed. There is a romance about all who are abroad in the black hours, and with something of a thrill we try to guess their business. But here the romance was double: first, this glad passenger, lit internally with wine, who sent up his voice in music through the night; and then I, on the other hand, buckled into my sack, and smoking alone in the pine-woods between four and five thousand feet toward the stars.

When I awoke again (Sunday, 29th September), many of the stars had disappeared; only the stronger companions of the night still burned visibly overhead; and away towards the east I saw a faint haze of light upon the horizon, such as had been the Milky Way when I was last awake. Day was at hand. I lit my lantern, and by its glowworm light put on my boots and gaiters; then I broke up some bread for *Modestine,* filled my can at the water-tap, and lit my spirit-lamp to boil myself some chocolate. The blue darkness lay long in the glade where I had so sweetly slumbered; but soon there was a broad streak of orange melting into gold along the mountain-tops of Vivarais. A solemn glee possessed my mind at this gradual and lovely coming in of day. I heard the runnel with delight; I looked round me for something beautiful and unexpected; but the still black pine-trees,

the hollow glade, the munching ass, remained unchanged in figure. Nothing had altered but the light, and that, indeed, shed over all a spirit of life and of breathing peace, and moved me to a strange exhilaration.

I drank my water chocolate, which was hot if it was not rich, and strolled here and there, and up and down about the glade. While I was thus delaying, a gush of steady wind, as long as a heavy sigh, poured direct out of the quarter of the morning. It was cold, and set me sneezing. The trees near at hand tossed their black plumes in its passage, and I could see the thin distant spires of pine along the edge of the hill rock slightly to and fro against the golden east. Ten minutes after, the sunlight spread at a gallop along the hillside, scattering shadows and sparkles, and the day had come completely.

I hastened to prepare my pack, and tackle the steep ascent that lay before me; but I had something on my mind. It was only a fancy; yet a fancy will sometimes be importunate. I had been most hospitably received and punctually served in my green caravanserai. The room was airy, the water excellent, and the dawn had called me to a moment. I say nothing of the tapestries or the inimitable ceiling, nor yet of the view which I commanded from the windows; but I felt I was in some one's debt for all this liberal entertainment. And so it pleased me, in a half-laughing way, to leave pieces of money on the turf as I went along, until I had left enough for my night's lodging. I trust they did not fall to some rich and churlish drover.

WORDS THAT LAUGH AND CRY[1]

Newspaper editorials are frequently of such merit both in regard to expression and content that they deserve to occupy a real place in the literature of the day, and some possess qualities that justify their receiving consideration as literature which endures. Contrary to the European custom, comparatively few editorials in the United States bear the signature of the writer. As a result of this practice, which has become a characteristic of American newspapers, an editorial that does survive the brief period allotted to a newspaper edition is preserved as the expression of the periodical and not the work of the individual who gave it voice. Such is the fate of "Words That Laugh and Cry." This editorial was published in the New York *Sun* on March 16, 1890. It later appeared in a collection called *Casual Essays of the Sun,* but even here the identity of the writer was not revealed. A number of times it has been credited to Charles A. Dana, who was the editor of the *Sun* at that time, but it can be authoritatively stated that Mr. Dana was not the writer of it. "Words That Laugh and Cry" was written by some member of the editorial staff of the *Sun,* but the name of its author is not known. It will remain therefore another evidence of the impersonal character of the American newspaper.

Did it ever strike you that there was anything queer about the capacity of written words to absorb and convey feelings! Taken separately they are mere symbols with no more feeling to them than so many bricks, but string them along in a row under certain mysterious conditions and you find yourself laughing or crying as your eye runs over them. That words should convey mere ideas is not so remarkable. "The boy is fat," "The cat has nine tails" are statements that seem obviously enough within the power of written language. But it is different with feelings. They are no more visible in the symbols that

[1] First published as an editorial in the New York *Sun,* March 16, 1890, later published in "Casual Essays of the Sun," and reprinted here by permission of the New York *Sun.*

hold them than electricity is visible on the wire; and yet there they are, always ready to respond when the right test is applied by the right person. That spoken words, charged with human tones and lighted by human eyes, should carry feelings, is not so astonishing. The magnetic sympathy of the orator one understands; he might affect his audience, possibly, if he spoke in a language they did not know. But written words—how can they do it! Suppose, for example, that you possess remarkable facility in grouping language and that you have strong feelings upon some subject, which finally you determine to commit to paper. Your pen runs along, the words present themselves, or are dragged out, and fall into their places. You are a good deal moved; here you chuckle to yourself, and a half a dozen of lines further down a lump comes into your throat, and perhaps you have to wipe your eyes. You finish, and the copy goes to the printer. When it gets into print a reader sees it. His eye runs along the lines and down the page until it comes to the place where you chuckled as you wrote; then he smiles, and six lines below he has to swallow several times and snuffle and wink to restrain an exhibition of weakness. And then some one else comes along who is not so good a word juggler as you are, or who has no feelings, and swaps the words about a little and twists the sentences, and behold the spell is gone, and you have left a parcel of written language duly charged with facts, but without a single feeling.

No one can juggle with words with any degree of success without getting a vast respect for their independent ability. They will catch the best idea a man ever had as it flashes through his brain and hold on to it to surprise him with it long after, and make him wonder that he was ever man enough to have such an idea. And

often they will catch an idea on its way from the brain to the pen point, turn, twist, and improve on it as the eye winks, and in an instant there they are, strung hand in hand across the page and grinning back at the writer: "This is our idea, old man; not yours!"

As for poetry, every word that expects to earn its salt in poetry should have a head and a pair of legs of its own, to go and find its place, carrying another word, if necessary, on its back. The most that should be expected of any competent poet in regular practice is to serve a general summons and notice of action on the language. If the words won't do the rest for him it indicates that he is out of sympathy with his tools.

But you don't find feelings in written words unless there were feelings in the man who used them. With all their apparent independence, they seem to be little vessels that hold in some puzzling fashion exactly what is put into them. You can put tears into them, as though they were so many little buckets; and you can hang smiles along them, like Monday's clothes on the line; or you can starch them with facts and stand them up like a picket fence; but you won't get the tears out unless you first put them in. Art won't put them there. It is like the faculty of getting the quality of interest into pictures. If the quality exists in the artist's mind he is likely to find means to get it into his pictures, but if it isn't in the man no technical skill will supply it. So, if the feelings are in the writer and he knows his business, they will get into the words; but they must be in him first. It isn't the way the words are strung together that makes Lincoln's Gettysburg speech immortal, but the feelings that were in the man. But how do such little, plain words manage to keep their grip on such feelings? That is the miracle.

LEARNED WORDS AND POPULAR WORDS[1]

J. B. Greenough and G. L. Kittredge

Two Harvard professors, James Bradstreet Greenough and George L. Kittredge, realized that there is an irresistible fascination in the study of words if the study can be shorn of pedantry. *Words and Their Ways in English Speech* was the result, a book that has had a tremendous influence in arousing an interest in the development of the English vocabulary. Without sacrificing scholarship, they made their discussion of words and their uses readable to the man untutored in the intricate ways of philology. They showed how information of a scientific nature can be divested of its technicalities and presented in a clear, interesting way. The collaboration of Professors Greenough and Kittredge was an especially happy one for the purpose of producing this particular book, as the former was a professor of Latin and a fine student of Greek, and the latter was a professor of English, whose interest centered upon English classical literature and the origin and structural development of the English language.

Both men have made other scholarly contributions in language study and both have done important editing as well. Professor Greenough held the chair of Latin at Harvard for more than a quarter of a century and was the well-known editor of a series of classical text-books. He was born in Maine in 1833. Professor Kittredge is also a New Englander by birth and education, being born in Boston, February 28, 1860, and educated at Harvard, where he is still a professor of English. He has written on Chaucer and Shakespeare, and in collaboration with Professor F. A. Farley has produced several important grammars. His work as an editor is notable, the Athenæum Press Series of English Classics and the Albion Series of Anglo-Saxon and Middle English Poets having been published under his direction.

In every cultivated language there are two great classes of words which, taken together, comprise the whole vocabulary. First, there are those words with which we become acquainted in ordinary conversation, which we

[1] From *Words and Their Ways in English Speech*, by permission of the publishers, the Macmillan Company.

learn, that is to say, from the members of our own family and from our familiar associates, and which we should know and use even if we could not read or write. They concern the common things of life, and are the stock in trade of all who speak the language. Such words may be called "popular," since they belong to the people at large and are not the exclusive possession of a limited class.

On the other hand, our language includes a multitude of words which are comparatively seldom used in ordinary conversation. Their meanings are known to every educated person, but there is little occasion to employ them at home or in the market-place. Our first acquaintance with them comes not from our mother's lips or from the talk of our schoolmates, but from books that we read, lectures that we hear, or the more formal conversation of highly educated speakers who are discussing some particular topic in a style appropriately elevated above the habitual level of everyday life. Such words are called "learned," and the distinction between them and "popular" words is of great importance to a right understanding of linguistic process.

The difference between popular and learned words may be easily seen in a few examples. We may describe a girl as "lively" or as "vivacious." In the first case, we are using a native English formation from the familiar noun *life*. In the latter, we are using a Latin derivative which has precisely the same meaning. Yet the atmosphere of the two words is quite different. No one ever got the adjective *lively* out of a book. It is a part of everybody's vocabulary. We cannot remember a time when we did not know it, and we feel sure that we learned it long before we were able to read. On the other hand, we must have passed several years of our lives before

learning the word *vivacious*. We may even remember the first time that we saw it in print or heard it from some grown-up friend who was talking over our childish heads. Both *lively* and *vivacious* are good English words, but *lively* is popular and *vivacious* is learned.

From the same point of view we may contrast the following pairs of synonyms:[2] *the same, identical; speech, oration; fire, conflagration; choose, select; brave, valorous; swallowing, deglutition; striking, percussion; building, edifice; shady, umbrageous; puckery, astringent; learned, erudite; secret, cryptic; destroy, annihilate; stiff, rigid; flabby, flaccid; queer, eccentric; behead, decapitate; round, circular; thin, emaciated; fat, corpulent; truthful, veracious; try, endeavor; bit, modicum; piece, fragment; sharp, acute; crazy, maniacal; king, sovereign; book, volume; lying, mendacious; beggar, mendicant; teacher, instructor; play, drama; air, atmosphere; paint, pigment.*

The terms "popular" and "learned," as applied to words, are not absolute definitions. No two persons have the same stock of words, and the same word may be "popular" in one's man vocabulary and "learned" in another's.[3] There are also different grades of "popularity"; indeed there is in reality a continuous gradation from infantile words like *mama* and *papa* to such erudite derivatives as *concatenation* and *cataclysm*. Still, the division into "learned" and "popular" is convenient and sound. Disputes may arise as to the classification of any

[2] Not all the words are exact synonyms, but that is of no importance in the present discussion.

[3] It is instructive to study one's own vocabulary from this point of view, making a list of (1) those words which we feel sure we learned in childhood, (2) those which we have learned in later life, but not from books, (3) those which have entered our vocabulary from books. We shall also find it useful to consider the difference between our reading vocabulary and our speaking vocabulary.

particular word, but there can be no difference of opinion about the general principle. We must be careful, however, to avoid misconception. When we call a word "popular," we do not mean that it is a favorite word, but simply that it belongs to the people as a whole—that is, it is everybody's word, not the possession of a limited number. When we call a word "learned" we do not mean that it is used by scholars alone, but simply that its presence in the English vocabulary is due to books and the cultivation of literature rather than to the actual needs of ordinary conversation.

Here is one of the main differences between a cultivated and an uncultivated language. Both possess a large stock of "popular" words; but the cultivated language is also rich in "learned" words, with which the ruder tongue has not provided itself simply because it has never felt the need of them.

In English it will usually be found that the so-called learned words are of foreign origin. Most of them are derived from French or Latin, and a considerable number from Greek. The reason is obvious. The development of English literature has not been isolated, but has taken place in close connection with the earnest study of foreign literatures. Thus, in the fourteenth century, when our language was assuming substantially the shape which it now bears, the literary exponent of English life and thought, Geoffrey Chaucer, the first of our great poets, was profoundly influenced by Latin literature as well as by that of France and Italy. In the sixteenth and seventeenth centuries the Greek and Latin classics were vigorously studied by almost every English writer of any consequence, and the great authors of antiquity were regarded as models, not merely of general literary form, but of expression in all its details. These foreign influences

have varied much in character and intensity. But it is safe to say that there has been no time since 1350 when English writers of the highest class have not looked to Latin, French, and Italian authors for guidance and inspiration. From 1600 to the present day the direct influence of Greek literature and philosophy has also been enormous, affecting as it has the finest spirits in a peculiarly pervasive way, and its indirect influence is quite beyond calculation. Greek civilization, we should remember, has acted upon us, not merely through Greek literature and art, but also through the medium of Latin, since the Romans borrowed their higher culture from Greece.

Now certain facts in the history of our language have made it peculiarly inclined to borrow from French and Latin. The Norman Conquest in the eleventh century made French the language of polite society in England; and, long after the contact between Norman-French and English had ceased to be of direct significance in our linguistic development, the reading and speaking of French and the study of French literature formed an important part of the education of English-speaking men and women. When literary English was in process of formation in the fourteenth and fifteenth centuries, the authors whose works determined the cultivated vocabulary were almost as familiar with French as with their mother tongue, and it was therefore natural that they should borrow a good many French words. But these same authors were also familiar with Latin, which, though called a dead language, has always been the professional dialect of ecclesiastics and a *lingua franca* for educated men. Thus the borrowing from French and from Latin went on side by side, and it is often impossible to say from which of the two languages a particular English word is taken. The practice of naturalizing

French and Latin words was, then, firmly established in the fourteenth century, and when in the sixteenth century there was a great revival of Greek studies in England, the close literary relations between Greece and Rome facilitated the adoption of a considerable number of words from the Greek. Linguistic processes are cumulative; one does not stop when another begins. Hence we find all of these influences active in increasing the modern vocabulary. In particular, the language of science has looked to Greece for its terms as the language of abstract thought has drawn its nomenclature from Latin.

It would, however, be a great mistake to suppose that all our "popular" terms are of native origin and that all foreign derivatives are learned. The younger and less cultivated members of a community are naturally inclined to imitate the speech of the older and more cultivated. Hence, as time has passed, a great number of French and Latin words, and even some that are derived from the Greek, have made themselves quite at home in ordinary conversation. Such words, whatever their origin, are as truly popular as if they had been a part of our language from the earliest period.

Examples of such popular words of foreign derivation are the following:

From French: army, arrest, bay, card, catch, city, chase, chimney, conveyance, deceive, entry, engine, forge, hour, letter, mantle, mason, merchant, manner, mountain, map, move, navy, prince, pen, pencil, parlor, river, rage, soldier, second, table, veil, village.

From Latin: accommodate, act, add, adopt, animal, anxious, applause, arbitrate, auction, agent, calculate, cancer, circus, collapse, collision, column, congress, connect, consequence, contract, contradict, correct, creation, cucumber, curve, centennial, decorate, delicate, dentist,

describe, diary, diffident, different, digest, direct, discuss, divide, educate, elect, emigrant, equal, erect, expect, extra, fact, genius, genuine, graduate, gratis, horrid, imitate, item, joke, junction, junior, major, magnificent, medicine, medium, miser, obstinate, omit, pagan, pastor, pauper, pedal, pendulum, permit, picture, plague, postpone, premium, prevent, prospect, protect, quiet, recess, recipe, reduce, regular, salute, secure, series, single, species, specimen, splendid, strict, student, subscribe, subtract, suburb, suffocate, suggest, tedious, timid, urge, vaccinate, various, ventilation, veto, victor, vim, vote.

From Greek: anthracite, apathy, arsenic, aster, athlete, atlas, attic, barometer, biography, calomel, catarrh, catholic, catastrophe, catechism, caustic, chemist, crisis, dialogue, diphtheria, elastic, encyclopedia, hector, homeopathy, iodine, lexicon, microscope, monotonous, myth, neuralgia, panic, panorama, photography, skeleton, strychnine, tactics, telegraph, tonic, zoölogy.

No language can borrow extensively from foreign sources without losing a good many words of its own. Hence, if we compare the oldest form of English (Anglo-Saxon) with our modern speech, we shall discover that many words that were common in Anglo-Saxon have gone quite out of use, being replaced by their foreign equivalents. The "learned" word has driven out the "popular" word, and has thereupon, in many cases, become "popular" itself. Thus instead of A.S. *herë* we use the French word *army;* instead of *thegn* or *thēow,* the French word *servant;* instead of *scipherë* (a compound of the Anglo-Saxon word for *ship* and that for *army*), we use *navy;* instead of *micel,* we say *large;* instead of *sigë, victory;* instead of *swīthe, very;* instead of *laf,* we say *remainder* or *remnant,* and so on.

Curiously enough, it sometimes happens that when

both the native and the foreign word still have a place in our language, the latter has become the more popular, the former being relegated to the higher or poetical style. Thus it is more natural for us to say *divide* (from L. *divido*) than *cleave* (from A.S. *cleofan*); *travel* than *fare;*[4] *river* than *stream; castle* than *burg; residence* than *dwelling; remain* than *abide, expect* than *ween; pupil* or *scholar* than *learner; destruction* than *bale; protect* or *defend* than *shield; immediately* than *straightway; encourage* than *hearten; present* than *bestow; firm* than *steadfast; direct* than *forthright; impetuous* than *heady; modest* than *shamefaced; prince* than *atheling; noise* or *tumult* or *disturbance* than *din; people* than *folk;*[5] *prophet* than *soothsayer; fate* than *weird; lancer* than *spearman; I intend* than *I am minded; excavate* than *delve; resist* than *withstand; beautiful* than *goodly; gracious* than *kindly*. The very fact that the native words belong to the older stock has made them poetical; for the language of poetry is always more archaic than that of prose.

Frequently we have kept both the native and the foreign word, but in different senses, thus increasing our vocabulary to good purpose. The foreign word may be more emphatic than the native: as in *brilliant, bright; scintillate, sparkle; astonishment, wonder; a conflagration, a fire; devour, eat up; labor, work*. Or the native word may be more emphatic than the foreign as in *stench, odor; straightforward, direct; dead, deceased; murder, homicide*. Often, however, there is a wide distinction in meaning. Thus *driver* differs from *propeller; child* from *infant; history* from *tale; book* from *volume; forehead* from *front; length* from *longitude; moony* from *lunar; sunny* from *solar; nightly* from *nocturnal; churl* from *villain;*

[4] Fare is still common as a noun and in figurative senses.
[5] But the irregular plural *folks* is a common colloquialism.

wretch from *miser; poor man* from *pauper; run across* from *occur; run into* from *incur; fight* from *debate.*

From time to time attempts have been made to oust foreign words from our vocabulary and to replace them by native words that have become either obsolete or less usual (that is to say, less popular). Whimsical theorists have even set up the principle that no word of foreign origin should be employed when a native word of the same meaning exists. In English, however, all such efforts are predestined to failure. They result, not in a simpler and more natural style, but in something unfamiliar, fantastic, and affected. Foreign words that have long been in common use are just as much English as if they had been a part of our language from the beginning. There is no rational theory on which they should be shunned. It would be just as reasonable for an Englishman whose ancestors had lived in the island ever since the time of King Alfred to disown as his countrymen the descendants of a Frenchman or a German who settled there three hundred years ago. The test of the learned or the popular character of a word is not its etymology, but the facts relating to its habitual employment by plain speakers. Nor is there any principle on which, of two expressions, that which is popular should be preferred to that which is learned or less familiar. The sole criterion of choice consists in the appropriateness of one's language to the subject or the occasion. It would be ridiculous to address a crowd of soldiers in the same language that one would employ in a council of war. It would be no less ridiculous to harangue an assembly of generals as if they were a regiment on the eve of battle. The reaction against the excessive Latinization of English is a wholesome tendency, but it becomes

a mere "fad" when it is carried out in a doctrinaire manner. As Chaucer declares:

> "Ek Plato seith, whoso that can him rede,
> 'The wordes mot be cosin to the dede.'"

Every educated person has at least two ways of speaking his mother tongue. The first is that which he employs in his family, among his familiar friends, and on ordinary occasions. The second is that which he uses in discoursing on more complicated subjects and in addressing persons with whom he is less intimately acquainted. It is, in short, the language which he employs when he is "on his dignity," as he puts on evening dress when he is going to dine. The difference between these two forms of language consists, in great measure, in a difference of vocabulary. The basis of familiar words must be the same in both, but the vocabulary appropriate to the more formal occasion will include many terms which would be stilted or affected in ordinary talk. There is also considerable difference between familiar and dignified language in the manner of utterance. Contrast the rapid utterance of our everyday dialect, full of contractions and clipped forms, with the more distinct enunciation of the pulpit or the platform. Thus, in conversation, we habitually employ such contractions as *I'll, don't, won't, it's, we'd, he'd,* and the like, which we should never use in public speaking, unless of set purpose, to give a markedly colloquial tinge to what we have to say.

LIFE AT OXFORD[1]

JOHN CORBIN

It must be delightful if one can link up one's hobby with one's profession. Evidently that is what John Corbin has been able to do, for, while he has centered his professional interest in newspaper and magazine editing and in dramatic criticism, he has found time and inclination to observe school life both in this country and in England and to record those observations in entertaining fashion. Mr. Corbin was born in Chicago, May 2, 1870. He was educated at Harvard, taking both his Bachelor's and his Master's degrees there. He followed his collegiate experience in this country with a year at Balliol College, Oxford. The contrast in educational aims, methods, and life presented by the United States and England evidently aroused his interest, and two illuminating books were the result, *Schoolboy Life in England —an American View* and *An American at Oxford,* the latter portraying the undergraduate life which so indelibly stamps English youth and prepares them for national leadership. Mr. Corbin's interest in the effect of college upon young people did not cease with his return to America, evidence of which is his book *Which College for the Boy?,* presenting the contrasts that this country offers in its different types of educational institutions.

Mr. Corbin's authorship is not confined to books dealing with schools and colleges. He has written much on the drama, both that of today and of earlier periods. At present he is the dramatic critic of the *New York Times* and frequently contributes illuminating comments of a more general editorial character as well.

I

ONE of the familiar sights at Oxford is the American traveler who stops over on his way from Liverpool to London, and, wandering up among the walls of the twenty colleges from the Great Western Station, asks the first undergraduate he meets which building is the uni-

[1] From *An American at Oxford.* Reprinted by permission of, and by special arrangement with the Houghton Mifflin Company.

versity. When an Oxford man is first asked this, he is pretty sure to answer that there isn't any university; but as the answer is taken as a rudeness, he soon finds it more agreeable to direct inquirers to one of the three or four single buildings, scattered hither and yon among the ubiquitous colleges, in which the few functions of the university are performed.

To the undergraduate the university is an abstract institution that at most examines him two or three times, "plows" him, or graduates him. He becomes a member of it by being admitted into one of the colleges. To be sure, he matriculates also as a student of the university; but the ceremony is important mainly as a survival from the historic past, and is memorable to him perhaps because it takes place beneath the beautiful medieval roof of the Divinity School; perhaps because he receives from the vice-chancellor a copy of the university statutes, written in medieval Latin, which it is to be his chief delight to break. Except when he is in for "schools," as the examinations are called, the university fades beyond his horizon. If he says he is "reading" at Oxford, he has the city in mind. He is more likely to describe himself as "up at" Magdalen, Balliol, or elsewhere. This English idea that a university is a mere multiplication of colleges is so firmly fixed that the very word is defined as "a collection of institutions of learning at a common center." In the daily life of the undergraduate, in his religious observances, and in regulating his studies, the college is supreme.

To an American the English college is not at first sight a wholly pleasing object. It has walls that one would take to be insurmountable if they were not crowned with shards of bottles mortared into the coping; and it has gates that seem capable of resisting a siege until one

notices that they are reinforced by a *cheval de frise,* or a row of bent spikes like those that keep the bears in their dens at the Zoo. Like so many English institutions, its outward and visible signs belong to the manners of forgotten ages, even while it is charged with a vigorous and very modern life. A closer view of it, I hope, will show that in spite of the barnacles of the past that cling to it—and in some measure, too, because of them—it is the expression of a very high ideal of undergraduate convenience and freedom.

The virtue of the college lies in the fact that it gives every man a suitable home, and provides that he come under the best influences of the university with the least possible effort and delay. When a freshman arrives at the college the medieval gate is unbarred by a very modern porter, who lifts boxes and bags from the hansom in the most obliging manner; and he is presently shown to his cloisteral chambers by a friendly and urbane butler or steward. To accommodate the newcomers in the more populous colleges a measure is resorted to that shocks all American ideas of academic propriety. Enough seniors—fourth and third year men—are turned out of college to make room for the freshmen. The assumption is that these upper classmen have had every opportunity to profit by the life of the college and are prepared to flock by themselves in the town. Little communities of four or five fellows who have proved congenial live together in "diggings"—that is, in some townsman's house hard by the college gate. This arrangement makes possible closer and more intimate relationship among them than would otherwise be likely; and, by insuring them against the distractions of life in the college, it gives them a solid year for study before the final examination. It cannot be said that they leave college without regret, but I never

heard a word of complaint, and it is tacitly admitted that, on the whole, they profit by the arrangement.

When the freshman has been shown to his room he falls to the care of the "scout," a dignitary in the employ of the college who stands in somewhat less than the place of a parent and more than that of a servant to some half a dozen fellows whose rooms are adjacent. The more substantial furnishings in the rooms are usually permanent, belonging to the college; each successive occupant is charged for interest on the investment and for depreciation by wear. Thus the furniture is far more comfortable than in an American college and costs the occupant less. Bed and table linen, cutlery, and a few of the more personal furnishings the student brings himself. If one neglects to bring them, however, as, I confess, I did, through ignorance, mine host, the scout, clandestinely levies on the man above for sheets, on the man below for knives and forks, and on the man across the way for table linen. And there is no call for either shame on the one part or resentment on the other, for is not the scout the representative of the hospitality of the college? "When you have time, sir," the scout says kindly, "you will order your own linen and cutlery." How high a state of civilization such an arrangement implies can be appreciated only by those who have turned up friendless in an American university.

As soon as the freshman is settled in his rooms, and sometimes even before, his tutor meets him and arranges for a formal presentation to the dean and master. All three are apt to show their interest in a freshman by advising him as to trying for the athletic teams, joining the college clubs and societies, and, in a word, as to all the concerns of undergraduate life except his studies; these come later. If a man has any particular gift, athletic

or otherwise, the tutor introduces him to the upper classman he should know, or, when this is not feasible, gives a word to the upper classmen, who take the matter into their own hands. If a fellow has no especial gift, the tutor is quite as sure to say the proper word to the fellows who have most talent for drawing out newcomers.

In the first weeks of a freshman's residence he finds sundry pasteboards tucked beneath his door—the upper classman's call is seldom more than the formal dropping of a card. The freshman is expected to return these calls at once and is debarred by a happy custom from leaving his card in return. He goes again and again until he finds his upper classman. By direct introduction from the tutor or by this formality of calling, the freshman soons meets half a dozen upper classmen, generally second-year men, and in due time he receives little notes like this:

DEAR SMITH,—Come to my rooms to breakfast, if you can, with Mr. Brown and me on Wednesday at 8.30.

Yours sincerely,
A. ROBINSON.

At table the freshman finds other freshmen, whose interests are presumably similar to his own.

No one supposes for a moment that all this is done out of simple human kindness. The freshman breakfast is a conventional institution for gathering together the unlicked cubs so that the influences of the college can take hold of them. The reputation of the college in general demands that it keep up a name for hospitality, and in particular the clubs and athletic teams find it of advantage to get the run of all available new material. As a result of this machinery for initiating newcomers, a man usually ceases to be a freshman after a single term

—two months—of residence, and it is always assumed that he does.

If one's idiosyncrasies do not yield to the kindlier treatment he is liable to be "ragged," or, as we should say, hazed. The more I learned of Oxford motives, the less anxious I was to censure the system of ragging. In an article I wrote, after only a few months' stay, I spoke of it as boyish and undignified, and most Americans, I feel sure, would hold up the hand of public horror. Yet I am not now inclined to be thankful that we are not as they. Ragging is doubtless a survival of the excellently efficient system of discipline in the public schools where the older boys have charge of the manners and morals of the younger, if indeed it is not, like public-school discipline, an inheritance from the Middle Ages. In the schools, to be sure, the sixth form take their duties with great sobriety of conscience, which is scarcely the case in the college; but the difference of spirit in the colleges is perhaps justifiable.

II

When a freshman is once established in college, his life falls into a pleasantly varied routine. The day is ushered in by the scout, who bustles into the bedroom, throws aside the curtain, pours out the bath, and shouts, "Half past seven, sir," in a tone that makes it impossible to forget that chapel—or if one chooses, roll-call—comes at eight. Unless one keeps his six chapels or "rollers" a week, he is promptly "hauled" before the dean, who perhaps "gates" him. To be gated is to be forbidden to pass the college gate after dark, and fined a shilling for each night of confinement. To an American all this brings recollections of the paternal roof, where tardiness at

breakfast meant, perhaps, the loss of dessert and bedtime an hour earlier. I remember once, when out of training, deliberately cutting chapel to see with what mien the good dean performed his nursery duties. His calm was unruffled, his dignity unsullied. I soon came to find that the rules about rising were bowed to and indeed respected by all concerned, even while they were broken. They are distinctly more lax than those the fellows have been accustomed to in the public schools, and they are conceded to be for the best welfare of the college.

Breakfast comes soon after chapel, or roll-call. If a man has "kept a dirty roller," that is, has reported in pajamas, ulster, and boots, and has turned in again, the scout puts the breakfast before the fire on a trestle built of shovel, poker, and tongs, where it remains edible until noon. If a man has a breakfast party on, the scout makes sure that he is stirring in season, and, hurrying through the other rooms on the staircase, is presently on hand for as long as he may be wanted. The usual Oxford breakfast is a single course, which not infrequently consists of some one of the excellent English pork products with an egg or kidneys. There may be two courses, in which case the first is of the no less excellent fresh fish. There are no vegetables. The breakfast is ended with toast and jam or marmalade. When one has fellows in to breakfast—and the Oxford custom of rooming alone instead of chumming makes such hospitality frequent—his usual meal is increased by a course, say, of chicken. In any case it leads to a morning cigarette, for tobacco aids digestion and helps fill the hour or so after meals which an Englishman gives to relaxation.

At ten o'clock the breakfast may be interrupted for a moment by the exit of some one bent on attending a lecture, though one apologizes for such an act as if it

were scarcely good form. An appointment with one's tutor is a more legitimate excuse for leaving; but even this is always an occasion for an apology, in behalf of the tutor, of course, for one is certainly not himself responsition of the "bleachers" on an American field is perble. If a quorum is left, they manage to sit comfortably by the fire, smoking and chatting in spite of lectures and tutors, until by mutual consent they scatter to glance at the *Times* and the *Sportsman* in the common-room, or even to get in a bit of reading.

Luncheon often consists of bread and cheese and jam from the buttery, with perhaps a half-pint of bitter beer; but it may, like the breakfast, come from the college kitchen. In any case it is very light, for almost immediately after it everybody scatters to field and track and river for the exercise that the English climate makes necessary and the sport that the English temperament demands.

By four o'clock every one is back in college tubbed and dressed for tea, which a man serves himself in his rooms to as many fellows as he has been able to gather in on field or river. If he is eager to hear of the games he has not been able to witness, he goes to the junior common-room or to his club, where he is sure to find a dozen or so of kindred spirits representing every sport of importance. In this way he hears the minutest details of the games of the day from the players themselves; and before nightfall—such is the influence of tea—those bits of gossip which in America are known chiefly among members of a team have ramified the college. Thus the funcformed with a vengeance by the easy chairs before a common-room fire; and a man had better be kicked off the team by an American captain than have his shortcomings served up with common-room tea.

The two hours between tea and dinner may be, and usually are, spent in reading.

At seven o'clock the college bell rings, and in two minutes the fellows have thrown on their gowns and are seated at table, where the scouts are in readiness to serve them. As a rule a man may sit wherever he chooses; this is one of the admirable arrangements for breaking up such cliques as inevitably form in a college. But in point of fact a man usually ends by sitting in some certain quarter of the hall, where from day to day he finds much the same set of fellows. Thus all the advantages of friendly intercourse are attained without any real exclusiveness. This may seem a small point; but an hour a day becomes an item in four years, especially if it is the hour when men are most disposed to be companionable.

The English college hall is a miniature of Memorial Hall at Harvard, of which it is the prototype. It has the same somberly beautiful roof, the same richness of stained glass. It has also the same memorable and impressive canvases, though the worthies they portray are likely to be the princes and prelates of Holbein instead of the soldiers, merchants, and divines of Copley and Gilbert Stuart. The tables are of antique oak, with the shadow of centuries in its grain, and the college plate bears the names and date of the Restoration. To an American the mugs he drinks his beer from seem old enough, but the Englishman finds them aggressively new. They are not, however, without endearing associations, for the mugs that preceded them were last used to drink a health to King Charles, and were then stamped into coin to buy food and drink for his soldiers. The one or two colleges that, for Puritan principles or thrift, or both, refused to give up their old plate are not overproud of showing it.

Across the end of the hall is a platform for high table,

at which the dons assemble as soon as the undergraduates are well seated. On Sunday night they come out in full force, and from the time the first one enters until the last is seated, the undergraduates rattle and bang the tables, until it seems as if the glass must splinter. When, as often happens, a distinguished graduate comes up—the speaker of the Commons to Balliol, or the prime minister to Christ Church—the enthusiasm has usually to be stopped by a gesture from the master or the dean.

The dons at high table, like the British peers, mingle judicial with legislative functions. All disputes about sconces are referred to them, and their decrees are absolute. A sconce is a penalty for a breach of good manners at table, and is an institution that can be traced far back into the Middle Ages. The offenses that are sconcible may be summarized as punning, swearing, talking shop, and coming to hall after high table is in session. Take, for instance, the case of a certain oarsman who found the dinner forms rather too rigid after his first day on sliding seats. By way of comforting himself, he remarked that the Lord giveth and the Lord taketh away. Who is to decide whether he is guilty of profanity? The master, of course, and his assembled court of dons. The remark and the attendant circumstances are written on the back of an order-slip by the senior scholar present, and a scout is despatched with it. Imagine, then, the master presenting this question to the dons: Is it profanity to refer by means of a quotation from Scripture to the cuticle one loses in a college boat? Suppose the dons decree that it is. The culprit has the alternative of paying a shilling to the college library or ordering a tun of bitter beer. If he decides for beer, a second alternative confronts him: he may drink it down in one uninterrupted draft, or he may kiss the cup and send it circling the

table. If he tries to floor the sconce and fails, he has to order more beer for the table; but if he succeeds, the man who sconced him has to pay the shot and order a second tun for the table.

In the evening, when the season permits, the fellows sit out-of-doors after dinner, smoking and playing bowls. There is no place in which the spring comes more sweetly than in an Oxford garden. The high walls are at once a trap for the first warm rays of the sun and a barrier against the winds of March. The daffodils and crocuses spring up with joy as the gardener bids; and the apple and cherry trees coddle against the warm north walls, spreading out their early buds gratefully to the mild English sun. For long, quiet hours after dinner they flaunt their beauty to the fellows smoking and breathe their sweetness to the fellows playing bowls. "No man," exclaims the American visitor, "could live four years in these gardens of delight and not be made gentler and nobler!" Perhaps! though not altogether in the way the visitor imagines. When the flush of summer is on, the loiterers loll on the lawn full length; and as they watch the insects crawl among the grass they make bets on them, just as the gravest and most reverend seniors have been known to do in America.

In the windows overlooking the quadrangle are boxes of brilliant flowers, above which the smoke of a pipe comes curling out. At Harvard some fellows have geraniums in their windows, but only the very rich; and when they began the custom an ancient graduate wrote one of those communications to the *Crimson,* saying that if men put unmanly boxes of flowers in the window, how can they expect to beat Yale? Flower-boxes, no sand. At Oxford they manage things so that anybody may have flower-boxes; and their associations are by no means

unmanly. This is the way they do it. In the early summer a gardener's wagon from the country draws up by the college gate, and the driver cries: "Flowers! Flowers for a pair of old bags, sir." *Bags* is of course the fitting term for English trousers—which don't fit; and I should like to inform that ancient graduate that the window-boxes at Oxford suggest the very badge of manhood.

As long as the English twilight lingers, the men will sit and talk and sing to the mandolin; and I have heard of fellows sitting and talking all night, not turning in until the porter appeared to take their names at roll-call. On the eve of May-day it is quite the custom to sit out, for at dawn one may go to see the pretty ceremony of heralding the May on Magdalen Tower. The Magdalen choir-boys—the sweetest songsters in all Oxford—mount to the top of that most beautiful of Gothic towers, and, standing among the pinnacles—pinnacles afire with the spirituality of the Middle Ages, that warms all the senses with purity and beauty—those boys, I say, on that tower and among those pinnacles, open their mouths and sing a Latin song to greet the May. Meantime, the fellows who have come out to listen in the street below make catcalls and blow fish-horns. The song above is the survival of a Romish, perhaps a Druidical, custom; the racket below is the survival of a Puritan protest. That is Oxford in symbol! Its dignity and mellowness are not so much a matter of flowering gardens and crumbling walls as of the traditions of the centuries in which the whole life of the place has deep sources; and the noblest of its institutions are fringed with survivals that run riot in the grotesque.

If a man intends to spend the evening out of college, he has to make a dash before nine o'clock; for love or for money the porter may not let an inmate out after

nine. One man I knew was able to escape by guile. He had a brother in Trinity whom he very much resembled, and whenever he wanted to go out, he would tilt his mortarboard forward, wrap his gown high about his neck, as it is usually worn of an evening, and bidding the porter a polite good night, say: "Charge me to my brother, Hancock, if you please." The charge is the inconsiderable sum of one penny, and is the penalty of having a late guest. Having profited by my experience with the similar charge for keeping my name on the college books, I never asked its why and wherefore. Both are no doubt survivals of some medieval custom, the authority of which no college employee—or don, for the matter of that—would question. Such matters interest the Oxford man quite as little as the question how he comes by a tonsil or a vermiform appendix. They are there, and he makes the best of them.

If a fellow leaves college for an evening, it is for a foregathering at some other college, or to go to the theater. As a rule he wears a cloth cap. A "billycock" or "bowler," as the pot hat is called, is as thoroughly frowned on now in English colleges as it was with us a dozen years ago. As for the mortarboard and gown, undergraduate opinion rather requires that they be left behind. This is largely, no doubt, because they are required by law to be worn. So far as the undergraduates are concerned, every operative statute of the university, with the exception of those relating to matriculation and graduation, refers to conduct in the streets after nightfall, and almost without exception they are honored in the breach. This is out of disregard for the vice-chancellor of the university, who is familiarly called the vice, because he serves as a warning to others for the practice of virtue. The vice makes his power felt in characteristically dark

and tortuous ways. His factors are two proctors, college dons in daytime, but skulkers after nightfall, each of whom has his bulldogs, that is, scouts employed literally to spy upon the students. If these catch you without cap or gown, they cause you to be proctorized or "progged," as it is called, which involves a matter of five shillings or so. As a rule there is little danger of progging, but my first term fell in evil days. For some reason or other the chest of the university showed a deficit of sundry pounds, shillings, and pence; and as it had long ceased to need or receive regular bequests—the finance of the institution being in the hands of the colleges—a crisis was at hand. A more serious problem had doubtless never arisen since the great question was solved of keeping undergraduates' names on the books. The expedient of the vice-chancellor was to summon the proctors, and bid them charge their bulldogs to prog all freshmen caught at night without cap and gown. The deficit in the university chest was made up at five shillings a head.

One of the vice-chancellor's rules is that no undergraduate shall enter an Oxford "pub." Now the only restaurant in town, Queen's, is run in conjunction with a pub, and was once the favorite resort of all who were bent on breaking the monotony of an English Sunday. The vice-chancellor resolved to destroy this den of Sabbath-breaking, and the undergraduates resolved no less firmly to defend their stronghold. The result was a hand-to-hand fight with the bulldogs, which ended so triumphantly for the undergraduates that a dozen or more of them were sent down. In the articles of the peace that followed, it was stipulated, I was told, that so long as the restaurant was closed Sunday afternoons and nights, it should never suffer from the visit of proctor or bulldog. As a result, Queen's is a great scene of under-

graduate foregatherings. The dinners are good enough and reasonably cheap; and as most excellent champagne is to be had at twelve shillings the bottle, the diners are not unlikely to get back to college a trifle buffy, in the Oxford phrase.

By an interesting survival of medieval custom, the vice-chancellor has supreme power over the morals of the town, and any citizen who transgresses his laws is visited with summary punishment. For a tradesman or publican to assist in breaking university rules means outlawry and ruin, and for certain offenses a citizen may be punished by imprisonment. Over the Oxford theater the vice-chancellor's power is absolute. In my time he was much more solicitous that the undergraduate be kept from knowledge of the omnipresent woman with a past than that dramatic art should flourish, and forbade the town more than one excellent play of the modern school of comedy that had been seen and discussed in London by the younger sisters of the undergraduates. The woman with a present is virtually absent.

Time was when no Oxford play was quite successful unless the undergraduates assisted at its first night, though in a way very different from that which the term denotes in France. The assistance was of the kind so generously rendered in New York and Boston on the evening of an athletic contest. Even to-day, just for tradition's sake, the undergraduates sometimes make a row. A lot of B. N. C. men, as the clanny sons of Brazenose College call themselves, may insist that an opera stop while the troupe listen to one of their own excellent vocal performances; and I once saw a great sprinter, not unknown to Yale men, rise from his seat, face the audience, and, pointing with his thumb over his shoulder at the soubrette, announce impressively: "Do you know, I rather like that

girl!" The show is usually over just before eleven, and then occurs an amusing, if unseemly, scramble to get back to college before the hour strikes. A man who stays out after ten is fined threepence; after eleven the fine is sixpence. When all is said, why shouldn't one sprint for threepence?

If you stay out of college after midnight, the dean makes a star-chamber offense of it, fines you a "quid" or two, and like as not sends you down. This sounds a trifle worse than it is; for if you must be away, your absence can usually be arranged for. If you find yourself in the streets after twelve, you may rap on some friend's bedroom window and tell him of your plight through the iron grating. He will then spend the first half of the night in your bed and wash his hands in your bowl. With such evidence as this to support him, the scout is not apt, if sufficiently retained, to report a suspected absence. I have even known fellows to make their arrangements in advance and spend the night in town; but the ruse has its dangers, and the penalty is to be sent down for good and all.

It is owing to such regulations as these that life in the English college has the name of being cloisteral. Just how cloisteral it is in spirit no one can know who has not taken part in a rag in the quad; and this is impossible to an outsider, for at midnight all visitors are required to leave, under a heavy penalty to their host.

I have not come to a trust in the college system without experience. I have also sounded the undergraduates as to whether they would find use for a greater liberty. I found that the fellows were not only content with their lot, but would resent any loosening of the restrictions. To give them the liberty of London at night, or even of Oxford, they argued, would tend to

break up the college as a social organization and to weaken it athletically, for at Oxford they understand what we sometimes do not—that a successful cultivation of sports goes hand in hand with universal good comradeship and mutual loyalty.

The only question remaining was of the actual moral results of the semicloistered life. As for drinking, in spite of the fact that wine is sold to the students at any and all times by the college, and in any and all quantities, there seemed to be less excessive indulgence than, for instance, at Harvard or at Yale. And the fact that what there was took place for the most part within the college walls was certainly most fortunate. When fellows are turned loose for their jubilations amid the florid vices of a great city, as is often the case with us, the consequences to their general morality are sometimes the most hideous. The lives of the men in English colleges are clean, incredibly clean. The few men to whom immorality seems inevitable—and such are to be found in all communities—have recourse to London. But as their expeditions take place in daylight and cold blood, and are, except at a great risk, cut short when the last evening train leaves Paddington shortly after dinner, it is not possible to carry them off with that dazzling air of the man of the world that in America lures so many silly freshmen into dissipations for which they have no natural inclination.

It will be seen that the English college affords those peculiar advantages of community life—eating, sleeping, work, and play—that with us are confined to fraternities and clubs, and where these are in their very nature exclusive the college is consciously and effectively inclusive. The very fact of being at Oxford insures one a well-ordered life and ample opportunity for making friends. Society life, as we know it, is obviously super-

fluous. The social organizations in a college are, for the most part, for the promotion of recognized undergraduate activities—athletics, debating, etc.—and are open to all who are qualified for membership. Each college, to be sure, is likely to have its wine club, membership in which is a purely social distinction; and in the university, as a whole, there are, as in American universities, many exclusive organizations most pleasant and useful to belong to. But their evil effects are annulled by the fact that the life in the colleges is so admirably adapted to supplying all normal social wants. The college is a man's home, while the university is, like the city he lives in, full of interests and activities which it is pleasant but not necessary to form a part of. And here is the point of chief moment. By the very conditions of residence in colleges the members of the exclusive societies come into daily contact, each with the life of the college he belongs to, and the esprit de corps of the college is so strong that they seldom or never cease to be loyal to its interests. No matter how distinguished a varsity oarsman may be, he has the keenest interest in the boating reputation of his college, as the annual bumping races testify. And socially it is the same. The news of the university at large is first reported and discussed over afternoon tea at the great university society, Vincent's; by dinner time it has been brought into the dining-halls of all the great colleges. In an incredibly short time all undergraduate news and the judgments upon it of the men best qualified to judge ramify the college, and men who seldom stir beyond the college walls are brought closely in touch with the innermost spirit of the university life. Here again the compact communities within those college walls—so terrible to Americans—make possible a freedom of interplay of all social forces unknown at Harvard or Yale.

The real Union of Oxford, social, athletic, and intellectual, exists quite apart from the so-called Oxford Union; it results from the nice adjustment between the residential life of the colleges and the social life of the university. Thus Oxford and Cambridge combine the intellectual advantages of a large university with the social advantages possible in a small college.

THE SOCIAL VALUE OF THE COLLEGE-BRED [1]

WILLIAM JAMES

It has been said that William James wrote on psychological subjects like a novelist, while his brother, Henry James, wrote as a psychologist in his novels. The two men taken together furnish an interesting illustration of the importance of style in writing. William James was born in New York City in 1842. He was educated at Harvard University, where from 1872 until his death in 1910 he served upon the faculty of the Medical School and later in the Department of Philosophy. William James was one of the leaders in developing the new psychology by the introduction of the experimental method. He was one of the great triumvirate of Emerson Hall, of which Josiah Royce and George H. Palmer were the other two and with whom was associated for many years a fourth, Hugo Munsterberg. In philosophy he was the leading exponent of pragmatism in America. Harvard men recall with appreciation his spirited tilts with Royce, who was in philosophy an avowed idealist.

OF what use is a college training? We who have had it seldom hear the question raised—we might be a little nonplussed to answer it offhand. A certain amount of meditation has brought me to this as the pithiest reply which I myself can give: The best claim that a college education can possibly make on your respect, the best thing it can aspire to accomplish for you, is this: that it should help you to know a good man when you see him. This is as true of women's as of men's colleges; but that it is neither a joke nor a one-sided abstraction I shall now endeavor to show.

What talk do we commonly hear about the contrast between college education and the education which busi-

[1] An address before The Association of American Alumnæ, at Radcliffe College, November 7, 1907. Reprinted by permission of *McClure's Magazine*.

ness or technical or professional schools confer? The college education is called higher because it is supposed to be so general and so disinterested. At the "schools" you get a relatively narrow practical skill, you are told, whereas the "colleges" give you the more liberal culture, the broader outlook, the historical perspective, the philosophic atmosphere, or something which phrases of that sort try to express. You are made into an efficient instrument for doing a definite thing, you hear, at the schools; but, apart from that, you may remain a crude and smoky kind of petroleum, incapable of spreading light. The universities and colleges, on the other hand, although they may leave you less efficient for this or that practical task, suffuse your whole mentality with something more important than skill. They redeem you, make you well-bred; they make "good company" of you mentally. If they find you with a naturally boorish or caddish mind, they cannot leave you so, as a technical school may leave you. This, at least, is pretended; this is what we hear among college-trained people when they compare their education with every other sort. Now, exactly how much does this signify?

It is certain, to begin with, that the narrowest trade or professional training does something more for a man than to make a skilful, practical tool of him—it makes him also a judge of other men's skill. Whether his trade be pleading at the bar or surgery or plastering or plumbing, it develops a critical sense in him for that sort of occupation. He understands the difference between second-rate and first-rate work in his whole branch of industry; he gets to know a good job in his own line as soon as he sees it; and getting to know this in his own line, he gets a faint sense of what good work may mean anyhow, that may, if circumstances favor, spread into

his judgments elsewhere. Sound work, clean work, finished work; feeble work, slack work, sham work—these words express an identical contrast in many different departments of activity. In so far forth, then, even the humblest manual trade may beget in one a certain small degree of power to judge of good work generally.

Now, what is supposed to be the line of us who have the higher college training? Is there any broader line—since our education claims primarily not to be "narrow"—in which we also are made good judges between what is first-rate and what is second-rate only? What is especially taught in the colleges has long been known by the name of the "humanities," and these are often identified with Greek and Latin. But it is only as literatures, not as languages, that Greek and Latin have any general humanity value; so that in a broad sense the humanities mean literature primarily, and in a still broader sense the study of masterpieces in almost any field of human endeavor. Literature keeps the primacy; for it not only consists of masterpieces, but is largely about masterpieces, being little more than an appreciable chronicle of human master-strokes, so far as it takes the form of criticism and history. You can give humanistic value to almost anything by teaching it historically. Geology, economics, mechanics are humanities when taught with reference to the successive achievements of the geniuses to which these sciences owe their being. Not taught thus, literature remains grammar, art a catalogue, history a list of dates, and natural science a sheet of formulas and weights and measures.

The sifting of human creations!—nothing less than this is what we ought to mean by the humanities. Essentially this means biography; what our colleges should teach is, therefore, biographical history, that not of poli-

tics merely, but of anything and everything so far as human efforts and conquests are factors that have played their part. Studying in this way, we learn what types of activity have stood the test of time; we acquire standards of the excellent and durable. All our arts and sciences and institutions are but so many quests of perfection on the part of men; and when we see how diverse the types of excellence may be, how various the tests, how flexible the adaptations, we gain a richer sense of what the terms "better" and "worse" may signify in general. Our critical sensibilities grow both more acute and less fanatical. We sympathize with men's mistakes even in the act of penetrating them; we feel the pathos of lost causes and misguided epochs even while we applaud what overcame them.

Such words are vague and such ideas are inadequate, but their meaning is unmistakable. What the colleges—teaching humanities by examples which may be special, but which must be typical and pregnant—should at least try to give us, is a general sense of what, under various disguises, superiority has always signified and may still signify. The feeling for a good human job anywhere, the admiration of the really admirable, the disesteem of what is cheap and trashy and impermanent—this is what we call the critical sense, the sense for ideal values. It is the better part of what men know as wisdom. Some of us are wise in this way naturally and by genius; some of us never become so. But to have spent one's youth at college in contact with the choice and rare and precious, and yet still to be a blind prig or vulgarian, unable to scent out human excellence or to divine it amid its accidents, to know it only when ticketed and labeled and forced on us by others, this indeed should be accounted the very calamity and shipwreck of a higher education.

The sense for human superiority ought, then, to be considered our line, as boring subways is the engineer's line and the surgeon's is appendicitis. Our colleges ought to have lit up in us a lasting relish for the better kind of man, a loss of appetite for mediocrities, and a disgust for cheap jacks. We ought to smell, as it were, the difference of quality in men and their proposals when we enter the world of affairs about us. Expertness in this might well atone for some of our awkwardness at accounts, for some of our ignorance of dynamos. The best claim we can make for the higher education, the best single phrase in which we can tell what it ought to do for us, is, then, exactly what I said: it should enable us to know a good man when we see him.

That the phrase is anything but an empty epigram follows from the fact that if you ask in what line it is most important that a democracy like ours should have its sons and daughters skilful, you see that it is this line more than any other. "The people in their wisdom"—this is the kind of wisdom most needed by the people. Democracy is on its trial, and no one knows how it will stand the ordeal. Abounding about us are pessimistic prophets. Fickleness and violence used to be, but are no longer, the vices which they charge to democracy. What its critics now affirm is that its preferences are inveterately for the inferior. So it was in the beginning, they say, and so it will be world without end. Vulgarity enthroned and institutionalized, elbowing everything superior from the highway, this, they tell us, is our irremediable destiny; and the picture papers of the European continent are already drawing Uncle Sam with the hog instead of the eagle for his heraldic emblem. The privileged aristocracies of the foretime, with all their iniquities, did at least preserve some taste for higher human quality

and honor certain forms of refinement by their enduring traditions. But when democracy is sovereign, its doubters say, nobility will form a sort of invisible church, and sincerity and refinement, stripped of honor, precedence, and favor, will have to vegetate on sufferance in private corners. They will have no general influence. They will be harmless eccentricities.

Now, who can be absolutely certain that this may not be the career of democracy? Nothing future is quite secure; states enough have inwardly rotted; and democracy as a whole may undergo self-poisoning. But, on the other hand, democracy is a kind of religion, and we are bound not to admit its failure. Faiths and utopias are the noblest exercise of human reason, and no one with a spark of reason in him will sit down fatalistically before the croaker's picture. The best of us are filled with the contrary vision of a democracy stumbling through every error till its institutions glow with justice and its customs shine with beauty. Our better men shall show the way and we shall follow them; so we are brought round again to the mission of the higher education in helping us to know the better kind of man whenever we see him.

The notion that a people can run itself and its affairs anonymously is now well known to be the silliest of absurdities. Mankind does nothing save through initiatives on the part of inventors, great or small, and imitation by the rest of us—these are the sole factors active in human progress. Individuals of genius show the way and set the patterns, which common people then adopt and follow. The rivalry of the patterns is the history of the world. Our democratic problem thus is statable in ultrasimple terms: Who are the kind of men from whom our majorities shall take their cue? Whom shall

they treat as rightful leaders? We and our leaders are the *x* and the *y* of the equation here; all other historic circumstances, be they economical, political, or intellectual, are only the background of occasion on which the living drama works itself out between us.

In this very simple way does the value of our educated class define itself: we more than others should be able to divine the worthier and better leaders. The terms here are monstrously simplified, of course, but such a bird's-eye view lets us immediately take our bearings. In our democracy, where everything else is so shifting, we alumni and alumnæ of the colleges are the only permanent presence that corresponds to the aristocracy in older countries. We have continuous traditions, as they have; our motto, too, is *noblesse oblige;* and, unlike them, we stand for ideal interests solely, for we have no corporate selfishness and wield no powers of corruption. We ought to have our own class consciousness. "Les intellectuels!" What prouder club name could there be than this one, used ironically by the party of "red blood," the party of every stupid prejudice and passion, during the anti-Dreyfus craze, to satirize the men in France who still retained some critical sense and judgment? Critical sense, it has to be confessed, is not an exciting term, hardly a banner to carry in processions. Affections for old habit, currents of self-interest, and gales of passion are the forces that keep the human ship moving; and the pressure of the judicious pilot's hand upon the tiller is a relatively insignificant energy. But the affections, passions, and interests are shifting, successive, and distraught; they blow in alternation while the pilot's hand is steadfast. He knows the compass, and, with all the leeways he is obliged to tack toward, he always makes some headway. A small force, if it never lets up, will

accumulate effects more considerable than those of much greater forces if these work inconsistently. The ceaseless whisper of the more permanent ideals, the steady tug of truth and justice, give them but time, *must* warp the world in their direction.

This bird's-eye view of the general steering function of the college-bred amid the driftings of democracy ought to help us to a wider vision of what our colleges themselves should aim at. If we are to be the yeast-cake for democracy's dough, if we are to make it rise with culture's preferences, we must see to it that culture spreads broad sails. We must shake the old double reefs out of the canvas into the wind and sunshine, and let in every modern subject, sure that any subject will prove humanistic, if its setting be kept only wide enough.

Stevenson says somewhere to his reader: "You think you are just making this bargain, but you are really laying down a link in the policy of mankind." Well, your technical school should enable you to make your bargain splendidly; but your college should show you just the place of that kind of bargain—a pretty poor place, possibly—in the whole policy of mankind. That is the kind of liberal outlook, of perspective, of atmosphere, which should surround every subject as a college deals with it.

We of the colleges must eradicate a curious notion which numbers of good people have about such ancient seats of learning as Harvard. To many ignorant outsiders that name suggests little more than a kind of sterilized conceit and incapacity for being pleased. In Edith Wyatt's exquisite book of Chicago sketches called *Every One His Own Way* there is a couple who stand for culture in the sense of exclusiveness, Richard Elliot and his feminine counterpart—feeble caricatures of mankind,

unable to know any good thing when they see it, incapable of enjoyment unless a printed label gives them leave. Possibly this type of culture may exist near Cambridge and Boston; there may be specimens there, for priggishness is just like painters' colic or any other trade disease. But every good college makes its students immune against this malady, of which the microbe haunts the neighborhood-printed pages. It does so by its general tone being too hearty for the microbe's life. Real culture lives by sympathies and admirations, not by dislikes and disdains; under all misleading wrappings it pounces unerringly upon the human core. If a college, through the inferior human influences that have grown regnant there, fails to catch the robuster tone, its failure is colossal, for its social function stops; democracy gives it a wide berth, turns toward it a deaf ear.

"Tone," to be sure, is a terribly vague word to use, but there is no other, and this whole meditation is over questions of tone. By their tone are all things human either lost or saved. If democracy is to be saved it must catch the higher, healthier tone. If we are to impress it with our preferences, we ourselves must use the proper tone, which we, in turn, must have caught from our own teachers. It all reverts in the end to the action of innumerable imitative individuals upon each other and to the question of whose tone has the highest spreading power. As a class, we college graduates should look to it that ours has spreading power. It ought to have the highest spreading power.

In our essential function of indicating the better men, we now have formidable competitors outside. *McClure's Magazine,* the *American Magazine, Collier's Weekly,* and, in its fashion, the *World's Work,* constitute together a real popular university along this very line. It would

be a pity if any future historian were to have to write words like these: "By the middle of the twentieth century the higher institutions of learning had lost all influence over public opinion in the United States. But the mission of raising the tone of democracy, which they had proved themselves so lamentably unfitted to exert, was assumed with rare enthusiasm and prosecuted with extraordinary skill and success by a new educational power; and for the clarification of their human sympathies and elevation of their human preferences, the people at large acquired the habit of resorting exclusively to the guidance of certain private literary adventures, commonly designated in the market by the affectionate name of ten-cent magazines."

Must not we of the colleges see to it that no historian shall every say anything like this? Vague as the phrase of knowing a good man when you see him may be, diffuse and indefinite as one must leave its application, is there any other formula that describes so well the result at which our institutions *ought* to aim? If they do that, they do the best thing conceivable. If they fail to do it, they fail in very deed. It surely is a fine synthetic formula. If our faculties and graduates could once collectively come to realize it as the great underlying purpose toward which they have always been more or less obscurely groping, a great clearness would be shed over many of their problems; and, as for their influence in the midst of our social system, it would embark upon a new career of strength.

THE MORAL EQUIVALENT OF WAR[1]

WILLIAM JAMES

THE war against war is going to be no holiday excursion or camping party. The military feelings are too deeply grounded to abdicate their place among our ideals until better substitutes are offered than the glory and shame that come to nations as well as to individuals from the ups and downs of politics and the vicissitudes of trade. There is something highly paradoxical in the modern man's relation to war. Ask all our millions, north and south, whether they would vote now (were such a thing possible) to have our war for the Union expunged from history, and the record of a peaceful transition to the present time substituted for that of its marches and battles, and probably hardly a handful of eccentrics would say yes. Those ancestors, those efforts, those memories and legends are the most ideal part of what we now own together, a sacred spiritual possession worth more than all the blood poured out. Yet ask those same people whether they would be willing in cold blood to start another civil war now to gain another similar possession, and not one man or woman would vote for the proposition. In modern eyes, precious though wars may be, they must not be waged solely for the sake of the ideal harvest. Only when forced upon one, only when

[1] First published by the American Association of International Conciliation, February, 1910. Reprinted from *Memories and Studies* by William James, through the courtesy of the publishers, Longmans, Green & Company.

This is the last formal work of the author, and was published shortly before his death.

an enemy's injustice leaves us no alternative, is a war now thought permissible.

It was not thus in ancient times. The earlier men were hunting men, and to hunt a neighboring tribe, kill the males, loot the village and possess the females, was the most profitable, as well as the most exciting, way of living. Thus were the more martial tribes selected, and in chiefs and peoples a pure pugnacity and love of glory came to mingle with the more fundamental appetite for plunder.

Modern war is so expensive that we feel trade to be a better avenue to plunder; but modern man inherits all the innate pugnacity and all the love of glory of his ancestors. Showing war's irrationality and horror is of no effect upon him. The horrors make the fascination. War is the strong life; it is life *in extremis;* war taxes are the only ones men never hesitate to pay, as the budgets of all nations show us.

History is a bath of blood. The Iliad is one long recital of how Diomedes and Ajax, Sarpedon and Hector killed. No detail of the wounds they made is spared us, and the Greek mind fed upon the story. Greek history is a panorama of jingoism and imperialism—war for war's sake, all the citizens being warriors. It is horrible reading, because of the irrationality of it all—save for the purpose of making "history"—and the history is that of the utter ruin of a civilization in intellectual respects perhaps the highest the earth has ever seen.

Those wars were purely piratical. Pride, gold, women, slaves, excitement were the only motives. In the Peloponnesian war, for example, the Athenians asked the inhabitants of Melos (the island where the "Venus of Milo" was found), hitherto neutral, to own their lord-

ship. The envoys meet and hold a debate, which Thucydides gives in full, and which for sweet reasonableness of form would have satisfied Matthew Arnold. "The powerful exact what they can," said the Athenians, "and the weak grant what they must." When the Meleans say that sooner than be slaves they will appeal to the gods, the Athenians reply: "Of the gods we believe, and of men we know that, by a law of their nature, wherever they can rule they will. This law was not made by us, and we are not the first to have acted upon it; we did but inherit it, and we know that you and all mankind, if you were as strong as we are, would do as we do. So much for the gods; we have told you why we expect to stand as high in their good opinion as you." Well, the Meleans still refused, and their town was taken. "The Athenians," Thucydides quietly says, "thereupon put to death all who were of military age and made slaves of the women and children. They then colonized the island, sending thither five hundred settlers of their own."

Alexander's career was piracy pure and simple, nothing but an orgy of power and plunder, made romantic by the character of the hero. There was no rational principle in it, and the moment he died his generals and governers attacked one another. The cruelty of those times is incredible. When Rome finally conquered Greece, Paulus Æmilius was told by the Roman Senate to reward his soldiers for their toil by "giving" them the old kingdom of Epirus. They sacked seventy cities and carried off a hundred and fifty thousand inhabitants as slaves. How many they killed I know not; but in Etolia they killed all the senators, five hundred and fifty in number. Brutus was "the noblest Roman of them

all," but to reanimate his soldiers on the eve of Philippi he similarly promises to give them the cities of Sparta and Thessalonica to ravage, if they win the fight.

Such was the gory nurse that trained societies to cohesiveness. We inherit the warlike type; and for most of the capacities of heroism that the human race is full of we have to thank this cruel history. Dead men tell no tales, and if there were any tribes of other type than this they have left no survivors. Our ancestors have bred pugnacity into our bone and marrow, and thousands of years of peace won't breed it out of us. The popular imagination fairly fattens on the thought of wars. Let public opinion once reach a certain fighting pitch, and no ruler can withstand it. In the Boer war both governments began with bluff, but couldn't stay there; the military tension was too much for them. In 1898 our people had read the word WAR in letters three inches high for three months in every newspaper. The pliant politician McKinley was swept away by their eagerness, and our squalid war with Spain became a necessity.

At the present day civilized opinion is a curious mental mixture. The military instincts and ideals are as strong as ever, but are confronted by reflective criticisms which sorely curb their ancient freedom. Innumerable writers are showing up the bestial side of military service. Pure loot and mastery seem no longer morally avowable motives, and pretexts must be found for attributing them solely to the enemy. England and we, our army and navy authorities repeat without ceasing, arm solely for "peace," Germany and Japan it is who are bent on loot and glory. "Peace" in military mouths today is a synonym for "war expected." The word has become a pure provocative, and no government wishing peace sincerely should allow it ever to be printed in a newspaper.

Every up-to-date dictionary should say that "peace" and "war" mean the same thing, now *in posse,* now *in actu.* It may even reasonably be said that the intensely sharp competitive preparation for war by the nations is the real war, permanent, unceasing; and that the battles are only a sort of public verification of the mastery gained during the "peace" interval.

It is plain that on this subject civilized man has developed a sort of double personality. If we take European nations, no legitimate interest of any one of them would seem to justify the tremendous destructions which a war to compass it would necessarily entail. It would seem as though common sense and reason ought to find a way to reach agreement in every conflict of honest interests. I myself think it our bounden duty to believe in such international rationality as possible. But, as things stand, I see how desperately hard it is to bring the peace party and the war party together, and I believe that the difficulty is due to certain deficiencies in the program of pacificism which set the militarist imagination strongly, and to a certain extent justifiably, against it. In the whole discussion both sides are on imaginative and sentimental ground. It is but one utopia against another, and everything one says must be abstract and hypothetical. Subject to this criticism and caution, I will try to characterize in abstract strokes the opposite imaginative forces, and point out what to my own very fallible mind seems the best utopian hypothesis, the most promising line of conciliation.

In my remarks, pacificist though I am, I will refuse to speak of the bestial side of the war régime (already done justice to by many writers) and consider only the higher aspects of militaristic sentiment. Patriotism no one thinks discreditable; nor does any one deny that war

is the romance of history. But inordinate ambitions are the soul of every patriotism, and the possibility of violent death the soul of all romance. The militarily patriotic and romantic-minded everywhere, and especially the professional military class, refuse to admit for a moment that war may be a transitory phenomenon in social evolution. The notion of a sheep's paradise like that revolts, they say, our higher imagination. Where then would be the steeps of life? If war had ever stopped, we should have to reinvent it, on this view, to redeem life from flat degeneration.

Reflective apologists for war at the present day all take it religiously. It is a sort of sacrament. Its profits are to the vanquished as well as to the victor; and quite apart from any question of profit, it is an absolute good, we are told, for it is human nature at its highest dynamic. Its "horrors" are a cheap price to pay for rescue from the only alternative supposed, of a world of clerks and teachers, of co-education and zoöphily, of "consumer's leagues" and "associated charities," of industrialism unlimited and feminism unabashed. No scorn, no hardness, no valor any more! Fie upon such a cattleyard of a planet!

So far as the central essence of this feeling goes, no healthy-minded person, it seems to me, can help to some degree partaking of it. Militarism is the great preserver of our ideals of hardihood, and human life with no use for hardihood would be contemptible. Without risks or prizes for the darer, history would be insipid indeed; and there is a type of military character which every one feels that the race should never cease to breed, for every one is sensitive to its superiority. The duty is incumbent on mankind, of keeping military characters in stock—of keeping them, if not for use, then as ends in them-

selves and as pure pieces of perfection—so that Roosevelt's weaklings and mollycoddles may not end by making everything else disappear from the face of nature.

This natural sort of feeling forms, I think, the innermost soul of army writings. Without any exception known to me, militarist authors take a highly mystical view of their subject, and regard war as a biological or sociological necessity, uncontrolled by ordinary psychological checks and motives. When the time of development is ripe the war must come, reason or no reason, for the justifications pleaded are invariably fictitious. War is, in short, a permanent human *obligation.* General Homer Lea, in his recent book, *The Valor of Ignorance,* plants himself squarely on this ground. Readiness for war is for him the essence of nationality, and ability in it the supreme measure of the health of nations.

Nations, General Lea says, are never stationary; they must necessarily expand or shrink, according to their vitality or decrepitude. Japan now is culminating; and by the fatal law in question it is impossible that her statesmen should not long since have entered, with extraordinary foresight, upon a vast policy of conquest, the game in which the first moves were her wars with China and Russia and her treaty with England, and of which the final objective is the capture of the Philippines, the Hawaiian Islands, Alaska, and the whole of our coast west of the Sierra Passes. This will give Japan what her ineluctable vocation as a state absolutely forces her to claim, the possession of the entire Pacific Ocean; and to oppose these deep designs we Americans have, according to our author, nothing but our conceit, our ignorance, our commercialism, our corruption, and our feminism. General Lea makes a minute technical comparison of the military strength which we at present could oppose to

the strength of Japan, and concludes that the islands, Alaska, Oregon, and Southern California, would fall almost without resistance, that San Francisco must surrender in a fortnight to a Japanese investment, that in three or four months the war would be over, and our Republic, unable to regain what it had heedlessly neglected to protect sufficiently, would then "disintegrate" until perhaps some Cæsar should arise to weld us again into a nation.

A dismal forecast indeed! Yet not unplausible, if the mentality of Japan's statesmen be of the Cæsarian type of which history shows so many examples, and which is all that General Lea seems able to imagine. But there is no reason to think that women can no longer be the mothers of Napoleonic or Alexandrian characters; and if these come in Japan and find their opportunity, just such surprises as *The Valor of Ignorance* paints may lurk in ambush for us. Ignorant as we still are of the innermost recesses of Japanese mentality, we may be foolhardy to disregard such possibilities.

Other militarists are more complex and more moral in their considerations. The *Philosophie des Krieges,* by S. R. Steinmetz, is a good example. War, according to this author, is an ordeal instituted by God, who weighs the nations in its balance. It is the essential form of the state, and the only function in which peoples can employ all their powers at once and convergently. No victory is possible save as the resultant of a totality of virtues, no defeat for which some vice or weakness is not responsible. Fidelity, cohesiveness, tenacity, heroism, conscience, education, inventiveness, economy, wealth, physical health and vigor; there isn't a moral or intellectual point of superiority that doesn't tell, when God holds his assizes and hurls the peoples upon one another. *Die*

Weltgeschichte ist das Weltgericht; and Dr. Steinmetz does not believe that in the long run chance and luck play any part in apportioning the issues.

The virtues that prevail, it must be noted, are virtues anyhow, superiorities that count in peaceful as well as in military competition; but the strain on them, being infinitely intenser in the latter case, makes war infinitely more searching as a trial. No ordeal is comparable to its winnowings. Its dread hammer is the welder of men into cohesive states, and nowhere but in such states can human nature adequately develop its capacity. The only alternative is "degeneration."

Dr. Steinmetz is a conscientious thinker, and his book, short as it is, takes much into account. Its upshot can, it seems to me, be summed up in Simon Patten's word, that mankind was nursed in pain and fear, and that the transition to a "pleasure economy" may be fatal to a being wielding no powers of defense against its disintegrative influences. If we speak of the "fear of emancipation from the fear régime," we put the whole situation into a single phrase; fear regarding ourselves now taking the place of the ancient fear of the enemy.

Turn the fear over as I will in my mind, it all seems to lead back to two unwillingnesses of the imagination, one esthetic, and the other moral: unwillingness, first to envisage a future in which army life, with its many elements of charm, shall be forever impossible, and in which the destinies of peoples shall nevermore be decided quickly, thrillingly, and tragically, by force, but only gradually and insipidly by "evolution"; and, secondly, unwillingness to see the supreme theater of human strenuousness closed, and the splendid military aptitudes of men doomed to keep always in a state of latency and never show themselves in action. These insistent unwill-

ingnesses, no less than other esthetic insistencies, have, it seems to me, to be listened to and respected. One cannot meet them effectively by mere counter-insistency on war's expensiveness and horror. The horror makes the thrill; and when the question is of getting the extremest and supremest out of human nature, talk of expense sounds ignominious. The weakness of so much merely negative criticism is evident; pacificism makes no converts from the military party. The military party denies neither the bestiality nor the horror, nor the expense; it only says that these things tell but half the story. It only says that war is *worth* them; that, taking human nature as a whole, its wars are its best protection against its weaker and more cowardly self, and that mankind cannot *afford* to adopt a peace economy.

Pacificists ought to enter more deeply into the esthetical and ethical point of view of their opponents. Do that first in any controversy, says J. J. Chapman; "then move the point," and your opponent will follow. So long as anti-militarists propose no substitute for war's disciplinary function, no moral equivalent of war, analogous, as one might say, to the mechanical equivalent of heat, so long they fail to realize the full inwardness of the situation. And as a rule they do fail. The duties, penalties, and sanctions pictured in the utopias they paint are all too weak and tame to touch the military minded. Tolstoi's pacificism is the only exception to this rule, for it is profoundly pessimistic as regards all this world's values and makes the fear of the Lord furnish the moral spur provided elsewhere by the fear of the enemy. But our socialistic peace advocates all believe absolutely in this world's values; and, instead of the fear of the Lord and the fear of the enemy, the only fear they reckon with is the fear of poverty if one be lazy. This weak-

ness pervades all the socialistic literature with which I am acquainted. Even in Lowes Dickinson's exquisite dialogue, high wages and short hours are the only forces invoked for overcoming man's distaste for repulsive kinds of labor. Meanwhile men at large still live as they always have lived, under a pain-and-fear economy —for those of us who live in an ease economy are but an island in the stormy ocean—and the whole atmosphere of present-day utopian literature tastes mawkish and dishwatery to people who still keep a sense for life's more bitter flavors. It suggests, in truth, ubiquitous inferiority.

Inferiority is always with us, and merciless scorn of it is the keynote of the military temper. "Dogs, would you live forever?" shouted Frederick the Great. "Yes," say our utopians, "let us live forever, and raise our level gradually." The best thing about our "inferiors" today is that they are as tough as nails, and physically and morally almost as insensitive. Utopianism would see them soft and squeamish, while militarism would keep their callousness, but transfigure it into a meritorious characteristic, needed by "the service" and redeemed by that from the suspicion of inferiority. All the qualities of a man acquire dignity when he knows that the service of the collectivity that owns him needs them. If proud of the collectivity, his own pride rises in proportion. No collectivity is like an army for nourishing such pride; but it has to be confessed that the only sentiment which the image of pacific cosmopolitan industrialism is capable of arousing in countless worthy breasts is shame at the idea of belonging to such a collectivity. It is obvious that the United States of America as they exist today impress a mind like General Lea's as so much human blubber. Where is the sharpness and precipitousness, the contempt

for life, whether one's own, or another's? Where is the savage "yes" and "no," the unconditional duty? Where is the conscription? Where is the blood tax? Where is anything that one feels honored by belonging to?

Having said thus much in preparation, I will now confess my own utopia. I devoutly believe in the reign of peace and in the gradual advent of some sort of a socialistic equilibrium. The fatalistic view of the war function is to me nonsense, for I know that war-making is due to definite motives and subject to prudential checks and reasonable criticisms, just like any other form of enterprise. And when whole nations are the armies, and the science of destruction vies in intellectual refinement with the sciences of production, I see that war becomes absurd and impossible from its own monstrosity. Extravagant ambitions will have to be replaced by reasonable claims, and nations must make common cause against them. I see no reason why all this should not apply to yellow as well as to white countries, and I look forward to a future when acts of war shall be formally outlawed as between civilized peoples.

All these beliefs of mine put me squarely into the anti-militarist party. But I do not believe that peace either ought to be or will be permanent on this globe, unless the states pacifically organized preserve some of the old elements of army discipline. A permanently successful peace economy cannot be a simple pleasure economy. In the more or less socialistic future towards which mankind seems drifting we must still subject ourselves collectively to these severities which answer to our real position upon this only partly hospitable globe. We must make new energies and hardihoods continue the manliness to which the military mind so faithfully clings. Martial virtues must be the enduring cement; intrepidity,

contempt of softness, surrender of private interest, obedience to command must still remain the rock upon which states are built, unless, indeed, we wish for dangerous reactions against commonwealths fit only for contempt and liable to invite attack whenever a center of crystallization for military-minded enterprise gets formed anywhere in their neighborhood.

The war party is assuredly right in affirming and reaffirming that the martial virtues, although originally gained by the race through war, are absolute and permanent human goods. Patriotic pride and ambition in their military form are, after all, only specifications of a more general competitive passion. They are its first form, but that is no reason for supposing them to be its last form. Men now are proud of belonging to a conquering nation, and without a murmur they lay down their persons and their wealth, if by so doing they may fend off subjection. But who can be sure that other aspects of one's country may not, with time and education and suggestion enough, come to be regarded with similarly effective feelings of pride and shame? Why should men not some day feel that it is worth a blood tax to belong to a collectivity superior in *any* ideal respect? Why should they not blush with indignant shame if the community that owns them is vile in any way whatsoever? Individuals, daily more numerous, now feel this civic passion. It is only a question of blowing on the spark till the whole population gets incandescent, and on the ruins of the old morals of military honor a stable system of morals of civic honor builds itself up. What the whole community comes to believe in grasps the individual as in a vise. The war function has grasped us so far; but constructive interests may some day seem no less imperative, and impose on the individual a hardly lighter burden.

Let me illustrate my idea more concretely. There is nothing to make one indignant in the mere fact that life is hard, that men should toil and suffer pain. The planetary conditions once for all are such, and we can stand it. But that so many men, by mere accidents of birth and opportunity, should have a life of *nothing else* but toil and pain and hardness and inferiority imposed upon them, should have *no* vacation, while others natively no more deserving never get any taste of this campaigning life at all—*this* is capable of arousing indignation in reflective minds. It may end by seeming shameful to all of us that some of us have nothing but campaigning, and others nothing but unmanly ease. If now—and this is my idea—there were instead of military conscription a conscription of the whole youthful population to form for a certain number of years a part of the army enlisted against *Nature,* the injustice would tend to be evened out, and numerous other goods to the commonwealth would follow. The military ideals of hardihood and discipline would be wrought into the growing fiber of the people; no one would remain blind, as the luxurious classes now are blind, to man's real relations to the globe he lives on, and to the permanently sour and hard foundations of his higher life. To coal and iron mines, to freight trains, to fishing fleets in December, to dishwashing, clothes washing, and window washing, to road building and tunnel making, to foundries and stokeholes, and to the frames of skyscrapers would our gilded youths be drafted off, according to their choice, to get the childishness knocked out of them, and to come back into society with healthier sympathies and soberer ideas. They would have paid their blood tax, done their own part in the immemorial human warfare against nature; they would tread the earth more proudly; the women

would value them more highly; they would be better fathers and teachers of the following generation.

Such a conscription, with the state of public opinion that would have required it and the many moral fruits it would bear, would preserve in the midst of a pacific civilization the manly virtues which the military party is so afraid of seeing disappear in peace. We should get toughness without callousness, authority with as little criminal cruelty as possible, and painful work done cheerily because the duty is temporary, and threatens not, as now, to degrade the whole remainder of one's life. I spoke of the "moral equivalent" of war. So far, war has been the only force that can discipline a whole community, and until an equivalent discipline is organized, I believe that war must have its way. But I have no serious doubt that the ordinary prides and shames of social man, once developed to a certain intensity, are capable of organizing such a moral equivalent as I have sketched, or some other just as effective for preserving manliness of type. It is but a question of time, of skilful propagandism, and of opinion-making men seizing historic opportunities.

The martial type of character can be bred without war. Strenuous honor and disinterestedness abound elsewhere. Priests and medical men are in a fashion educated to it, and we should all feel some degree of it imperative if we were conscious of our work as an obligatory service to the state. We should be *owned,* as soldiers are by the army, and our pride would rise accordingly. We could be poor, then, without humiliation, as army officers now are. The only thing needed henceforward is to inflame the civic temper as past history has inflamed the military temper. H. G. Wells, as usual, sees the center of the situation. "In many ways," he says, "military

organization is the most peaceful of activities. When the contemporary man steps from the street of clamorous insincere advertisement, push, adulteration, underselling, and intermittent employment, into the barrack yard, he steps on to a higher social plane, into an atmosphere of service and coöperation and of infinitely more honorable emulations. Here at least men are not flung out of employment to degenerate because there is no immediate work for them to do. They are fed and drilled and trained for better services. Here at least a man is supposed to win promotion by self-forgetfulness and not by self-seeking. And beside the feeble and irregular endowment of research by commercialism, its little short-sighted snatches at profit by innovation and scientific economy, see how remarkable is the steady and rapid development of method and appliances in naval and military affairs! Nothing is more striking than to compare the progress of civil conveniences which has been left almost entirely to the trader, to the progress in military apparatus during the last few decades. The house appliances of today, for example, are little better than they were fifty years ago. A house of today is still almost as ill-ventilated, badly heated by wastful fires, clumsily arranged and furnished as the house of 1858. Houses a couple of hundred years old are still satisfactory places of residence, so little have our standards risen. But the rifle or battleship of fifty years ago was beyond all comparison inferior to those we possess; in power, in speed, in convenience alike. No one has a use for such superannuated things."

Wells adds that he thinks that the conceptions of order and discipline, the tradition of service and devotion, of physical fitness, unstinted exertion, and universal responsibility, which universal military duty is now teaching

European nations, will remain a permanent acquisition when the last ammunition has been used in the fireworks that celebrate the final peace. I believe as he does. It would be simply preposterous if the only force that could work ideals of honor and standards of efficiency into English or American natures should be the fear of being killed by the Germans or the Japanese. Great indeed is Fear; but it is not, as our military enthusiasts believe and try to make us believe, the only stimulus known for awakening the higher ranges of men's spiritual energy. The amount of alteration in public opinion which my utopia postulates is vastly less than the difference between the mentality of those black warriors who pursued Stanley's party on the Congo with their cannibal war cry of "Meat! Meat!" and that of the "general staff" of any civilized nation. History has seen the latter interval bridged over; the former one can be bridged over much more easily.

WHAT IS A COLLEGE FOR?[1]

Woodrow Wilson

Woodrow Wilson, twenty-eighth president of the United States, was born at Staunton, Virginia, December 28, 1856. He was educated at Davidson College, Princeton, the University of Virginia, and Johns Hopkins University. He held professional positions at Bryn Mawr College, Wesleyan University, and Princeton University, in the last named teaching political economy, political science, and jurisprudence. As a teacher he was noted for the simplicity and adequacy with which he illustrated and made clear the difficult phases of the subjects on which he lectured, and also for his direct and intimate methods of appeal to the student. Mr. Wilson was president of Princeton from 1902 to 1910, during which time he made many progressive changes in that university's methods of instruction, especially through his emphasis upon the tutorial system. In 1911 he became governor of New Jersey, in 1913 president of the United States, and in 1917 president for a second term. The World War occurring during his administration, he was at the head of the American Commission to Negotiate Peace, and signed the Peace Treaty in 1919. His writings include, among many other books and published addresses, *Congressional Government, The State, Division and Reunion, Mere Literature and Other Essays,* and *A History of the American People* (in five volumes). *Mere Literature and Other Essays* and his state papers during the War best reveal his powers as a writer.

His style is forceful, direct, clear, stimulating, characterized above all by aptness of word and flexibility of phrase. His most impressive addresses, both from the quality of their form and the importance of their effect upon history "in the making," were the three delivered April 2, 1917, January 8, 1918, and July 4, 1918, respectively, and entitled *The Necessity for War Against Germany, The Fourteen Points of Peace,* and *Four Steps to Peace.* Closely bound up with the Peace Treaty, which President Wilson signed in 1919, was the League of Nations. It is not too much to say that this was the dearest thing to Mr. Wilson's heart. While it was being violently attacked in the United States Senate, the president started on a tour of the United States to take the issue directly to the people. On this trip Mr. Wilson's health broke down and he was taken back to Washington, where, after a lingering illness, he died February 3, 1924. He lies buried in the National Cathedral of St. Albans, District of Columbia.

It may seem singular that at this time of day and in this confident century it should be necessary to ask: What is a college for? But it has become necessary. I take it for granted that there are few real doubts concerning the question in the minds of those who look at the college from the inside and have made themselves responsible for the realization of its serious purposes; but there are many divergent opinions held concerning it by those who, standing on the outside, have pondered the uses of the college in the life of the country; and their many varieties of opinion may very well have created a confusion of counsel in the public mind.

They are, of course, entirely entitled to their independent opinions and have a right to expect that full consideration will be given what they say by those who are in fact responsible. The college is for the use of the nation, not for the satisfaction of those who administer it or for the carrying out of their private views. They may speak as experts and with a very intimate knowledge, but they also speak as servants of the country and must be challenged to give reasons for the convictions they entertain. Controversy, it may be, is not profitable in such matters, because it is so easy, in the face of opposition, to become a partizan of one's own views and exaggerate them in seeking to vindicate and establish them; but an explicit profession of faith cannot fail to clear the air and to assist the thinking both of those who are responsible and of those who only look on and seek to make serviceable comment.

Why, then, should a man send his son to college when school is finished; or why should he advise any youngster in whom he is interested to go to college? What does he expect and desire him to get there? The question might be carried back and asked also with regard to the

higher schools to which lads resort for preparation for college. What are they meant to get there? But it will suffice to center the question on the college. What should a lad go to college for—for work, for the realization of a definite aim, for discipline and a severe training of his faculties, or for relaxation, for the release and exercise of his social powers, for the broadening effects of life in a sort of miniature world in which study is only one among many interests? That is not the only alternative suggested by recent discussions. They also suggest a sharp alternative with regard to the character of the study the college student should undertake. Should he seek at college a general discipline of his faculties, a general awakening to the issues and interests of the modern world, or should he, rather, seek specially and definitely to prepare himself for the work he expects to do after he leaves college, for his support and advancement in the world? The two alternatives are very different. The one asks whether the lad does not get as good a preparation for modern life by being manager of a football team with a complicated program of intercollegiate games and trips away from home as by becoming proficient in mathematics or in history and mastering the abstract tasks of the mind; the other asks whether he is not better prepared by being given the special skill and training of a particular calling or profession, an immediate drill in the work he is to do after he graduates, than by being made a master of his own mind in the more general fields of knowledge to which his subsequent calling will be related, in all probability, only as every undertaking is related to the general thought and experience of the world.

"Learning" is not involved. No one has ever dreamed of imparting learning to undergraduates. It cannot be

done in four years. To become a man of learning is the enterprise of a lifetime. The issue does not rise to that high ground. The question is merely this: Do we wish college to be, first of all and chiefly, a place of mental discipline or only a school of general experience; and, if we wish it to be a place of mental discipline, of what sort do we wish the discipline to be—a general awakening and release of the faculties or a preliminary initiation into the drill of a particular vocation?

These are questions which go to the root of the matter. They admit of no simple and confident answer. Their roots spring out of life and all its varied sources. To reply to them, therefore, involves an examination of modern life and an assessment of the part an educated man ought to play in it—an analysis which no man may attempt with perfect self-confidence. The life of our day is a very complex thing which no man can pretend to comprehend in its entirety.

But some things are obvious enough concerning it. There is an uncommon challenge to effort in the modern world, and all the achievements to which it challenges are uncommonly difficult. Individuals are yoked together in modern enterprise by a harness which is both new and inelastic. The man who understands only some single process, some single piece of work which he has been set to do, will never do anything else, and is apt to be deprived at almost any moment of the opportunity to do even that, because processes change, industry undergoes instant revolutions. New inventions, fresh discoveries, alterations in the markets of the world throw accustomed methods and the men who are accustomed to them out of date and use without pause or pity. The man of special skill may be changed into an unskilled laborer overnight. Moreover, it is a day in which no enterprise stands alone

or independent, but is related to every other and feels changes in all parts of the globe. The men with mere skill, with mere technical knowledge, will be mere servants perpetually, and may at any time become useless servants, their skill gone out of use and fashion. The particular thing they do may become unnecessary or may be so changed that they cannot comprehend or adjust themselves to the change.

These, then, are the things the modern world must have in its trained men, and I do not know where else it is to get them if not from its educated men and the occasional self-developed genius of an exceptional man here and there. It needs, at the top, not a few, but many men with the power to organize and guide. The college is meant to stimulate in a considerable number of men what would be stimulated in only a few if we were to depend entirely upon nature and circumstance. Below the ranks of generalship and guidance, the modern world needs for the execution of its varied and difficult business a very much larger number of men with great capacity and readiness for the rapid and concentrated exertion of a whole series of faculties: planning faculties as well as technical skill, the ability to handle men as well as to handle tools and correct processes, faculties of adjustment and adaptation as well as of precise execution—men of resource as well as knowledge. These are the athletes, the athletes of faculty, of which our generation most stands in need. All through its ranks, besides, it needs masterful men who can acquire a working knowledge of many things readily, quickly, intelligently, and with exactness—things they had not foreseen or prepared themselves for beforehand, and for which they could not have prepared themselves beforehand. Quick apprehension, quick comprehension, quick action are what modern

life puts a premium upon—a readiness to turn this way or that and not lose force or momentum.

To me, then, the question seems to be: Shall the lad who goes to college go there for the purpose of getting ready to be a servant merely, a servant who will be nobody and who may become useless, or shall he go there for the purpose of getting ready to be a master adventurer in the field of modern opportunity?

We must expect hewers of wood and drawers of water to come out of the colleges in their due proportion, of course, but I take it for granted that even the least gifted of them did not go to college with the ambition to be nothing more. And yet one has hardly made the statement before he begins to doubt whether he can safely take anything for granted. Part of the very question we are discussing is the ambition with which young men now go to college. It is a day when a college course has become fashionable—but not for the purpose of learning, not for the purpose of obtaining a definite preparation for anything—no such purpose could become fashionable. The clientage of our colleges has greatly changed since the time when most of the young men who resorted to them did so with a view to entering one or other of the learned professions. Young men who expect to go into business of one kind or another now outnumber among our undergraduates those who expect to make some sort of learning the basis of their work throughout life; and I dare say that they generally go to college without having made any very definite analysis of their aim and purpose in going. Their parents seem to have made as little.

The enormous increase of wealth in the country in recent years, too, has had its effect upon the colleges—not in the way that might have been expected—not, as yet, by changing the standard of life to any very notice-

able extent or introducing luxury and extravagance and vicious indulgence. College undergraduates have usually the freshness of youth about them, out of which there springs a wholesome simplicity, and it is not easy to spoil them or to destroy their natural democracy. They make a life of their own and insist upon the maintenance of its standards. But the increase of wealth has brought into the colleges, in rapidly augmenting numbers, the sons of very rich men, and lads who expect to inherit wealth are not as easily stimulated to effort, are not as apt to form definite and serious purposes, as those who know that they must whet their wits for the struggle of life.

There was a time when the mere possession of wealth conferred distinction; and when wealth confers distinction it is apt to breed a sort of consciousness of opportunity and responsibility in those who possess it and incline them to seek serious achievement. But that time is long past in America. Wealth is common. And, by the same token, the position of the lad who is to inherit it is a peculiarly disadvantageous one, if the standard of success is to rise above mediocrity. Wealth removes the necessity for effort, and yet effort is necessary for the attainment of distinction, and very great effort at that, in the modern world, as I have already pointed out. It would look as if the ordinary lad with expectations were foredoomed to obscurity; for the ordinary lad will not exert himself unless he must.

We live in an age in which no achievement is to be cheaply had. All the cheap achievements, open to amateurs, are exhausted and have become commonplace. Adventure, for example, is no longer extraordinary—which is another way of saying that it is commonplace. Any amateur may seek and find adventure; but it has been sought and had in all its kinds. Restless men, idle men,

chivalrous men, men drawn on by mere curiosity and men drawn on by love of the knowledge that lies outside books and laboratories, have crossed the whole face of the habitable globe in search of it, ferreting it out in corners even, following its by-paths and beating its coverts, and it is nowhere any longer a novelty or distinction to have discovered and enjoyed it. The whole round of pleasure, moreover, has been exhausted time out of mind, and most of it discredited as not pleasure after all, but just an expensive counterfeit, so that many rich people have been driven to devote themselves to expense regardless of pleasure. No new pleasure, I am credibly informed, has been invented within the memory of man. For every genuine thrill and satisfaction, therefore, we are apparently, in this sophisticated world, shut in to work, to modifying and quickening the life of the age. If college be one of the highways to life and achievement, it must be one of the highways to work.

The man who comes out of college into the modern world must, therefore, have got out of it, if he has not wasted four vitally significant years of his life, a quickening and a training which will make him in some degree a master among men. If he has got less, college was not worth his while. To have made it worth his while he must have got such a preparation and development of his faculties as will give him movement as well as mere mechanical efficiency in affairs complex, difficult, and subject to change. The word efficiency has in our day the power to think at the center of it, the power of independent movement and initiative. It is not merely the suitability to be a good tool; it is the power to wield tools, and among the tools are men and circumstances and changing processes of industry, changing phases of life itself. There should be technical schools a great many,

and the technical schools of America should be among the best in the world. The men they train are indispensable. The modern world needs more tools than managers, more workmen than master workmen. But even the technical schools must have some thought of mastery and adaptability in their processes; and the colleges, which are not technical schools, should think of that chiefly. We must distinguish what the college is for without disparaging any other school of any other kind. It is for the training of the men who are to rise above the ranks.

That is what a college is for. What it does, what it requires of its undergraduates and of its teachers, should be adjusted to that conception. The very statement of the object, which must be plain to all who make any distinction at all between a college and a technical school, makes it evident that the college must subject its men to a general intellectual training which will be narrowed to no one point of view, to no one vocation or calling. It must release and quicken as many faculties of the mind as possible—and not only release and quicken them but discipline and strengthen them also by putting them to the test of systematic labor. Work, definite, exacting, long continued, but not narrow or petty or merely rule of thumb, must be its law of life for those who would pass its gates and go out with its authentication.

By a general training I do not mean vague spaces of study, miscellaneous fields of reading, a varied smattering of a score of subjects and the thorough digestion of none. The field of modern knowledge is extremely wide and varied. After a certain number of really fundamental subjects have been studied in the schools, the college undergraduate must be offered a choice of the route he will travel in carrying his studies further. He cannot be shown the whole body of knowledge within a single

curriculum. There is no longer any single highway of learning. The roads that traverse its vast and crowded spaces are not even parallel, and four years is too short a time in which to search them all out. But there is a general program still possible by which the college student can be made acquainted with the field of modern learning by sample, by which he can be subjected to the several kinds of mental discipline—in philosophy, in some one of the great sciences, in some one of the great languages which carry the thought of the world, in history and in politics, which is its framework—which will give him valid naturalization as a citizen of the world of thought, the world of educated men—and no smatterer merely, able barely to spell its constitution out, but a man who has really comprehended and made use of its chief intellectual processes and is ready to lay his mind alongside its tasks with some confidence that he can master them and can understand why and how they are to be performed. This is the general training which should be characteristic of the college, and the men who undergo it ought to be made to undergo it with deep seriousness and diligent labor; not as soft amateurs with whom learning and its thorough tasks are side interests merely, but as those who approach life with the intention of becoming professionals in its fields of achievement.

Just now, where this is attempted, it seems to fail of success. College men, it is said, and often said with truth, come out undisciplined, untrained, unfitted for what they are about to undertake. It is argued, therefore, that what they should have been given was special vocational instruction; that if they had had that they would have been interested in their work while they were undergraduates, would have taken it more seriously, and would have come out of college ready to be used, as they

now cannot be. No doubt that is to be preferred to a scattered and aimless choice of studies, and no doubt what the colleges offer is miscellaneous and aimless enough in many cases; but, at best, these are very hopeful assumptions on the part of those who would convert our colleges into vocational schools. They are generally put forward by persons who do not know how college life and work are now organized and conducted. I do not wonder that they know little of what has happened. The whole thing is of very recent development, at any rate in its elaborate complexity. It is a growth, as we now see it, of the last ten or twelve years; and even recent graduates of our colleges would rub their eyes incredulously to see if they were to stand again on the inside and look at it intimately.

What has happened is, in general terms, this: that the work of the college, the work of its classrooms and laboratories, has become the merely formal and compulsory side of its life, and that a score of other things, lumped under the term "undergraduate activities," have become the vital, spontaneous, absorbing realities for nine out of every ten men who go to college. These activities embrace social, athletic, dramatic, musical, literary, religious, and professional organizations of every kind, besides many organized for mere amusement and some, of great use and dignity, which seek to exercise a general oversight and sensible direction of college ways and customs. Those which consume the most time are, of course, the athletic, dramatic, and musical clubs, whose practices, rehearsals, games, and performances fill the term time and the brief vacations alike. But it is the social organizations into which the thought, the energy, the initiative, the enthusiasm of the largest number of men go, and go in lavish measure.

The chief of these social organizations are residential families—fraternities, clubs, groups of housemates of one kind or another—in which, naturally enough, all the undergraduate activities of the college have their vital center. The natural history of their origin and development is very interesting. They grew up very normally. They were necessary because of what the college did not do.

Every college in America, at any rate every college outside a city, has tried to provide living-rooms for its undergraduates, dormitories in which they can live and sleep and do their work outside the classroom and the laboratory. Very few colleges whose numbers have grown rapidly have been able to supply dormitories enough for all their students, and some have deliberately abandoned the attempt, but in many of them a very considerable proportion of the undergraduates live on the campus, in college buildings. It is a very wholesome thing that they should live thus under the direct influence of the daily life of such a place and, at least in legal theory, under the authority of the university of which the college forms a principal part. But the connection between the dormitory life and the real life of the university, its intellectual tasks and disciplines, its outlook upon the greater world of thought and action which lies beyond, far beyond, the boundaries of campus and classroom, is very meager and shadowy indeed. It is hardly more than atmospheric, and the atmosphere is very attenuated, perceptible only by the most sensitive.

Formerly, in more primitive, and I must say less desirable, days than these in which we have learned the full vigor of freedom, college tutors and proctors lived in the dormitories and exercised a precarious authority. The men were looked after in their rooms and made to keep

hours and observe rules. But those days are happily gone by. The system failed of its object. The lads were mischievous and recalcitrant; those placed in authority over them generally young and unwise; and the rules were odious to those whom they were meant to restrain. There was the atmosphere of the boarding-school about the buildings, and of a boarding-school whose pupils had outgrown it. Life in college dormitories is much pleasanter now and much more orderly, because it is free and governed only by college opinion, which is a real, not a nominal, master. The men come and go as they please and have little consciousness of any connection with authority or with the governing influences of the university in their rooms, except that the university is their landlord and makes rules such as a landlord may make.

Formerly, in more primitive and less pleasant days, the college provided a refectory or "commons" where all undergraduates had their meals, a noisy family. It was part of the boarding-school life; and the average undergraduate had outgrown it as consciously as he had outgrown the futile discipline of the dormitory. Now nothing of the kind is attempted. Here and there, in connection with some large college which has found that the boarding-houses and restaurants of the town have been furnishing poor food at outrageous prices to those of its undergraduates who could not otherwise provide for themselves, will be found a great "commons," at which hundreds of men take their meals, amid the hurly-burly of numbers, without elegance or much comfort, but nevertheless at a well-spread table where the food is good and the prices moderate. The undergraduate may use it or not as he pleases. It is merely a great coöperative boarding-place, bearing not even a family resemblance to the antique "commons." It is one of the conveniences of

the place. It has been provided by the university authorities, but it might have been provided in some other way and have been quite independent of them; and it is usually under undergraduate management.

Those who do not like the associations or the fare of such a place provide for themselves elsewhere, in clubs or otherwise, generally in fraternity houses. At most colleges there is no such common boarding-place, and all must shift for themselves. It is this necessity in the one case and desire in the other which has created the chief complexity now observable in college life and which has been chiefly instrumental in bringing about that dissociation of undergraduate life from the deeper and more permanent influences of the university which has of recent years become so marked and so significant.

Fraternity chapters were once—and that not so very long ago—merely groups of undergraduates who had bound themselves together by the vows of various secret societies which had spread their branches among the colleges. They had their fraternity rooms, their places of meeting; they were distinguished by well-known badges and formed little coteries distinguishable enough from the general body of undergraduates, as they wished to be; but in all ordinary matters they shared the common life of the place. The daily experiences of the college life they shared with their fellows of all kinds and all connections in an easy democracy; their contacts were the common contacts of the classroom and the laboratory not only, but also of the boarding-house table and of all the usual undergraduate resorts. Members of the same fraternity were naturally enough inclined to associate chiefly with one another, and were often, much too often, inclined, in matters of college "politics," to act as a unit and in their own interest; but they did not live separately.

They did not hold aloof or constitute themselves separate families, living apart in their own houses, in privacy. Now all that is changed. Every fraternity has its own house, equipped as a complete home. The fraternity houses will often be the most interesting and the most beautiful buildings a visitor will be shown when he visits the college. In them members take all their meals, in them they spend their leisure hours and often do their reading—for each house has its library—and in them many of the members, as many as can be accommodated, have their sleeping-rooms and live, because the college has not dormitories enough to lodge them or because they prefer lodging outside the dormitories. In colleges where there are no fraternities, clubs of one sort or another take their places, build homes of their own, enjoy a similar privacy and separateness, and constitute the center of all that is most comfortable and interesting and attractive in undergraduate life.

I am pointing out this interesting and very important development, not for the purpose of criticizing it, but merely to explain its natural history and the far-reaching results it has brought about. The college having determined, wisely enough, some generation or two ago, not to be any longer a boarding school, has resolved itself into a mere teaching machine, with the necessary lecture-rooms and laboratories attached and sometimes a few dormitories, which it regards as desirable but not indispensable, and has resigned into the hands of the undergraduates themselves the whole management of their life outside the classroom; and not only its management but also the setting up of all its machinery of every kind—as much as they please—and the constitution of its whole environment, so that teachers and pupils are not members of one university body but constitute two bodies sharply

distinguished—and the undergraduate body the more highly organized and independent of the two. They parley with one another, but they do not live with one another, and it is much easier for the influence of the highly organized and very self-conscious undergraduate body to penetrate the faculty than it is for the influence of the faculty to permeate the undergraduates.

It was inevitable it should turn out so in the circumstances. I do not wonder that the consequences were not foreseen and that the whole development has crept upon us almost unawares. But the consequences have been very important and very far-reaching. It is easy now to see that if you leave undergraduates entirely to themselves, to organize their own lives while in college as they please—and organize it in some way they must if thus cast adrift—that life, and not the deeper interests of the university, will presently dominate their thoughts, their imaginations, their favorite purposes. And not only that. The work of administering this complex life, with all its organizations and independent interests, successfully absorbs the energies, the initiative, the planning and originating powers of the best men among the undergraduates. It is no small task. It would tax and absorb older men; and only the finer, more spirited, more attractive, more original and effective men are fitted for it or equal to it, where leadership goes by gifts of personality as well as by ability. The very men the teacher most desires to get hold of and to enlist in some enterprise of the mind, the very men it would most reward him to instruct and whose training would count for most in leadership outside of college, in the country at large, and for the promotion of every interest the nation has, the natural leaders and doers, are drawn off and monopolized by these necessary and engaging undergraduate

undertakings. The born leaders and managers and originators are drafted off to "run the college" (it is in fact nothing less), and the classroom, the laboratory, the studious conference with instructors get only the residuum of their attention, only what can be spared of their energy —are secondary matters where they ought to come first. It is the organization that is at fault, not the persons who enter into it and are molded by it. It cannot turn out otherwise in the circumstances. The side-shows are so numerous, so diverting—so important, if you will—that they have swallowed up the circus, and those who perform in the main tent must often whistle for their audiences, discouraged and humiliated.

Such is college life nowadays, and such its relation to college work and the all-important intellectual interests which the colleges are endowed and maintained to foster. I need not stop to argue that the main purposes of education cannot be successfully realized under such conditions. I need not stop to urge that the college was not, and can never be, intended for the uses it is now being put to. A young man can learn to become the manager of a football team or of a residential club, the leader of an orchestra or a glee-club, the star of amateur theatricals, an oarsman or a chess-player without putting himself to the trouble, or his parents to the expense, of four years at a college. These are innocent enough things for him to do and to learn, though hardly very important in the long run; they may, for all I know, make for efficiency in some of the simpler kinds of business; and no wise man who knows college lads would propose to shut them off from them or wish to discourage their interest in them. All work and no play makes Jack not only a dull boy, but may make him a vicious boy as well. Amusement, athletic games, the zest of contest and competition, the challenge there is

in most college activities to the instinct of initiative and the gifts of leadership and achievement—all these are wholesome means of stimulation, which keep young men from going stale and turning to things that demoralize. But they should not assume the front of the stage, where more serious and lasting interests are to be served. Men cannot be prepared by them for modern life.

The college is meant for a severer, more definite discipline than this: a discipline which will fit men for the contests and achievements of an age whose every task is conditioned upon some intelligent and effective use of the mind, upon some substantial knowledge, some special insight, some trained capacity, some penetration which comes from study, not from natural readiness or mere practical experience.

The side-shows need not be abolished. They need not be cast out or even discredited. But they must be subordinated. They must be put in their natural place as diversions, and ousted from their present dignity and preëminence as occupations.

And this can be done without making of the college again a boarding-school. The characteristic of the boarding-school is that its pupils are in all things in tutelage, are under masters at every turn of their life, must do as they are bidden, not in the performance of their set tasks only, but also in all their comings and goings. It is this characteristic that made it impossible and undesirable to continue the life of the boarding-school into the college, where it is necessary that the pupil should begin to show his manhood and make his own career. No one who knows what wholesome and regulated freedom can do for young men ought ever to wish to hale them back to the days of childish discipline and restraint of which the college of our grandfathers was typical. But a new

discipline is desirable, is absolutely necessary, if the college is to be recalled to its proper purpose, its bounden duty. It cannot perform its duty as it is now organized.

The fundamental thing to be accomplished in the new organization is, that, instead of being the heterogeneous congeries of petty organizations it now is, instead of being allowed to go to pieces in a score of fractions free to cast off from the whole as they please, it should be drawn together again into a single university family of which the teachers shall be as natural and as intimate members as the undergraduates. The "life" of the college should not be separated from its chief purposes and most essential objects, should not be contrasted with its duties and in rivalry with them. The two should be but two sides of one and the same thing: the association of men, young and old, for serious mental endeavor and also, in the intervals of work, for every wholesome sport and diversion. Undergraduate life should not be in rivalry and contrast with undergraduate duties; undergraduates should not be merely in attendance upon the college, but parts of it on every side of its life, very conscious and active parts. They should consciously live its whole life—not under masters, as in school, and yet associated in some intimate daily fashion with their masters in learning, so that learning may not seem one thing and life another. The organizations whose objects lie outside study should be but parts of the whole, not set against it, but included within it.

All this can be accomplished by a comparatively simple change of organization which will make master and pupil members of the same free, self-governed family, upon natural terms of intimacy. But how it can be done is not our present interest. That is another story. It is our present purpose merely to be clear what a college is for.

That, perhaps, I have now pointed out with sufficient explicitness. I have shown the incompatibility of the present social organization of our colleges with the realization of that purpose only to add emphasis to the statement of what that purpose is. Once get that clearly established in the mind of the country, and the means of realizing it will readily and quickly enough be found. The object of the college is intellectual discipline and moral enlightenment, and it is the immediate task of those who administer the colleges of the country to find the means and the organization by which that object can be attained. Education is a process and, like all other processes, has its proper means and machinery. It does not consist in courses of study. It consists of the vital assimilation of knowledge; and the mode of life, for the college as for the individual, is nine parts of the digestion.

THE BOOKCASE AT HOME[1]

William Dean Howells

From the year 1872, when his first novel, *Their Wedding Journey,* was published, until his death in 1920, William Dean Howells was the most distinguished of American novelists. He was born in 1837, the year of Emerson's Phi Beta Kappa address on *The American Scholar,* which Oliver Wendell Holmes called our declaration of intellectual independence. Howells's literary life, with the exception of his verse-writing days, which were imitative, was one unbroken protest against following the well-worn path of the European artist in fiction, particularly in romantic fiction. His contribution to critical theory was the elaboration of the idea that the function of the novelist is to represent artistically the life of the commonplace, average man. Howells was a child of his time, and concerned himself, as the politician does, with men of his time as they were, not as they might have been. He was a wise man, but he was also what the wise seldom are, clever. And yet the spirit of the ages descended upon him; he was possessed of the real miracle in human life, a great soul.

Howells was for a time in the consular service of the United States, though chiefly because it afforded him opportunity to observe life and travel abroad. He performed valuable public service as editor of *Harper's Magazine,* which was one of the four leading magazines in the world of that day. He wrote essays, verse, comedies and farces, editorial criticism, but above all, novels of realism and character analysis. *The Rise of Silas Lapham* is still the great novel of the life of the distinctively American business man. Others of his important novels, besides those already mentioned, are *A Chance Acquaintance, A Foregone Conclusion, A Modern Instance, The Lady of the Aroostook,* and *The World of Chance.* His knowledge, his interpretation of life, his method, and his language make his work of permanent literary and social value.

To give an account of one's reading is in some sort to give an account of one's life; and I hope that I shall not offend those who follow me in these papers, if I cannot help speaking of myself in speaking of the authors I

[1] Reprinted, by permission of Miss Mildred Howells, from *My Literary Passions,* published by Harper & Brothers.

must call my masters: my masters not because they taught me this or that directly, but because I had such delight in them that I could not fail to teach myself from them whatever I was capable of learning. I do not know whether I have have been what people call a great reader; I cannot claim even to have been a very wise reader; but I have always been conscious of a high purpose to read much more, and more discreetly, than I have ever really done, and probably it is from the vantage-ground of this good intention that I shall sometimes be found writing here rather than from the facts of the case.

But I am pretty sure that I began right, and that if I had always kept the lofty level which I struck at the outset I should have the right to use authority in these reminiscences without a bad conscience. I shall try not to use authority, however, and I do not expect to speak here of all my reading, whether it has been much or little, but only of those books, or of those authors that I have felt a genuine passion for. I have known such passions at every period of my life, but it is mainly of the loves of my youth that I shall write, and I shall write all the more frankly because my own youth now seems to me rather more alien than that of any other person.

I think that I came of a reading race, which has always loved literature in a way, and in spite of varying fortunes and many changes. From a letter of my great-grandmother's written to a stubborn daughter upon some unfilial behavior, like running away to be married, I suspect that she was fond of the high-colored fiction of her day, for she tells the wilful child that she has "planted a dagger in her mother's heart," and I should not be surprised if it were from this fine-languaged lady

that my grandfather derived his taste for poetry, rather than from his father, who was of a worldly-wiser mind. To be sure he became a Friend by Convincement, as the Quakers say, and so I cannot imagine that he was altogether worldly; but he had an eye to the main chance: he founded the industry of making flannels in the little Welsh town where he lived, and he seems to have grown richer, for his day and place, than any of us have since grown for ours. My grandfather, indeed, was concerned chiefly in getting away from the world and its wickedness. He came to this country early in the century and settled his family in a log-cabin in the Ohio woods, that they might be safe from the sinister influences of the village where he was managing some woolen mills. But he kept his affection for certain poets of the graver, not to say gloomier, sort, and he must have suffered his children to read them, pending that great question of their souls' salvation which was a lifelong trouble to him.

My father, at any rate, had such a decided bent in the direction of literature that he was not content in any of his several economical experiments till he became the editor of a newspaper, which was then the sole means of satisfying a literary passion. His paper, at the date when I began to know him, was a living, comfortable and decent, but without the least promise of wealth in it, or the hope even of a much better condition. I think now that he was wise not to care for the advancement which most of us have our hearts set upon, and that it was one of his finest qualities that he was content with a lot in life where he was not exempt from work with his hands, and yet where he was not so pressed by need but he could give himself at will not only to the things of the spirit, but the things of the mind too.

After a season of skepticism he had become a religious man, like the rest of his race, but in his own fashion, which was not at all the fashion of my grandfather, a Friend who had married out of Meeting, and had ended a perfervid Methodist. My father, who could never get himself converted at any of the camp-meetings where my grandfather often led the forces of prayer to his support, and had at last to be given up in despair, fell in with the writings of Emanuel Swedenborg, and embraced the doctrine of that philosopher with a content that has lasted him all the days of his many years. Ever since I can remember, the works of Swedenborg formed a large part of his library; he read them much himself, and much to my mother, and occasionally a "Memorable Relation" from them to us children. But he did not force them upon our notice, nor urge us to read them, and I think this was very well. I suppose his conscience and his reason kept him from doing so. But in regard to other books, his fondness was too much for him, and when I began to show a liking for literature he was eager to guide my choice.

His own choice was for poetry, and the most of our library which was not given to theology was given to poetry. I call it the library now, but then we called it the bookcase, and that was what literally it was, though I believe that whatever we had called our modest collection of books, it was a larger private collection than any other in the town where we lived. Still it was all held, and shut with glass doors, in a case of very few shelves. It was not considerably enlarged during my childhood, for few books came to my father as editor, and he indulged himself in buying them even more rarely. My grandfather's bookstore (it was also the village drug-store) had then the only stock of literature

for sale in the place; and once, when Harper & Brothers' agent came to replenish it, he gave my father several volumes for review. One of these was a copy of Thomson's *Seasons,* a finely-illustrated edition, whose pictures I knew long before I knew the poetry, and thought them the most beautiful things that ever were. My father read passages of the book aloud, and he wanted me to read it all myself. For the matter of that he wanted me to read Cowper, from whom no one could get anything but good, and he wanted me to read Byron, from whom I could then have got no harm; we get harm from the evil we understand. He loved Burns, too, and he used to read aloud from him, I must own, to my inexpressible weariness. I could not away with that dialect, and I could not then feel the charm of the poet's wit, nor the tender beauty of his pathos. Moore, I could manage better; and when my father read *Lalla Rookh* to my mother I sat up to listen, and entered into all the woes of Iran in the story of the Fire Worshippers. I drew the line at the Veiled Prophet of Khorassan, though I had some sense of the humor of the poet's conception of the critic in Fadladeen. But I liked Scott's poems far better, and got from Ispahan to Edinburgh with a glad alacrity of fancy. I followed the *Lady of the Lake* throughout, and when I first began to contrive verses of my own I found that poem a fit model in mood and meter.

Among other volumes of verse on the top shelf of the bookcase, of which I used to look at the outside without penetrating deeply within, were Pope's translation of the *Iliad* and the *Odyssey,* and Dryden's *Virgil,* pretty little tomes in tree-calf, published by James Crissy in Philadelphia, and illustrated with small copper-plates, which somehow seemed to put the matter hopelessly be-

yond me. It was as if they said to me in so many words that literature which furnished the subjects of such pictures I could not hope to understand, and need not try. At any rate, I let them alone for the time, and I did not meddle with a volume of Shakespeare, in green cloth and cruelly fine print, which overawed me in like manner with its wood-cuts. I cannot say just why I conceived that there was something unhallowed in the matter of the book; perhaps this was a taint from the reputation of the rather profligate young man from whom my father had it. If he were not profligate I ask his pardon. I have not the least notion who he was, but that was the notion I had of him, whoever he was, or wherever he now is. There may never have been such a young man at all; the impression I had may have been pure invention of my own, after the manner of children who do not very distinctly know their dreams from their experiences, and live in the world where both project the same quality of shadow.

There were, of course, other books in the bookcase, which my consciousness made no account of, and I speak only of those I remember. Fiction there was none at all that I can recall, except Poe's *Tales of the Grotesque and the Arabesque* (I long afflicted myself as to what those words meant, when I might easily have asked and found out) and Bulwer's *Last Days of Pompeii,* all in the same kind of binding. History is known, to my young remembrance of that library, by a *History of the United States,* whose dust and ashes I hardily made my way through; and by a *Chronicle of the Conquest of Granada,* by the ever dear and precious Fray Antonio Agapida, whom I was long in making out to be one and the same with Washington Irving.

In school there was as little literature then as there

is now, and I cannot say anything worse of our school reading; but I was not really very much in school, and so I got small harm from it. The printing-office was my school from a very early date. My father thoroughly believed in it, and he had his beliefs as to work, which he illustrated as soon as we were old enough to learn the trade he followed. We could go to school and study, or we could go into the printing-office and work, with an equal chance of learning, but we could not be idle; we must do something, for our souls' sake, though he was willing enough we should play, and he liked himself to go into the woods with us, and to enjoy the pleasures that manhood can share with childhood. I suppose that as the world goes now we were poor. His income was never above twelve hundred a year, and his family was large; but nobody was rich there or then; we lived in the simple abundance of that time and place, and we did not know that we were poor. As yet the unequal modern conditions were undreamed of (who indeed could have dreamed of them forty or fifty years ago?) in the little Southern Ohio town where nearly the whole of my most happy boyhood was passed.

IDOLS [1]

Charles Mills Gayley

One of the most infrequent blessings that this old world has to offer is the scholar who can appeal widely and yet not cheapen the quality or weaken the force of his material by the half-truths and irrelevancies of the average "popularizer." Charles Mills Gayley's writings have been of incalculable service as guides to students, supplying information in attractive manner, disciplining the taste of readers, aiding their judgment, and stimulating them to further inquiry. Professor Gayley was born in Shanghai, China, February 22, 1858. He was educated at Blackheath, England, at Belfast, Ireland, and at the University of Michigan, with graduate study at Giessen and Halle. From 1884 to 1886 he was assistant professor of Latin, and from 1887 to 1889 assistant professor of English and Rhetoric in the University of Michigan. Since 1889 he has been professor of English in the University of California, and for a period of three years dean of the faculties, also, in that university. Professor Gayley is an active member of many learned societies and an honorary member of many others. He has contributed verse and prose to several magazines, including the *Atlantic Monthly, The Nation,* and *The International Quarterly.* He is author of various volumes in æsthetics and criticism, editor and joint author of others, and an able lecturer upon topics of education and literature. Among the volumes which reveal his scholarship as an editor are the five entitled *Representative English Comedies.* The most valuable work in which he was co-author is in two volumes prepared in collaboration with Professor F. N. Scott and entitled *A Guide to the Literature of Æsthetics* and *An Introduction to the Methods and Materials of Literary Criticism.* His most widely circulated book has been *Classic Myths in English Literature.*

AN INDIFFERENT GENERATION

The world of learning was never better worth preparing for. Why is it, then, that from every university in the

[1] From *Idols of Education,* in part a commencement address delivered at the University of Michigan in 1909 as a valedictory to James Burrill Angell, who was retiring from the presidency of the University after a service of thirty-nine years. Reprinted by permission of Charles Mills Gayley, an alumnus of Michigan, and Messrs. Doubleday, Page & Company.

land, and from every serious journal, there goes up the cry, "Our young people were never more indifferent."

How many nights a week does the student spend in pursuits non-academic; how great a proportion of his days? What with so-called "college activities," by which he must prove his allegiance to the university, and social functions by which he must recreate his jaded soul, no margin is left for the one and only college activity—which is study. Class meetings, business meetings, committee meetings, editorial meetings, football rallies, baseball rallies, pajama rallies, vicarious athletics on the bleachers, garrulous athletics in the dining-room and parlor and on the porch, rehearsals of the glee club, rehearsals of the mandolin club and of the banjo, rehearsals for dramatics (a word to stand the hair on end), college dances and class banquets, fraternity dances and suppers, preparations for the dances and banquets, more committees for the preparations; a running up and down the campus for ephemeral items for ephemeral articles in ephemeral papers, a soliciting of advertisements, a running up and down for subscriptions to the dances and the dinners, and the papers and the clubs; a running up and down in college politics, making tickets, pulling wires, adjusting combinations, canvassing for votes—canvassing the girls for votes, spending hours at sorority houses for votes—spending hours at sorority houses for sentiment; talking rubbish unceasingly, thinking rubbish, revamping rubbish —rubbish about high jinks, rubbish about low, rubbish about rallies, rubbish about pseudo-civic honor, rubbish about girls;—what margin of leisure is left for the one activity of the college, which is study?

In Oxford and Cambridge, than which no universities have turned out finer, cleaner, more manly, more highly cultivated, and more practically trained scholars, states-

men, empire builders, or more generous enthusiasts for general athletics and clean sport—in Oxford and Cambridge the purpose is study, and the honors are paid to the scholar. There are no undergraduate newspapers, no class meetings, no college politics, no football rallies, no business managers, no claques for organized applause, no yell leaders, no dances, no social functions of the mass. Social intercourse during term between the sexes is strictly forbidden; and it is a matter of college loyalty to live up to the rule. Of non-academic activities there are but two: athletics and conversation. They are not a function, but a recreation; nor are they limited to specialists whose reputation is professed. Young Oxonians, in general, lead a serene and undistracted, but rich and wholesome life. They cultivate athletics because each is an active devotee of some form of sport. And conversation—in junior commons, in the informal clubs, in study, or in tutor's room—it is an education, a passion, an art.

THE BANDAR-LOG

A foreigner, attending, in an American university, an assembly of student speakers, will be justified in concluding that the university exists for nothing but so-called "student activities." The real purpose of the university will not be mentioned, for usually our undergraduates live two lives—distinct; one utterly non-academic. The non-academic is for them the real; the scholarly an encroachment. The student who regards the scholarly as paramount is deficient in "allegiance to his university."

Athletics, meanwhile, which should play a necessary part in the physical, and therefore spiritual, development of all students, are relegated to ten per cent of the students. The rest assist—on the bleachers. The ninety

per cent are killing two birds with one stone. They are taking second-hand exercise; and, by their grotesque and infantile applause, they are displaying what they call their "loyalty."

Those *noctes cœnæque deum* of history and poetry and philosophical discourse, to the memory of which the older generation reverts with rapture, have faded in this light of common day. In the hurry of mundane pursuit the student rarely halts to read, rarely to consider; rarely to discuss the concerns of the larger life.

President Schurman has recently said that there has been no decline of scholarship in the people's universities, but only in the older institutions of the East, to which rich parents send their sons with the view to the advantages of social position; and that in the people's universities the social standing of students has never cut so much figure as scholarship. The assurance is comfortable; but it obscures the issue. If by "social standing" the president of Cornell means position in the coteries of wealth, fashion, conviviality, it may be that "social standing" bulks larger in the older university than in the university of the state. But the fact is that, in student esteem, East and West, social standing means no such thing; it means the position achieved by prominence in non-academic or "campus" activities. And in student esteem such prominence cuts a far more important figure than that of either wealth or scholarship. Such prominence has been gaining ground for fifteen years. So long as the social pressure of the university is toward mundane pursuits, it will be vain to expect the student to achieve distinction in that for which the university stands.

This false standard of prominence, with its feigned allegiance to the interests of the university, has produced

that class of student which, adapting from the *Jungle Book,* I call the "Bandar-log."

Mowgli had never seen an Indian city before, and though this was almost a heap of ruins it seemed very wonderful and splendid. Some king had built it long ago on a little hill. . . . The Bandar-logs called the place their city, and pretended to despise the jungle people because they lived in the forest. And yet they never knew what the buildings were made for nor how to use them. They would sit in circles in the hall of the King's council-chamber and scratch for fleas and pretend to be men; or they would run in and out of the roofless houses and collect pieces of plaster and old bricks in the corner and forget where they had hidden them, and fight and cry in scuffling crowds, and then break off to play up and down the terraces of the King's garden, where they would shake the rose-trees and the oranges in sport to see the fruit and flowers fall. They explored all the passages and dark tunnels in the palace and the hundreds of little dark rooms, but they never remembered what they had seen and what they had not, and so drifted about in ones and twos or crowds, telling one another that they were doing as men did, or shouting "there are none in the jungle so wise and good and clever and strong and gentle as the Bandar-log." Then they would tire and seek the treetop, hoping the jungle people would notice them . . . and then they joined hands and danced about and sang their foolish songs. "They have no law," said Mowgli to himself, "no hunting call and no leaders." . . . And he could not help laughing when they cried, "We are great, we are free, we are wonderful . . . we all say so, and so it must be true . . . you shall carry our words back to the jungle people that they may notice us in future."

The Bandar-log is with us. Busy to no purpose, imitative, aimless; boastful but unreliant; inquisitive but

quickly losing his interest; fitful, inconsequential, platitudinous, forgetful; noisy, sudden, ineffectual.—The Bandar-log must go.

Because it is the spirit of the American university to prove the things that are new, to hold fast that which is good; to face abuses boldly and to reform them; because I am the son of an American university, and have grown in her teaching, and in my observation of many universities and many schools, to regard the evil as transitory and abuses as remediable, I have ventured in this essay to set down simply, and with a frankness that I trust may not be misconstrued, some of the vagaries of our educational system at the present time, and some of the reasons for their existence. For I am sure that in the recognition of the cause is to be found the means of cure.

THE MAN OF ARGOS

Another class also of students makes, though unconsciously, for the wane of general scholarship—the class of the prematurely vocational. It is not futile, like that of the Bandar-log, but earnest, and with a definite end in view. Still, unwisely guided to immature choice and hasty study of a profession, it not only misses the liberal equipment necessary for the ultimate mastery of life, but indirectly diverts the general scope of education from its true ideals.

The spirit of the Renaissance, says a modern historian of poetry, is portrayed in a picture by Moretto. It is of a young Venetian noble. "The face is that of one in the full prime of life and of great physical strength; very handsome, heavy and yet tremulously sensitive, the large eyes gazing at some thing unseen, and seeming to dream of vastness. On his bonnet is a golden plaque with three

words of Greek inscribed on it—*ἰοὺ λίαν ποθῶ*—"Oh, but I am consumed with excess of desire."

If this be the motto of the Renaissance, what shall we say is the motto of to-day? Not *ἰοὺ λίαν ποθῶ*; no creed of vague insatiable yearning, but rather the *πάντα αὐτίκα ποθῶ*—the lust for immediate and universal possession: as who should cry,

> "I want no little here below,
> I want it all, and quick."

In one of his odes, Pindar, lauding the older times when the Muse had not yet learned to work for hire, breaks off "but now she biddeth us observe the saying of the Man of Argos, 'Money maketh man'"—*χρήματα, χρήματ' ἀνήρ.* If not money, then sudden success—that is the criterion of the Man of Argos today.

The Bandar-log and the Argive retard the advance of scholarship in the university; and not the university alone is responsible for their presence, but the elementary school as well.

THE STAGGERS AND THE CARELESS LAPSE

Of the effectiveness of the public schools in the several states, the universities of each state respectively may judge. From Harvard, Yale, and Princeton to California and Stanford the judgment is a groan. Is the fault with the schools? or is the standard of requirement too high? or is the basis of conclusion in each case too narrow? The reply may best be given by one who examines pupils of all states.

"Probably nowhere else," writes Colonel Larned of the United States Military Academy, in the *North American Review* of September, 1908, "probably nowhere else can the general effectiveness of our public schools be so

well gauged as at the academies at West Point and Annapolis. Their candidates are drawn from every congressional district of every state and territory of the Union, and largely from the class of our citizens who send their children to the primary and high schools supported by the states." The subjects of examination are elementary: algebra, geometry, grammar, composition and literature, geography, and history. "The examinations are written and abundant time is given for their completion, even by those of inferior capacity and preparation. The papers are marked on a scale of one hundred as a maximum, sixty-six being the normal minimum standard of proficiency." Generally speaking, deficiency in one subject constitutes deficiency in the whole examination. Out of 314 candidates who attempted the entrance papers in March, 1908, 265 failed: 56 in one subject, 209 in two or more subjects. Of the failures there were 44 per cent in algebra, 67 per cent in geometry, 37 per cent in grammar, 40 per cent in composition and literature. "Out of the 314 examined mentally it appears that 295, or 90 per cent, had been educated in public schools, and that the average number of years of attendance in these schools was nine years, eleven months. Separating this into primary and secondary attendance, we find that the average attendance in high schools was three years, three months; and in grammar schools, six years, eight months. A hundred and three candidates had private schooling wholly or in part, 135 had college education of one year or more; 189 studied the classics. Of the 135 who had gone so far as a college education of one year or more, 82 failed to enter."

"Altogether," comments the writer, "it is a sorry showing, from whatever standpoint it is viewed. . . . Many of these young men secured their nominations through com-

petitive examinations; and few, if any, could have been taken haphazard, with no regard to qualification and antecedents; while all could have been employed some nine months in private preparation. That 314 youths, nearly all trained in our costly public schools, with an average of almost ten years' attendance (supplemented in the case of one-third of their number by private schooling, and, in the case of 43 per cent by college training) should show 84 per cent of failure and the various deficiencies analyzed above is surely a state of affairs that should make the judicious grieve and our educators sit up and take notice."

"If," continues the compiler of this unanswerable arraignment, "if education is concerned with mental development alone, it is fair to ask: If 16,596,503 boys and girls, taught in our public schools at a cost of $376,996,472, average no better in intellectual attainments than is evidenced by the foregoing, does the result justify the outlay and the ten or more years' apprenticeship of youth it demands?"

The boy enters our colleges "a badly damaged article." One-sidedly prepared, or not prepared at all, he goes through college accumulating courses, but not education; desperately selecting studies least foreign to his slender capability for assimilation, or most easy to slur, or most likely to turn to superficial ends. He is by no means always lazy, nor oblivious that now is the chance of his life; but he has no core of knowledge to which the facts he fumbles may cling, no keen-edged linguistic or scientific tools with which to cut to the heart of the matter; no memory trained and enriched, no taste, no imagination, no judgment balanced by frequent trial, no habits of remorseless application. He has bluff, but not confidence; he has promise, but not power. The subjects of his study

have not been correlated. The goal has been neither discipline nor intrinsic worth. He has probably never studied one thing thoroughly. He has not been guided; he has not been taught; he has not conquered work. He has been distracted; he has been amused. In college he is thrown with comrades of like equipment. None probably has had all the fundamentals requisite to any one study. A heterogeneous concourse, fortuitous, divergent, immane. To the individuals of such a class, no teacher could impart drill or rationally progressive information: not Orbilius, not Erasmus. In the humanities, especially, it is impossible to drive a class abreast. And if the tutor tries tandem, what with one-third springhalt of French, another hamstrung of German, another spavined of Latin, the ninety-and-nine infested with bots prejudicial to Greek, the course is doomed—cast

> "Into the staggers and the careless lapse
> Of youth and ignorance."

We turn out from our American departments of the liberal arts many clean and manly men, noble and earnest women. But how many even of these know the rudiments of one subject thoroughly, can think clearly, reason accurately, express a thought lucidly, effectively, correctly? How many can spell, how many write a letter not illiterate, how many use a diction simple, pure and idiomatic, clearly enounced, justly pronounced? How many know the difference between Sennacherib and a floating rib, the Maid of Orleans and the Maid of Athens, the Witch of Endor and the Widow of Nain, Dionysius and Dionysus, the Jewels of Cornelia and the diamond necklace, the Lion of Judah and the Lion of the North? Or, if some have some vague impression of some of these things, for how many do they possess an historical or

literary flavor? If a speaker refer to Apollyon or the Houyhnhms, to the Delectable Mountains, or Mount Hymettus, or the Horn of Roncesvalles; if he quote a line of Horace, a French bon mot, or a German commonplace; if he refer to the Seven against Thebes, the Electra, the Bucolics, the Télémaque, the Sorrows of Werther, to Giotto's or Botticelli's Spring, to Gargantua or Pompilia, how many eyes light with recognition? I do not mean in an assembly of technical or professional students, but of "liberal" students. And if some students of literature and history have definite acquaintance with some of these things, have they also definite acquaintance with the fundamentals of philosophy, mathematics, and science, no less significant? With what real command of any foreign language do our students go forth? It is well for us that the peoples of Europe are the most courteous of men. Long ago they learned from Aristotle that it was inartistic to laugh at painful impotence or deformity.

If these imperfections hold true of our graduates of literary departments, they hold, so far as elementary culture is concerned, even more frequently true of our vocational students. But those who pursue the practical arts and the sciences have no less occasion to speak, to write, to communicate, expound, convince, persuade than the humanists; they too are working for and with men. To the vocational student the studies that not only instruct but educate, that make not only for knowledge but for power, for efficiency characterized by judgment and taste —to the vocational student the humanities are not, by necessity or immutable decree, alien.

Illiteracy is not a hall-mark exclusively reserved to the student body. Our Ph. D.'s are lamentably prone to error in the use of their own tongue. Of the later crop of

instructors in universities, some say "he don't," "hospi'table," "luckrative," "exqui'site," "minerology"—confessing that "they hadn't ought to"; others never fail, they "fall down"; they never win, they "win out"; they are never at a loss, though they are frequently "up against it." When they lecture in plain clothes, the outcome is a dis'course; when in a dinner jacket, an ad'dress. Recently, a specialist, already teaching in an Eastern college, was highly recommended for an instructorship in a Western university by the authorities of the Eastern university where he had published an ostensibly learned thesis and secured his degree of Doctor of Philosophy. In writing he "refered" to a previous letter, and in conversation suggested that we "leave things go as they are." We did. To rehearse such amenities would be invidious, were they not of everyday occurrence, and the offenders dulled by custom and congenial apathy.

Our graduates are characterized by lack of information, lack of grasp, lack of culture. This is no prejudiced account of the case. It is attested by the verdict of our leaders at the bar, on the bench, in the pulpit, and in the hospital, and by our captains of industry. Also by educated foreigners. Our Rhodes scholars should certainly represent the flower of our scholarship. But even kindly critics in Oxford, while admiring the sociability, good sense, good humor, broad outlook of the American student, will tell you: "The American student is, with few exceptions, deficient in his own language, spoken or written; and has but the smattering of any other. He is more often superficial than ours, and is more easily satisfied. He does not seem to understand what it is independently to master a subject, to grasp it in all its ramifications, and retain it in his memory as a whole." This criticism, be it noted, applies more particularly to our

students of the humanities. In the pursuit of natural science and in the special discipline of the law our Rhodes scholars have made a better showing. But in general, their cultural, especially linguistic, limitations, are a raising of the eyebrow for don and student of English training.

IDOLS OF THE TRIBE

Roger Bacon, long ago, and after him, Francis, in their quest of truth, perceived that there were four grounds of human error. Of these the first is "the false appearances that are imposed upon us by the general nature of the mind" of man. The mind is always prone to accept the affirmative or active as proof rather than the negative so that if you hit the mark a few times you forget the many that you missed it. You worship Neptune for the numerous pictures in his temple of those that escaped shipwreck, but you omit to ask: "Where are the pictures of those that were drowned?" And because you are mentally equipped to seek uniformity, you ascribe to "Nature a greater equality and uniformity than is, in truth." In this refractory mind of man "the beams of things" do not "reflect according to their true incidence"; hence our fundamental superstitions, fallacies which Francis Bacon calls the Idols, or delusions, of the Race, or Tribe.

In matters of education the dearest delusion of our Tribe to-day is *that the university should reflect the public*. This is the idol of the Popular Voice. Once the university is joined to this idol, it is joined to all the idols of that Pantheon. It accepts the fallacy that our sons and daughters are equally gifted and zealous, and hence that each must profit by the higher education. This is the idol of Inevitable Grace; that is, of grace innate and

irresistible by which every youth is predestinated to intellectual life "without any foresight of faith or good works, or perseverance in either of them, or any other thing in the creature, as conditions or causes moving him thereunto," or anything in the tutor. No Calvinistic favor this, by which some are chosen while others are ordained to ignorance and sloth, but a favor not contemplated in the Westminster Confession, by which all are elect and all, in due season, effectually called to learning, and quickened and renewed by the Spirit of Zeal, and so enabled to answer this call and embrace the Grace offered and conveyed in it. The university is then joined to the idol of Numbers. And of these worships the shibboleth is "mediocrity"; for to raise the standard of university requirement is to discriminate between candidates, and to doubt Inevitable Grace, while to decrease the bloated registration is a sacrilege which Numbers will avenge with curtailment of prosperity. And the ritual march is by lock-step, for tests, competition, and awards are alien to the American spirit thus misrepresented—save athletic competition; that is a divine exception.

The university is next joined to the idol of Quick Returns. It accepts the fallacy of utilitarian purpose; and hence that a profession must be chosen prematurely and immaturely entered; and hence that studies are not for discipline or intrinsic worth, but from the primary school to the Ph.D., for purely vocational value; and hence that every incipient vocation from making toy boats and paper mats to making tariffs and balloons must find its place in every school and in every grade for every man or woman child. And since the man or woman child may find perchance a vocation in the liberal arts, the child must bestride both horses, though with the usual aerial result.

And our students—they worship the idol of Incidental Issues: the fallacy that the aim of the university is deliberately to make character. As if character were worth anything without mind, and were any other, as President Wilson has wisely said, than the by-product of duty performed; or that the duty of the student were any other than to study. They accept the fallacy that the gauge of studentship is popularity, and that popularity during academic years is to be won by hasty achievement and the babbling strenuous life, by allegiance to a perverted image of the Alma Mater, by gregariousness, by playing at citizenship. Of this popularity the outward and visible index is mundane prominence and the lightly proffered laurel of the campus.

I said that the dearest delusion of the Tribe was that the university should reflect the public. But this delusion requires also that our universities be continually figuring in the public eye. So far as such activity is necessary to the building up of schools and to the education of a community to an understanding of the ideals and the needs of higher education, it is not only legitimate but laudable. But when, under the name of university extension, our universities undertake the higher education of the periphery, in dilettantism or methods of research, they run the risk of university attenuation and simulation. When, not dispassionately, they figure in public issues, they lay themselves open to the charge of partizanship. Time was when academic etiquette forbade the university professor to participate in political contests. Now there are who dare to inject the university into prejudiced affairs, even into criminal cases pending in the courts. They have joined themselves to the idol of Parade.

To this same false policy of figuring in the public eye

our universities bow when they sanction amphitheatrical spectacles, at some of which money enough passes hands to build a battleship. Football is a most desirable recreation, and a moral and physical discipline of value to every able-bodied boy. Nay, more, athletics, physical sport, and emulation are necessary to spiritual health. Even excess in them is better, it has often been said, than that moral evil should abound. But is the alternative necessary? Must we have either gladiators or degenerates? Need athletics be professionalized, be specialized? Do specialized athletics benefit the morals of the ninety and nine who don't play? Do they not rather spoil sport, detract from time and tendency to exercise for oneself? Do they not substitute hysteria for muscular development? Football is a noble game; but it is with disgust that one views its degeneration from an exhilarating pastime for all into a profession of the few, a source of newspaper notoriety, a cause of extravagance, orgiastic self-abandonment, and educational shipwreck. This comes of bowing to the idol of Parade.

The university should not adopt the idols of the community. It should set the ideals. The American university is, and ever must be, democratic. It offers education to all who can profit by it. But education itself is aristocratic—of the best and for the best. The educated are those who, having striven, are the chosen few.

IDOLS OF THE ACADEMIC MARKET-PLACE

Bewildered by the advance of democracy, educators not only have accepted fallacies of the Tribe, but have attempted to justify their acceptance by further fallacies of their own, based some upon a juggling with words, others upon the authority of some Pundit (living or dead),

others upon individual ignorance and conceit. These are, respectively, what Bacon has called the idols of the Market-place, the idols of the Lecture-room or Theater, the idols of the Cave.

Idols of the Market-place are fallacies proceeding from the misconception of words. Since we educators are an imitative race, many of these misconceptions have been fostered or confirmed by the influence of some great name, Rousseau, or Froebel, or Jacotot, or another, that is to say, by authority. Consequently, the idols of the Market-place are sometimes also idols of the Theater, which is to say, of the Lecture-room, or master by whose words we swear.

"He that will write well in any tongue must follow this counsel of Aristotle, to speak as the common people speak, but think as wise men think." From disregard of such counsel, many of our academic fallacies concerning education have arisen. We are involved in questions and differences because we have followed the false appearances of words, instead of setting down in the beginning the definitions in which as wise men we may concur. In what definition of education is it possible that wise men may concur? All will agree that education is a process, not that of play, nor yet of work, but of artistic activity. Play meanders pleasantly toward an external end of no significance. Work drives straight for an end beyond that is pleasant because of its worth. The process of Art has an end but not beyond. Its end is in itself; and it is pleasurable in its activity because its true activity is a result. From play the artistic process differs because its end is significant; from work it differs because its end is in its activity, and because its activity possesses the pleasure of worth. It is like religion: a process continually begun, and in its incompleteness complete. Its ideal

is incapable of temporal fulfilment, but still, in each moment of development, it is spiritually perfect.

Education, then, is an art—the art of the individual realizing himself as a member of a society whose tabernacle is here, but whose home is a house not built with hands. Education is the process of knowing the best, enjoying the best, producing the best in knowledge, conduct, and the arts. Realization, expression of self, physical, intellectual, social, emotional, is its means and end. It implies faith in a moral order and continuing process, of which it is itself an integral and active part.

It is remarkable with what persistency the race of educators has indulged extremes. There has been accorded from time to time an apostle of the golden mean. But his disciples have ever proceeded to the ulterior limit: among the ancients to the pole of self-culture or to the pole of uncultured service; in the Dark Ages to the ideal of the cloister or the ideal of the castle, to joyless learning or to feudal, and feminine, approval; in the Middle Ages to the bigotry of the obscurantist or the allurement of the material; in the Renaissance to contempt of the ancients or to neo-paganism—to theological quibbles or to Castiglione, to the bonfire of vanities or the carnal songs of Lorenzo; in the Reformation, to compulsory discipline or the apotheosis of natural freedom; in the succeeding age to pedantry or deportment. Still later appear Rousseau and the philanthropists with the "return to nature," the worship of individuality, the methods of coddling and play; and then Jacotot—and the equal fitness of all for higher education, the exaggeration of inductive methods, the chimerical equivalence of studies. And now has arrived the subordination of the art to pure profit, or vaudeville, or seminars for sucklings.

Always the fallacy of the extreme!—If education is

not for the fit it must be for imbeciles; if not for culture, for Mammon; if not for knowledge, for power; if not of incunabula, of turbines and limericks; if not by the cat-o'-nine-tails, by gum-drops. Why the mean of a Plato or a Quintilian could not obtain—the sanity of Melanchthon or Erasmus, of Sturm or Comenius, of Milton or the Port Royal, of Pestalozzi, Friedrich Wolf, or Thomas Arnold,—Heaven only knows, which in its unscrutable purpose has permitted the race of educators, following the devices of their own heart, to go astray after idols.

To know, to feel, to do aright and best, each and all in all and each of the fields of human activity, that is the art of education.

If we exaggerate one of these functions to the neglect of the rest, our education is no longer an ideal but an idol. If, forgetting that education is an art, we try to make of it a pleasant meandering, we set up the idol of Play. If, forgetting that the activity of Art is of intrinsic value and delight, we glorify the empty means and merit of drudgery, then we have erected the idol of Pedantry; we beat the air for discipline, shuffle in and out of corners the straw of arid learning, and choke ourselves with the dust of our own sweeping. If we fix our eyes on the cash, we bow to the tribal idol of Quick Returns. If we forget that, as an art, there is for education a progressive ideal and a law of progress, too, we bow to the idol of Caprice. We fall not only into the fallacies already enumerated but into the fallacy of the equivalence of studies, the fallacy of shifting, the fallacy of dissipation. In Art each factor is in relation to the rest, and all to the whole; we proceed fatuously upon the assumption that the part is the whole; and therefore each part equal to each; and therefore one study as good as any other. In Art the means, which is the end, is relative, progressive;

we assume comfortably that studies are independent of each other, that we can take any in any order, pass an examination and have done. In Art the end, which is the means, is absolute and self-referred and ideal; we figure that, by dissipating our energies, we shall happen to hit, here and now, the ideal. Disregarding the progressive unity of education we bow to Caprice.

The idols of the academic market-place to-day are Caprice and Quick Returns and Play, and, in unexpected corners, Pedantry, against which in reaction these three were set up. Of these, Quick Returns was borrowed from the tribe; and not alone, for of this subvention are other tribal gods too numerous to rehearse—specially Numbers and Inevitable Grace and Incidental Issues and Parade. To one or other of these false worships are due the wane of scholarship, the utilitarian tendency, the excrescence of non-academic activities, the neglected discipline in our education at the present time.

THE COLLAPSE OF CULTURE

A generation ago the scientists warred for recognition as educators of youth. They deserved to win; and they won. To know the law of the natural world is indispensable to him who would understand aright the law of the social. A fundamental and sympathetic acquaintance with at least one science, such as physics or chemistry, is as integral a part of culture as a fundamental and sympathetic acquaintance with the humanities. The conflict is no longer between science and culture; for science is a face of culture. The war now is between the ideal of culture and the idol of Quick Returns.

In preparation for the technical professions and for medicine the culture of science is of course nowadays not

neglected, but the culture of the humanities too frequently is. In preparation for law, for theology, for teaching, for certain branches of humanistic research, the culture of science is frequently omitted, the culture of the classical humanities slighted. In either case the education which should precede vocation is lacking; and the pursuit of the vocation becomes arid and material. The training of imagination, emotion, induction, to be derived from a study of our historical and literary heritage, is especially necessary to the professions and to the nation; and especially, today, is it cast to the winds. The riches and uplift of the humanities are bartered for a mess of pottage.

Education is to enjoy the best and produce the best as well as to know the best. How can one enjoy without knowing; how can one produce in the freedom of self-realization, without enjoying? What was it Fletcher of Saltoun said?—The songs of a nation, the poetry of a nation, the music of a nation, the art of a nation, the history of a nation, the ideals of a nation, aye, and of a world—these are the joy of life, these the impulse to law and conduct, and discovery and creation, and patriotism and religion. Without the humanities what man can be educated? what vocation is more than a meal-check? What is a man profited if he shall gain the whole world and lose his own soul? What were a world without Romance?

"Since spoken word man's spirit stirred
Beyond his belly-need,
What is is Thine of fair design
In thought and craft and deed.
Each stroke aright of toil and fight,
That was and that shall be,
And hope too high, wherefore we die,
Has birth and worth in Thee."

Especially downtrodden of men is our heritage from antiquity. Man will always be the heir of all the ages. To satisfy him with the heritage of a recent yesterday, the modern languages and literatures, modern history and poetry and economics strive in vain. He remains the child of the ages, but a child deprived of his full heritage —deprived, by a constructive inhibition in our schools, of the imaginative, moral, and historical training of the Bible, and of the inestimable riches of its literature—deprived by delusions of Quick Returns and Blind Caprice of ancient history, poetry, philosophy, the background of all that is new—deprived of the classics. Upon a first hand acquaintance with Greek and Latin classics the appreciation of English and of all modern literature depends. The knowledge of the history of institutions and of art depends upon a knowledge of the classics. The knowledge of philosophy depends upon a knowledge of the classics. Equipment for liberal scholarship of any kind depends upon a knowledge of the classics. No better training in logical processes was ever devised than the philological discipline of the classics. No discipline more thoroughly systematized, more uniform, more definite, more rigorous. No better training in the use of one's own language than translation from the classics. No better school of poetry or of oratory than the classics. No better gallery of lives—which to contemplate is to know that virtue is its own reward and vice its own penalty.

To the abandonment of the classics with their sweet simplicity and their majesty, their orderly restraint and their severe regard, I attribute in no small degree the declining ability to think clearly, to speak and write lucidly, precisely, effectively, the declining love of noble letters and noble art; the declining respect for tradition

and authority, for the heritage and the faith; the declining splendor of the ideal. Shall Man, who is the heir of the society of all the ages, experience no quiver of historic sense, have no glimmer of that liberal art and life which led his rude forefathers to the enlightenment of civilization?

Twenty-nine years ago, the Right Reverend Samuel Smith Harris, Bishop of Michigan, pleading from the platform of a great university for the rights and privileges of complete education, said: "The allurements of mammon and worldliness are too often permitted to call our ingenuous youth from the proper business of the school and college. Short roads and by-paths are opened up to tempt them to abandon the proper work of education and to go prematurely to schools of professional and technical instruction. The consequence is the sending forth of half-educated men and inexperienced men to plead the causes, and heal the diseases, and lead the thinking of the generation. Let us all protest against this great evil; for unless it is counteracted it will lead to the impoverishment of the age." It has led to the impoverishment of the age.

The neglect of the humanities is traceable, also, to the pedagogical doctrine of the equivalence of studies, a tenet of Caprice. But there is, in fact, no such thing as equivalence of studies in discipline, or in informational value, for life. The humanities and the sciences train faculties the same, or different, in different conjunctions and in different degrees. They, severally, impart information that has different values for life, or that is appropriate to different callings in life.

If, in obedience to the new psychology, we surrender the theory of the superior discipline of certain studies, we still hold to the superior educational worth of certain

studies because of their intrinsic value for life. In other words, granting that as one of our eminent new psychologists has said, "Conscientious pursuit of any intellectual occupation results in rendering the mind more efficient in all other lines of work," there is still a greater "residual value in the character of the subject-matter" of certain studies than of others.

But even in the matter of discipline it is essential that the mental machine be trained to run not in one rut but in the several grooves "of procedure needful in the main divisions of the world of mind." And of these procedures that which demands mental concentration in the highest degree develops best the ability to grapple mentally and morally with the manifold problems of life. That which is capable, because of long centuries of educational experience, of conveying a discipline most nearly uniform is most to be desired in the training of the youth of a democratic republic. From this point of view we do not surrender the theory of the superiority of the discipline for life as a whole afforded by the humanities. The dictum of one whose words have found ready acceptance these past thirty years that "the object of a liberal and scientific education is fundamentally the same, namely, training for power" is one of the most vicious fallacies that ever afflicted education. Power is not the only object; nor is the power the same; nor is the training the same; nor are those other objects, knowledge and cultivated judgment, the same.

One does not, of course, base an advocacy of the compulsory study of the humanities on the sole ground of formal discipline, or of their initial distastefulness to many—though to preserve and to conquer are essential factors in education; but one does most emphatically decline to eliminate from the curriculum knowledge and

power for life which the humanities, properly taught, convey, in favor of vocational preparation, which is a kind of child-labor in disguise, or of education by capricious choice. All that has been said of the compulsory study of the humanities applies *mutatis mutandis* to the compulsory study of science. To culture both are essential.

OBITER DICTA

Let us, with a higher grade of freshmen entering our universities, and with systems of study to offer them, insist that scholarship be supreme. Let us encourage intellectual emulation by the methods that I have suggested: by eliminating the "snap" and its professor, by modifying the merit of "heaped-up" courses, by molding the student but, still, throwing him more upon his unaided effort; by emphasizing scope, impartiality and rigor of examination; and by enforcing publicity of award and of awarded responsibilities. So doing, we shall offset the culture of Incidental Issues, Parade, and Play. We shall explode the folly of athletics at long range; abate the hysteria of the *ludi maximi.* As to the extravagance incident upon gladiatorial combats—let us, at once, eliminate all that savors of professionalism and the Flavian Amphitheater. Let us, at once, revise the rules of the game that necessitate pugilistic proficiency, and hence protracted periods of professional inurement, and hence salaried coaches and trainers and such like *lanistæ,* masseurs and scrapers and oilers, and training tables and special gratuities of food and raiment, and hence colossal expenditures, and colossal risks, and corvées and benevolences, and colossal gate-receipts. Let us abolish the nightmare of frantic excess and carnal hostility, and strife and blood and dust.

Let us make of football not a menace to morals and manners, life and limb, but a generous rivalry, a pastime in which all may engage, a clean and wholesome sport. In brief, let us cultivate athletics for education; not for the "thug" or the "bookie" or the "bum."

A serious obstacle to education is the ever-increasing mass of the university. The more we subdivide the better. But the more spontaneous the cleavage—the more characteristic the constituent groups, the more cohesive each, and the more manageable. In our Greek-letter fraternities, and in similar house-clubs, we have even now a germ of marvelous academic potentiality. Our fraternities are American in origin and in spirit. Their process is of natural selection. Their membership includes instructors as well as students. In the fraternity is one solution of the difficulty of numbers. Let us persuade our fraternities to revise the policy of choosing members, once in a while, for promise of scholarship. And let us found within our fraternities and house-clubs graduate fellowships with residence in the house. Such fellowships will not only elevate the standard of the sodalities themselves, but constitute the initial step toward the realization of a system of colleges of resident students and instructors, mutually stimulating, within the university.

Of the common sense of our students, of their desire to benefit by the opportunities offered them, I have no doubt. The essential of reform is that we, of the faculties, do our duty. In one of Frank Norris's novels there is a sailing master who fears that his captain, having failed to reach the Pole, will take to writing books and lecturing. "I wouldn't be so main sorry," says the broken-hearted tar to the heroine, "I wouldn't be so main sorry that he won't reach the Pole, as that he quit trying. . . . The danger don't figure; what he'd have to go

through with don't figure; nothing in the world don't figure; it's his work; God A'mighty cut him out for that, and he's got to do it. Ain't you got any influence with him, Miss? Won't you talk good talk to him? Don't let him chuck; don't let him get soft. Make him be a Man and not a professor."

Let us be Men. Let us keep undesirables out of the university. Let us eliminate the obsolete features, and combine the best, of the admission by examination and the admission by accrediting. Let us say to the Bandar-log, "You may swing by your tail if you will, when you're not in the Palace; but if you don't come down now and find out what the Palace is for, and do it, you shall go back to the jungle and swing by your tail forever." Let us cultivate closer personal relations with our young men that they may be neither futile nor utilitarian, neither Bandar-logs nor Men of Argos, that their youth may not be "a blunder, their manhood a vain struggle, their old age a regret." Let us be none the less learned, but let us not be merely specialists. Let us be Men. Let us pay less attention to mechanism, and more to teaching, inspiring, humanizing. Let us make the college the gateway, not of loafing and vain delights and dissipated energies and immaterial triumphs, not of mistaken ideals, utilitarian or professional, profitless learning or vacuous method, but of the glorious world of conduct and opportunity, of life. Our remedies lie in ourselves. And even though this generation of students and of teachers may have failed of the ideal, we shall know that, for the next, some idols have been swept away.

THE AIM OF A LIBERAL COLLEGE[1]

ALEXANDER MEIKLEJOHN

No college president in recent years, with the exception of Woodrow Wilson, has received more front page newspaper attention than Alexander Meiklejohn during the latter part of his presidency of Amherst College, which office he held from 1912 until he retired in 1923. His vigorous utterances upon academic questions have gained him many followers. Though born at Rochdale, England, in 1872, he has lived in America since early childhood. He was graduated from Brown University in 1893 with the degree of A.B. and received his Master's degree from the same institution in 1895. During the next two years he studied in the Sage School of Philosophy of Cornell University, and from that institution he received his degree of Ph.D. From 1897 to 1912 he served upon the faculty of philosophy of Brown University. The address given here was the inaugural delivered upon assuming the office of president of Amherst College. Alexander Meiklejohn has been a devoted exponent of intellectual independence and of academic freedom and obligation. His ideas upon these subjects are well expressed in his *Freedom and the College* (1923).

IN the discussions concerning college education there is one voice which is all too seldom raised and all too often disregarded. It is the voice of the teacher and the scholar, of the member of the college faculty. It is my purpose to devote this address to a consideration of the ideals of the teacher, of the problems of instruction as they present themselves to the men who are giving the instruction. And I do this not because I believe that just now the teachers are wiser than others who are dealing with the same questions, but rather as an expression of a definite conviction with regard to the place of the teacher

[1] An address given at the time of the inauguration of Alexander Meiklejohn as president of Amherst College. Reprinted through the courtesy of the author.

in our educational scheme. It is, I believe, the function of the teacher to stand before his pupils and before the community at large as the intellectual leader of his time. If he is not able to take this leadership, he is not worthy of his calling. If the leadership is taken from him and given to others, then the very foundations of the scheme of instruction are shaken. He who in matters of teaching must be led by others is not the one to lead the imitative undergraduate, not the one to inspire the confidence and loyalty and discipleship on which all true teaching depends. If there are others who can do these things better than the college teacher of today, then we must bring them within the college walls. But if the teacher is to be deemed worthy of his task, then he must be recognized as the teacher of us all, and we must listen to his words as he speaks of the matters intrusted to his charge.

In the consideration of the educational creed of the teacher I will try to give, first, a brief statement of his belief; second, a defense of it against other views of the function of the college; third, an interpretation of its meaning and significance; fourth, a criticism of what seem to me misunderstandings of their own meaning prevalent among the teachers of our day; and, finally, a suggestion of certain changes in policy which must follow if the belief of the teacher is clearly understood and applied in our educational procedure.

I

First, then, What do our teachers believe to be the aim of college instruction? Wherever their opinions and convictions find expression there is one contention which is always in the foreground, namely, that to be liberal a college must be essentially intellectual. It is a place, the

teachers tell us, in which a boy, forgettings all things else, may set forth on the enterprise of learning. It is a time when a young man may come to awareness of the thinking of his people, may perceive what knowledge is and has been and is to be. Whatever light-hearted undergraduates may say, whatever the opinions of solicitous parents, of ambitious friends, of employers in search of workmen, of leaders in church or state or business—whatever may be the beliefs and desires and demands of outsiders—the teacher within the college, knowing his mission as no one else can know it, proclaims that mission to be the leading of his pupil into the life intellectual. The college is primarily not a place of the body, nor of the feelings, nor even of the will; it is, first of all, a place of the mind.

II

Against this intellectual interpretation of the college our teachers find two sets of hostile forces constantly at work. Outside the walls there are the practical demands of a busy commercial and social scheme; within the college there are the trivial and sentimental and irrational misunderstandings of its own friends. Upon each of these our college teachers are wont to descend as Samson upon the Philistines, and when they have had their will, there is little left for another to accomplish.

As against the immediate practical demands from without, the issue is clear and decisive. College teachers know that the world must have trained workmen, skilled operatives, clever buyers and sellers, efficient directors, resourceful manufacturers, able lawyers, ministers, physicians, and teachers. But it is equally true that, in order to do its own work, the liberal college must leave the

special and technical training for these trades and professions to be done in other schools and by other methods. In a word, the liberal college does not pretend to give all the kinds of teaching which a young man of college age may profitably receive; it does not even claim to give all the kinds of intellectual training which are worth giving. It is committed to intellectual training of the liberal type, whatever that may mean, and to that mission it must be faithful. One may safely say, then, on behalf of our college teachers, that their instruction is intended to be radically different from that given in the technical school or even in the professional school. Both these institutions are practical in a sense which the college, as an intellectual institution, is not. In the technical school the pupil is taught how to do some one of the mechanical operations which contribute to human welfare. He is trained to print, to weave, to farm, to build; and for the most part he is trained to do these things by practise rather than by theory. His possession when he leaves the school is not a stock of ideas, of scientific principles, but a measure of skill, a collection of rules of thumb. His primary function as a tradesman is not to understand but to do, and in doing what is needed he is following directions which have first been thought out by others and are now practised by him. The technical school intends to furnish training which, in the sense in which we use the term, is not intellectual but practical.

In a corresponding way the work of the professional school differs from that of the liberal college. In the teaching of engineering, medicine, or law we are or may be beyond the realm of mere skill and within the realm of ideas and principles. But the selection and the relating of these ideas is dominated by an immediate practical interest which cuts them off from the intellec-

tual point of view of the scholar. If an undergraduate should take away from his studies of chemistry, biology, and psychology only those parts which have immediate practical application in the field of medicine, the college teachers would feel that they had failed to give to the boy the kind of instruction demanded of a college. It is not their purpose to furnish applied knowledge in this sense. They are not willing to cut up their sciences into segments and to allow the student to select those segments which may be of service in the practise of an art or a profession. In one way or another the teacher feels a kinship with the scientist and the scholar which forbids him to submit to this domination of his instruction by the demands of an immediate practical interest. Whatever it may mean, he intends to hold the intellectual point of view and to keep his students with him if he can. In response, then, to demands for technical and professional training our college teachers tell us that such training may be obtained in other schools; it is not to be had in a college of liberal culture.

In the conflict with the forces within the college our teachers find themselves fighting essentially the same battle as against the foes without. In a hundred different ways the friends of the college—students, graduates, trustees, and even colleagues—seem to them so to misunderstand its mission as to minimize or to falsify its intellectual ideals. The college is a good place for making friends; it gives excellent experience in getting on with men; it has exceptional advantages as an athletic club; it is a relatively safe place for a boy when he first leaves home; on the whole, it may improve a student's manners; it gives acquaintance with lofty ideals of character, preaches the doctrine of social service, exalts the virtues and duties of citizenship. All these conceptions

seem to the teacher to hide or to obscure the fact that the college is fundamentally a place of the mind, a time for thinking, an opportunity for knowing. And perhaps in proportion to their own loftiness of purpose and motive they are the more dangerous as tending all the more powerfully to replace or to nullify the underlying principle upon which they all depend. Here again, when misconception clears away, one can have no doubt that the battle of the teacher is a righteous one. It is well that a boy should have four good years of athletic sport, playing his own games and watching the games of his fellows; it is well that his manners should be improved; it is worth while to make good friends; it is very desirable to develop the power of understanding and working with other men; it is surely good to grow in strength and purity of character, in devotion to the interests of society, in readiness to meet the obligations and opportunities of citizenship. If any one of these be lacking from the fruits of a college course we may well complain of the harvest. And yet is it not true that by sheer pressure of these, by the driving and pulling of the social forces within and without the college, the mind of the student is constantly torn from its chief concern? Do not our social and practical interests distract our boys from the intellectual achievements which should dominate their imagination and command their zeal? I believe that one may take it as the deliberate judgment of the teachers of our colleges today that the function of the college is constantly misunderstood, and that it is subjected to demands which, however friendly in intent, are yet destructive of its intellectual efficiency and success.

III

But now that the contention of the teacher has been stated and reaffirmed against objections, it is time to ask: What does it mean? And how can it be justified? By what might does a company of scholars invite young men to spend with them four years of discipleship? Do they, in their insistence upon the intellectual quality of their ideal, intend to give an education which is avowedly unpractical? If so, how shall they justify their invitation, which may perhaps divert young men from other interests and other companionships which are valuable to themselves and to their fellows? In a word, what is the underlying motive of the teacher, what is there in the intellectual interests and activities which seems to him to warrant their domination over the training and instruction of young men during the college years?

It is no fair answer to this question to summon us to faith in intellectual ideals, to demand of us that we live the life of the mind with confidence in the virtues of intelligence, that we love knowledge and because of our passion follow after it. Most of us are already eager to accept intellectual ideals, but our very devotion to them forbids that we accept them blindly. I have often been struck by the inner contradictoriness of the demand that we have faith in intelligence. It seems to mean, as it is so commonly made to mean, that we must unintelligently follow intelligence, that we must ignorantly pursue knowledge, that we must question everything except the business of asking questions, that we think about everything except the use of thinking itself. As Mr. F. H. Bradley would say, the dictum "Have faith in intelligence" is so true that it constantly threatens to become false. Our

very conviction of its truth compels us to scrutinize and test it to the end.

How, then, shall we justify the faith of the teacher? What reason can we give for our exaltation of intellectual training and activity? To this question two answers are possible. First, knowledge and thinking are good in themselves. Secondly, they help us in the attainment of other values in life which without them would be impossible. Both these answers may be given and are given by college teachers. Within them must be found whatever can be said by way of explanation and justification of the work of the liberal college.

The first answer receives just now far less of recognition than it can rightly claim. When the man of the world is told that a boy is to be trained in thinking just because of the joys and satisfactions of thinking itself, just in order that he may go on thinking as long as he lives, the man of the world has been heard to scoff and to ridicule the idle dreaming of scholarly men. But if thinking is not a good thing in itself, if intellectual activity is not worth while for its own sake, will the man of the world tell us what is? There are those among us who find so much satisfaction in the countless trivial and vulgar amusements of a crude people that they have no time for the joys of the mind. There are those who are so closely shut up within a little round of petty pleasures that they have never dreamed of the fun of reading and conversing and investigating and reflecting. And of these one can only say that the difference is one of taste, and that their tastes seem to be relatively dull and stupid. Surely it is one function of the liberal college to save boys from that stupidity, to give them an appetite for the pleasures of thinking, to make them sensitive to the

joys of appreciation and understanding, to show them how sweet and captivating and wholesome are the games of the mind. At the time when the play element is still dominant it is worth while to acquaint boys with the sport of facing and solving problems. Apart from some of the experiences of friendship and sympathy, I doubt if there are any human interests so permanently satisfying, so fine and splendid in themselves, as are those of intellectual activity. To give our boys that zest, that delight in things intellectual, to give them an appreciation of a kind of life which is well worth living, to make them men of intellectual culture—that certainly is one part of the work of any liberal college.

On the other hand, the creation of culture as so defined can never constitute the full achievement of the college. It is essential to awaken the impulses of inquiry, of experiment, of investigation, of reflection, the instinctive cravings of the mind. But no liberal college can be content with this. The impulse to thinking must be questioned and rationalized as must every other instinctive response. It is well to think, but what shall we think about? Are there any lines of investigation and reflection more valuable than others, and, if so, how is their value to be tested? Or again, if the impulse for thinking comes into conflict with other desires and cravings, how is the opposition to be solved? It has sometimes been suggested that our man of intellectual culture may be found, like Nero, fiddling with words while all the world about him is aflame. And the point of the suggestion is not that fiddling is a bad and worthless pastime, but rather that it is inopportune on such an occasion, that the man who does it is out of touch with his situation, that his fiddling does not fit his facts. In a word, men know with regard to thinking, as with regard to every

other content of human experience, that it cannot be valued merely in terms of itself. It must be measured in terms of its relation to other contents and to human experience as a whole. Thinking is good in itself,—but what does it cost of other things; what does it bring of other values? Place it amid all the varied contents of our individual and social experience, measure it in terms of what it implies, fix it by means of its relations, and then you will know its worth not simply in itself but in that deeper sense which comes when human desires are rationalized and human lives are known in their entirety, as well as they can be known by those who are engaged in living them.

In this consideration we find the second answer of the teacher to the demand for justification of the work of the college. Knowledge is good, he tells us, not only in itself, but in its enrichment and enhancement of the other values of our experience. In the deepest and fullest sense of the words, knowledge pays. This statement rests upon the classification of human actions into two groups, those of the instinctive type and those of the intellectual type. By far the greater part of our human acts are carried on without any clear idea of what we are going to do or how we are going to do it. For the most part our responses to our situations are the immediate responses of feeling, of perception, of custom, of tradition. But slowly and painfully, as the mind has developed, action after action has been translated from the feeling to the ideational type; in wider and wider fields men have become aware of their own modes of action, more and more they have come to understanding, to knowledge of themselves and of their needs. And the principle underlying all our educational procedure is that, on the whole, actions become more successful as

they pass from the sphere of feeling to that of understanding. Our educational belief is that in the long run, if men know what they are going to do and how they are going to do it and what is the nature of the situation with which they are dealing, their response to that situation will be better adjusted and more beneficial than are the responses of the feeling type in like situations.

It is all too obvious that there are limits to the validity of this principle. If men are to investigate, to consider, to decide, then action must be delayed, and we must pay the penalty of waiting. If men are to endeavor to understand and know their situations, then we must be prepared to see them make mistakes in their thinking, lose their certainty of touch, wander off into pitfalls and illusions and fallacies of thought, and, in consequence, secure for the time results far lower in value than those of the instinctive response which they seek to replace. The delays and mistakes and uncertainties of our thinking are a heavy price to pay, but it is the conviction of the teacher that the price is as nothing when compared with the goods which it buys. You may point out to him the loss when old methods of procedure give way before the criticism of understanding, you may remind him of the pain and suffering when old habits of thought and action are replaced, you may reprove him for all the blunders of the past; but in spite of it all he knows, and you know, that in human lives taken separately and in human life as a whole men's greatest lack is the lack of understanding, their greatest hope to know themselves and the world in which they live.

Within the limits of this general educational principle the place of the liberal college may easily be fixed. In the technical school pupils are prepared for a specific work and are kept for the most part on the plane of per-

ceptual action, doing work which others understand. In the professional school, students are properly within the realm of ideas and principles, but they are still limited to a specific human interest with which alone their understanding is concerned. But the college is called liberal as against both of these because the instruction is dominated by no special interest, is limited to no single human task, but is intended to take human activity as a whole, to understand human endeavors not in their isolation, but in their relations to one another and to the total experience which we call the life of our people. And just as we believe that the building of ships has become more successful as men have come to a knowledge of the principles involved in their construction; just as the practise of medicine has become more successful as we have come to a knowledge of the human body, of the conditions within it and the influences without;—just so the teacher in the liberal college believes that life as a total enterprise, life as it presents itself to each one of us in his career as an individual,—human living,—will be more successful in so far as men come to understand it and to know it as they attempt to carry it on. To give boys an intellectual grasp on human experience—this it seems to me is the teacher's conception of the chief function of the liberal college.

May I call attention to the fact that this second answer of the teacher defines the aim of the college as avowedly and frankly practical? Knowledge is to be sought chiefly for the sake of its contribution to the other activities of human living. But, on the other hand, it is as definitely declared that in method the college is fully and unreservedly intellectual. If we can see that these two demands are not in conflict, but that they stand together in the harmonious relation of means and ends, of instru-

ment and achievement, of method and result, we may escape many a needless conflict and keep our educational policy in singleness of aim and action. To do this we must show that the college is intellectual, not as opposed to practical interests and purposes, but as opposed to unpractical and unwise methods of work. The issue is not between practical and intellectual aims but between the immediate and the remote aim, between the hasty and the measured procedure, between the demand for results at once and the willingness to wait for the best results. The intellectual road to success is longer and more roundabout than any other, but they who are strong and willing for the climbing are brought to higher levels of achievement than they could possibly have attained had they gone straight forward in the pathway of quick returns. If this were not true the liberal college would have no proper place in our life at all. In so far as it is true the college has a right to claim the best of our young men to give them its preparation for the living they are to do.

IV

But now that we have attempted to interpret the intellectual mission of the college, it may be fair to ask: "Are the teachers and scholars of our day always faithful to that mission? Do their statements and their practice always ring in accord with the principle which has been stated?" It seems to me that at two points they are constantly off the key, constantly at variance with the reasons by which alone their teaching can be justified.

In the first place, it often appears as if our teachers and scholars were deliberately in league to mystify and befog the popular mind regarding this practical value of

intellectual work. They seem not to wish too much said about the results and benefits. Their desire is to keep aloft the intellectual banner, to proclaim the intellectual gospel, to demand of student and public alike adherence to the faith. And in general when they are questioned as to results they give little satisfaction except to those who are already pledged to unwavering confidence in their *ipse dixits*. And largely as a result of this attitude the American people seem to me to have little understanding of the intellectual work of the college. Our citizens and patrons can see the value of games and physical exercises; they readily perceive the importance of the social give and take of a college democracy; they can appreciate the value of studies which prepare a young man for his profession and so anticipate or replace the professional school; they can even believe that if a boy is kept at some sort of thinking for four years his mind may become more acute, more systematic, more accurate, and hence more useful than it was before. But as for the content of a college course, as for the value of knowledge, what a boy gains by knowing Greek or economics, philosophy or literature, history or biology, except as they are regarded as having professional usefulness, I think our friends are in the dark and are likely to remain so until we turn on the light. When our teachers say, as they sometimes do say, that the effect of knowledge upon the character and life of the student must always be for the college an accident, a circumstance which has no essential connection with its real aim or function, then it seems to me that our educational policy is wholly out of joint. If there be no essential connection between instruction and life, then there is no reason for giving instruction except in so far as it is pleasant in itself, and we have no educational policy at all. As against this

hesitancy, this absence of a conviction, we men of the college should declare in clear and unmistakable terms our creed—the creed that knowledge is justified by its results. We should say to our people so plainly that they cannot misunderstand: "Give us your boys, give us the means we need, and we will so train and inform the minds of those boys that their own lives and the lives of the men about them shall be more successful than they could be without our training. Give us our chance and we will show your boys what human living is, for we are convinced that they can live better in knowledge than they can in ignorance."

There is a second wandering from the faith which is so common among investigators that it may fairly be called the "fallacy of the scholar." It is the belief that all knowledge is so good that all parts of knowledge are equally good. Ask many of our scholars and teachers what subjects a boy should study in order that he may gain insight for human living, and they will say: "It makes no difference in what department of knowledge he studies; let him go into Sanscrit or bacteriology, into mathematics or history; if only he goes where men are actually dealing with intellectual problems, and if only he learns how to deal with problems himself, the aim of education is achieved, he has entered into intellectual activity." This point of view, running through all the varieties of the elective system, seems to me hopelessly at variance with any sound educational doctrine. It represents the scholar of the day at his worst both as a thinker and as a teacher. In so far as it dominates a group of college teachers it seems to me to render them unfit to determine and to administer a college curriculum. It is an announcement that they have no guiding principles in their educational practice, no principles of selec-

tion in their arrangement of studies, no genuine grasp on the relationship between knowledge and life. It is the concerted statement of a group of men each of whom is lost within the limits of his own special studies, and who as a group seem not to realize the organic relationships between them nor the common task which should bind them together.

In bringing this second criticism against our scholars I am not urging that the principle of election of college studies should be entirely discontinued. But I should like to inquire by what right and within what limits it is justified. The most familiar argument in its favor is that if a student is allowed to choose along the lines of his own intellectual or professional interest he will have enthusiasm, the eagerness which comes with the following of one's own bent. Now just so far as this result is achieved, just so far as the quality of scholarship is improved, the procedure is good, and we may follow it if we do not thereby lose other results more valuable than our gain. But if the special interest comes into conflict with more fundamental ones, if what the student prefers is opposed to what he ought to prefer, then we of the college cannot leave the choice with him. We must say to him frankly: "If you do not care for liberal training you had better go elsewhere; we have a special and definite task assigned us which demands that we keep free from the domination of special or professional pursuits. So long as we are faithful to that task we cannot give you what you ask."

In my opinion, however, the fundamental motive of the elective system is not the one which has been mentioned. In the last resort our teachers allow students to choose their own studies, not in order to appeal to intellectual or to professional interest, but because they them-

selves have no choice of their own in which they believe with sufficient intensity to impose it upon their pupils. And this lack of a dominating educational policy is in turn an expression of an intellectual attitude, a point of view, which marks the scholars of our time. In a word, it seems to me that our willingness to allow students to wander about in the college curriculum is one of the most characteristic expressions of a certain intellectual agnosticism, a kind of intellectual bankruptcy, into which, in spite of all our wealth of information, the spirit of the time has fallen. Let me explain my meaning.

The old classical curriculum was founded by men who had a theory of the world and of human life. They had taken all the available content of human knowledge and had wrought it together into a coherent whole. What they knew was, as judged by our standards, very little in amount. But upon that little content they had expended all the infinite pains of understanding and interpretation. They had taken the separate judgments of science, philosophy, history, and the arts, and had so welded them together, so established their relationships with one another, so freed them from contradictions and ambiguities that, so far as might be in their day and generation, human life as a whole and the world about us were known, were understood, were rationalized. They had a knowledge of human experience by which they could live and which they could teach to others engaged in the activities of living.

But with the invention of methods of scientific investigation and discovery there came pouring into the mind of Europe great masses of intellectual material: astronomy, physics, chemistry. This content for a time it could not understand, could not relate to what it already knew. The old boundary lines did not enclose the new fields;

the old explanations and interpretations would not fit the new facts. Knowledge had not grown; it had simply been enlarged; and the two masses of content, the old and the new, stood facing each other with no common ground of understanding. Here was the intellectual task of the great leaders of the early modern thought of Europe: to reëstablish the unity of knowledge, to discover the relationships between these apparently hostile bodies of judgments, to know the world again, but with all the added richness of the new insights and the new information. This was the work of Leibnitz and Spinoza, of Kant and Hegel, and those who labored with them. And in a very considerable measure the task had been accomplished, order had been restored. But again with the inrush of the newer discoveries, first in the field of biology and then later in the world of human relationships, the difficulties have returned, multiplied a thousandfold. Every day sees a new field of facts opened up, a new method of investigation invented, a new department of knowledge established. And in the rush of it all these new sciences come merely as additions, not to be understood but simply numbered, not to be interpreted but simply listed in the great collection of separate fields of knowledge. If you will examine the work of any scientist within one of these fields, you will find him ordering, systematizing, reducing to principles—in a word, knowing every fact in terms of its relation to every other fact and to the whole field within which it falls. But at the same time these separate sciences, these separate groups of judgment, are left standing side by side with no intelligible connections, no establishment of relationships, no interpretation in the sense in which we insist upon it with each of the fields taken by itself. Is it not the characteristic statement of

a scholar of our time to say: "I do not know what may be the ultimate significance of these facts and these principles; all that I know is that if you will follow my methods within my field you will find the facts coming into order, the principles coming into simple and coherent arrangement. With any problems apart from this order and this arrangement I have intellectually no concern"?

It has become an axiom with us that the genuine student labors within his own field. And if the student ventures forth to examine the relations of his field to the surrounding country he very easily becomes a popularizer, a littérateur, a speculator, and, worst of all, unscientific. Now I do not object to a man's minding his own intellectual business if he chooses to do so, but when a man minds his own business because he does not know any other business, because he has no knowledge whatever of the relationships which justify his business and make it worth while, then I think one may say that, though such a man minds his own affairs, he does not know them, he does not understand them. Such a man, from the point of view of the demands of a liberal education, differs in no essential respect from the tradesman who does not understand his trade or the professional man who merely practises his profession. Just as truly as they, he is shut up within a special interest; just as truly as they, he is making no intellectual attempt to understand his experience in its unity. And the pity of it is that more and more the chairs in our colleges are occupied by men who have only this special interest, this specialized information, and it is through them that we attempt to give our boys a liberal education, which the teachers themselves have not achieved.

I should not like to be misunderstood in making this railing accusation against our teachers and our time. If I say that our knowledge is at present a collection of scattered observations about the world rather than an understanding of it, fairness compels the admission that the failure is due to the inherent difficulties of the situation and to the novelty of the problems presented. If I cry out against the agnosticism of our people it is not as one who has escaped from it, nor as one who would point the way back to the older synthesis, but simply as one who believes that the time has come for a reconstruction, for a new synthesis. We have had time enough now to get some notion of our bearings, shocks enough to get over our nervousness and discomfiture when a new one comes along. It is the opportunity and the obligation of this generation to think through the content of our knowing once again, to understand it, so far as we can. And in such a battle as this, surely it is the part of the college to take the lead. Here is the mission of the college teacher as of no other member of our common life. Surely he should stand before his pupils and before all of us as a man who has achieved some understanding of this human situation of ours, but, more than that, as one who is eager for the conflict with the powers of darkness and who can lead his pupils in enthusiastic devotion to the common cause of enlightenment.

V

And now, finally, after these attacks upon the policies which other men have derived from their love of knowledge, may I suggest two matters of policy which seem to me to follow from the definition of education which

we have taken? The first concerns the content of the college course; the second has to do with the method of its presentation to the undergraduate.

We have said that the system of free election is natural for those to whom knowledge is simply a number of separate departments. It is equally true that just in so far as knowledge attains unity, just so far as the relations of the various departments are perceived, freedom of election by the student must be limited. For it at once appears that on the one side there are vast ranges of information which have virtually no significance for the purposes of a liberal education, while on the other hand there are certain elements so fundamental and vital that without any one of them a liberal education is impossible.

I should like to indicate certain parts of human knowledge which seem to me so essential that no principle of election should ever be allowed to drive them out of the course of any college student.

First, a student should become acquainted with the fundamental motives and purposes and beliefs which, clearly or unclearly recognized, underlie all human experience and bind it together. He must perceive the moral strivings, the intellectual endeavors, the esthetic experiences of his race, and closely linked with these, determining and determined by them, the beliefs about the world which have appeared in our systems of religion. To investigate this field, to bring it to such clearness of formulation as may be possible, is the task of philosophy —an essential element in any liberal education. Secondly, as in human living, our motives, purposes, and beliefs have found expression in institutions—those concerted modes of procedure by which we work together—a student should be made acquainted with these. He

should see and appreciate what is intended, what accomplished, and what left undone by such institutions as property, the courts, the family, the church, the mill. To know these as contributing and failing to contribute to human welfare is the work of our social or humanistic sciences, into which a boy must go on his way through the liberal college. Thirdly, in order to understand the motives and the institutions of human life one must know the conditions which surround it, the stage on which the game is played. To give this information is the business of astronomy, geology, physics, chemistry, biology, and the other descriptive sciences. These a boy must know, so far as they are significant and relevant to his purpose. Fourthly, as all three of these factors, the motives, the institutions, the natural processes, have sprung from the past and have come to be what they are by change upon change in the process of time, the student of human life must try to learn the sequence of events from which the present has come. The development of human thought and attitude, the development of human institutions, the development of the world and of the beings about us—all these must be known, as throwing light upon present problems, present instrumentalities, present opportunities in the life of human endeavor. And in addition to these four studies which render human experience in terms of abstract ideas, a liberal education must take account of those concrete representations of life which are given in the arts, and especially in the art of literature. It is well that a boy should be acquainted with his world not simply as expressed by the principles of knowledge, but also as depicted by the artist with all the vividness and definiteness which are possible in the portrayal of individual beings in individual relationships. These five elements, then, a young man must take from a college

of liberal training: the contributions of philosophy, of humanistic science, of natural science, of history, and of literature. So far as knowledge is concerned, these at least he should have, welded together in some kind of interpretation of his own experience and of the world in which he lives.

My second suggestion is that our college curriculum should be so arranged and our instruction so devised that its vital connection with the living of men should be obvious even to an undergraduate. A little while ago I heard one of the most prominent citizens of this country speaking of his college days, and he said: "I remember so vividly those few occasions on which the professor would put aside the books and talk like a real man about real things." Oh, the bitterness of those words to the teacher! Our books are not dealing with the real things, and for the most part we are not real men either, but just old fogies and bookworms. And to be perfectly frank about the whole matter, I believe that in large measure our pupils are indifferent to their studies simply because they do not see that these are important.

Now if we really have a vital course of study to present I believe that this difficulty can in large measure be overcome. It is possible to make a freshman realize the need of translating his experience from the forms of feeling to those of ideas. He can and he ought to be shown that now, his days of mere tutelage being over, it is time for him to face the problems of his people, to begin to think about those problems for himself, to learn what other men have learned and thought before him—in a word, to get himself ready to take his place among those who are responsible for the guidance of our common life by ideas and principles and purposes. If this could be done, I think we should get from the reality-

loving American boy something like an intellectual enthusiasm, something of the spirit that comes when he plays a game that seems to him really worth playing. But I do not believe that this result can be achieved without a radical reversal of the arrangement of the college curriculum. I should like to see every freshman at once plunged into the problems of philosophy, into the difficulties and perplexities about our institutions, into the scientific accounts of the world especially as they bear on human life, into the portrayals of human experience which are given by the masters of literature. If this were done by proper teaching, it seems to me the boy's college course would at once take on significance for him; he would understand what he is about; and though he would be a sadly puzzled boy at the end of the first year, he would still have before him three good years of study, of investigation, of reflection, and of discipleship, in which to achieve, so far as may be, the task to which he has been set. Let him once feel the problems of the present, and his historical studies will become significant; let him know what other men have discovered and thought about his problems, and he will be ready to deal with them himself. But in any case, the whole college course will be unified and dominated by a single interest, a single purpose—that of so understanding human life as to be ready and equipped for the practice of it. And this would mean for the college, not another seeking of the way of quick returns, but rather an escape from aimless wanderings in the mere bypaths of knowledge, a resolute climbing on the highroad to a unified grasp upon human experience.

I have taken so much of your time this morning that an apology seems due for the things I have omitted to mention. I have said nothing of the organization of the

college, nothing of the social life of the students, nothing of the relations with the alumni, nothing of the needs and qualifications of the teachers, and even within the consideration of the course of study, nothing of the value of specialization or of the disciplinary subjects or of the training in language and expression. And I have put these aside deliberately, for the sake of a cause which is greater than any of them—a cause which lies at the very heart of the liberal college. It is the cause of making clear to the American people the mission of the teacher, of convincing them of the value of knowledge: not the specialized knowledge which contributes to immediate practical aims, but the unified understanding which is **Insight.**

TO THE GIRL WHO WOULD CULTIVATE HERSELF[1]

Le Baron Russell Briggs

Le Baron Russell Briggs, familiarly known to countless numbers of Harvard men by the title Dean Briggs, was born in Salem, Massachusetts, in 1855, of old New England ancestry. He received the A.B. degree from Harvard in 1875, and the A.M. degree in 1882. Since 1884 he has been a member of the Harvard faculty. In addition to being a member of the Harvard faculty he served from 1903 to 1923 as president of Radcliffe College. His essays, *Routine and Ideals, College Honor, School and College,* and similar reflections were varied and sympathetic, showing how much in touch Dean Briggs has been with student life through his official duties. These essays have been valuable aids to thousands of students making their first adjustments to college life. His style is lucid and fluent. In the essay given below, the writer is not addressing himself to college men, but there is here the same clearness of expression, the same earnestness and sincerity, and the same standard of values found in all his work.

For a clever boy, no matter how poor, to rise as a man to his own level is so common, especially in America, as to excite no comment. His level may be that of the uncultivated rich, the self-made man of business, or that of the literary scholar; whatever it is, if he has energy, courage, and a fair chance, he reaches it. All this may be true of a girl; but a girl seldom gets what a boy would call, in his own case, a fair chance. In most of the learned professions she is still eyed with disfavor; in the effort to go to college she has many more sympathizers than of old, but few who feel that a college training is for her a necessity; in business, beyond stenography, typewriting, and such other subjects as are taught at commercial schools and paid for by small or moderate

[1] From *Girls and Education.* Reprinted by permission of, and by special arrangement with, the Houghton Mifflin Company.

salaries, she can rarely compete with men. There is no getting around the fact that a girl is a girl, and that as such—whatever her courage and her cleverness—she is hampered in the rough struggle for advancement, distinction, and wealth. A few women of exceptional attainments and privileges earn large salaries; but compared with those who marry people that earn large salaries their number is insignificant. Through marriage or inheritance most women win such material wealth as they possess, and with it such opportunities for culture and intellectual pleasure as well-spent wealth affords. Yet in our country an unmarried girl, with only her own efforts to support her, may lift her life above its drudgery and may become in greater or less degree a cultivated woman. I assume that she has fair health, though many girls not physically strong do what I have in mind. The principal requisites are common sense and courage.

Common sense, like humor, is a saving quality, showing its possessor what not to do, as well as what to do; and by it all ambition may fitly be tested. No girl can learn too early that there is a vast difference between feeling too big for a place and being too big for it, and that feeling too big for one's work and surroundings seldom if ever results in culture. Rather it breeds discontent, vanity, idleness, and, not infrequently, vice. Sometimes it is accompanied by a dull persistency which achieves the means without the end. No just person will deny the merit, or even the success, of the intelligent dull, or will fail to see in their success hope for himself and the race; but every just person of experience will beware of artificially lifting the unintelligent dull to a level above their own, a level at which they cannot be maintained without constant "boosting." "It is better to be a good dyer than a poor preacher," said a shrewd gentle-

man to an ambitious millhand whose quality he suspected. The ministry offers a startling illustration of the danger in tempting men by large scholarships and the hope of social respectability to a life for which their sole fitness is a kind of negative virtue. "He ought never to go into the ministry," said a distinguished clergyman of a youth helped through college by a scholarship of three hundred dollars a year because of his ministerial purpose. "Why not?" I asked. "Isn't he a good fellow?" "My dear sir," was the answer, "the church is cursed with good people." The minister's work, as every efficient minister knows, needs men that are filled with manly life, men of wisdom, of instinctive—not professional—sympathy, men of fearless leadership, men of power; and no other profession has suffered so much from the artificial infusion of weaklings. The teacher's profession suffers similarly, though less. "I do not believe," said an able graduate of a college for women, "in taking a girl out of her mother's kitchen, where she is of some use, and giving her scholarships to make her a second-rate school-teacher." Gifted Hopkins, in Dr. Holmes's *Guardian Angel,* was born to sell tape and to write verses for the local newspaper. These were decent, honorable occupations from which the effort to rescue him for higher things would have come to a humiliating end. Thus the girl who has a right to rise and who rises to some purpose is she who, not mistaking vanity for refinement, uses her woman's sensitiveness in doing, not in avoiding, her daily work; who sees in that work, however mean, something great and divine, and, by the light that never was on sea or land, is led from the common things which it glorifies into intimate communion with those who have shed the glory upon the painted canvas or the printed page. Her state of mind is as far as pos-

sible from mere unleavened restlessness. "Restlessness without a purpose," says Phillips Brooks, "is discontent; with a purpose, progress." Of the thousand men and women that we see on every holiday hanging to the electric cars or dragging themselves and their children through the crowded street, few gain rest and refreshment; most are squandering time and strength and money in the excitement of discontented motion. They, too, have achieved a means without an end, activity without progress. One of the first lessons for a girl (as for any one else) is the lesson of doing faithfully and heartily the work that is before her, of growing by doing it, not by neglecting it, of fitting herself for big tasks, so far as she is capable of them, by doing her own little tasks in a big way, not by shirking them as unworthy of her gifted and aspiring soul. "They tell me," said one of the stupidest and laziest and weakest men I have ever met, "that I should be a good deal of a man if I lived in a different kind of a place"; and with this in mind he became less than half a man where he did live. If you have dishes to wash and want to read poetry, wash the dishes first. I have known servant girls with considerable education and culture; but I do not count among these the girl whose mistress, seeing, in the middle of the morning, that the beds were not made, discovered her lying on a bed with a novel in her hand.

Granted that a girl does her work in the right spirit, she has still a good deal of time to herself. It may come in long stretches or in odd minutes; but even in odd minutes it is precious. The girl who makes the most of herself is she who first does her work generously, and next uses her odd minutes well. To use them at all requires flexibility and concentration, qualities that seldom come without urging, but qualities that insure efficiency.

To hold your attention fixed on one thing and, when that is done, to fix it instantly on another and hold it there as if the first had never been—this is what every active life demands and what few human creatures can adequately supply; yet something like this is in the power of us all, and we should work for it as we value helpfulness and happiness. The best training for it is the simple habit of industry.

For the girl who would cultivate herself, the natural resource in odd minutes is reading. By reading fifteen minutes a day, it is said, a person may become cultivated. Most girls read more than that; but most girls are not cultivated. What do most girls read?

Here I come to one of the melancholy aspects of human nature in general, if not of feminine nature in particular. Ruskin's question, "Do you know that if you read this, you cannot read that?" is so simple that it seems to slight the hearer's intelligence; yet it is justified by the persistent unintelligence of the reading world. With one life to live, with each day, and each minute, when it is gone, gone forever, we read the illustrated scandals of eloping chorus girls or of their kinswomen in high life at Newport or New York. Beyond this, we read the fiction of the day whether in magazines or novels; and we get it no longer at our own cost from such circulating libraries as filled the empty head of Lydia Languish, but from free public libraries given, it may be, to the people by generous men and women who have thought to educate thereby the neighbors and friends of their youth—temptation offered in the name of culture to those who eagerly accept the offering. Fiction is a fine art and as truly an instrument of culture as music or painting; but debased fiction is scarcely more cultivating than the song of the vaudeville spe-

cialist or the chromo awarded to the preserver of ten soap wrappers. The stage, too, is an instrument of culture; but the stage has produced both Shakespeare and the Roger Brothers.

I can readily understand the state of mind that makes intelligent "solid" reading difficult, if not impossible. A girl who has stood all day behind the counter of a "stuffy" shop may lack the nervous vigor for philosophy or political economy or for any history not narrative and romantic. To such a girl relief and delight may justly come through fiction; and with them may come the beginning of culture. No intelligent girl can read *The Newcomes* or *Pendennis* or *Henry Esmond* or *Vanity Fair* without some share in the joys and sorrows and sympathies of that great mind and greater heart which conceived them all; without some inward sense, however rudimentary, of what it means to say things worth saying and to say them well; without some discrimination between gentle manners, in high life or in low, and vulgarity of peasant or of prince. To love Thackeray is almost a liberal education; yet this great and intensely lovable master, one of the greatest and most lovable in all fiction, lies uncalled for on the shelf, condemned without a hearing as a pessimist and a cynic. "Ah, my worthy friend," said he, "it is astonishing how soft-hearted these cynics are. I dare say, if we could have come upon Diogenes by surprise, we would have found him reading sentimental novels and whimpering in his tub." "He could not," says a critic, "have written *Vanity Fair* as he has unless Eden had been shining in his inner eye."

Again, no healthy-minded girl comes face to face with the courageous womanliness of Elizabeth Bennet, rising through sweetness and good sense above a mother of

humiliating vulgarity, or the delicate conscience of Fanny Price, undervitalized but charming in her sensitive devotion, without learning much from the author of *Pride and Prejudice* and of *Mansfield Park;* without learning the efficiency of good sense and good humor in literature and in life; without discovering that a style with no ornament, a style which marches straight on, is, in the right hands, a wonderfully effective style, and that a book to be interesting need not leave the beaten track of everyday life. Still again, no girl with a touch of the romantic, such as every girl should have, can fail to be the happier and the more cultivated for knowing early and always the perennial king of English romance, the author of *Quentin Durward* and *Ivanhoe.* The mere mention of these three writers—all so great, yet each so different from either of the others—is enough to make us blush for the hours and the days that we have wasted on yellow newspapers and yellow novels and trivial magazines.

"But," it may be said, "no matter how much education an untrained girl would get from such authors if she gave herself up to them, will she—can she—give herself up to them? Can she read them with that zest which alone will make them memorable and inspiring?" With a little courage at the start, she can. Nothing about literature is more remarkable or more encouraging than the power of the greatest literature to reach all earnest human beings. Not to speak of the Bible, Shakespeare is read in the chamber and heard on the stage by men and women whose education stopped with the grammar school; and as to Homer we remember how the snowbound outcasts of Poker Flat were absorbed in the fate of "Ash-heels." Homer and Shakespeare are almost in a class by themselves; yet other

classics, not so great, may educate us and, while educating, may delight. I know that to some minds the very word classic is cold and repellent, suggesting something which people tell us we ought to like and which, in consequence, we like the less. It is well to remember a helpful word of Professor Barrett Wendell's, that a classic would not be a classic if it had not interested thousands of human beings, and that what has interested thousands of human beings cannot be without interest to us. Writing of more than transient interest—if written in good literary form—becomes in some measure a classic. No classic will interest every reader; but every reader, with a little experimenting, can find some classic that interests him. Having thus discovered among books which have stood the test of time some one that pleases him, let him read others by the same author, whose charm he has begun to feel, and make that author's work a part of himself. Then—so rapid is the growth of taste—he will find that trashy writing no longer meets his needs; he will find, also, that a second interesting classic writer is easier to discover than a first; in time he will find that some authors whom he rejected in his early experiments have become his closest friends. And after we have once intimately known great work and have felt the thrill of the growth that comes with such a knowledge, the process of cultivation advances fast. With it advances also, through the influence of what we read and through our unconscious or half-conscious absorption of it, our accuracy and power in the use of our own language. We have begun to live in the most interesting society—far more interesting than most of that society which frequents the houses of people whose good fortune we envy. At small cost we may have on our own table the best work of the greatest men and women of

all time, may think their thoughts, dream their dreams, see their visions. All that we need is a little staying power; for, as some one has said, "Every great writer must in some measure create the atmosphere in which he is to be enjoyed"; we must give him a little time. I have mentioned Thackeray's *Newcomes*. Before the opening chapter of *The Newcomes* the stoutest heart may quail. Read the chapter or skip it, as you wish; but do not because of it abandon the book.

I have said little about poetry; yet poetry has, as an educator, a certain practical advantage which Professor Wendell pointed out when he observed that of all the fine arts it is the most portable. You can carry in your pocket more fine art (for less money) in poetry than in anything else. I said your pocket; I might have said your head. And love of poetry may be acquired by almost all. Girls as a rule are born with it and need only make sure that it is not stifled in them; yet it is a love that every year may be cultivated and increased. Most girls, with even a grammar school education, care for Longfellow; most girls care for Tennyson; from these they may pass to others, widening their appreciation every year and every day. Tennyson's "Crossing the Bar" is no more helpful—and no more intelligible—than Browning's "Prospice," the inspiration of a man whom most girls reject unread. Such works as Professor Norton's "Heart of Oak Books," which bring together the best English poems for young people and introduce the reader to many authors at their best, are invaluable as starting-points. Indeed the girl who really knows the "Heart of Oak Books" (prose and verse) has no mean acquaintance with English literature. Such a girl, however, will not stop with such an acquaintance. She has tasted the delight of good reading and need no

longer be bidden to the feast. She has already begun to commit to memory the short poems that she loves best and to learn how they can transform what once were dull and waiting hours. Short poems for odd minutes—one to read for every day in the year—here is a course in culture which nobody is too poor to take, which nobody should be too dull to enjoy. When once a girl has gained the love of literature for its own sake, such a book as Professor Winchester's *Short Courses in English Reading,* which names the characteristic works of each important period in our literature, will serve as an admirable guide. Books, such as I have mentioned, that bring the reader face to face with the great authors themselves are vastly better than books about books, except as these latter may lead us to great authors whom we should otherwise neglect.

I have barely mentioned the Bible, which few of us read as we should, none of us as we might, and which—even apart from every religious consideration—if read little by little every day with an active mind, trains a girl's literary judgment as it can be trained by nothing else. The effect of the Bible on English style may be seen at its best in the work of John Bunyan—otherwise almost illiterate—or of Abraham Lincoln, into whose heart and speech the Bible early found its way. To this book almost alone our literature is indebted for these self-taught and universally acknowledged masters.

I am well aware that reading is only one means of culture. I have not forgotten the culture that comes of intimacy with Nature; and it were a nice question whether Emerson owed more to his Plato or to his pine tree. I have not forgotten that

> "There's no one season such delight can bring
> As summer, autumn, winter, and the spring,"

or that love of books is scarcely a blessing at all if it seals our eyes—which it should aid us in keeping open —to the sea, the mountains, and the stars. I take reading for what it is worth as one help only, but one which allies others to itself even as the five talents may become ten. For if the germ of culture once gets into the system, it propagates itself with marvelous speed. There are, it is true, individuals whom it affects in one part and not in others, lovers of literature who delight in vulgar vaudeville, lovers of music who devour detective stories and dime novels, lovers of the pure and high who by contrast enjoy—or try to think they enjoy—sporadic attacks of the impure and low; but, in general, culture in one art leads to taste in others, for it refines the intellect. And though she who has cultivated herself by reading may know little of painting or of music, she has put herself into that actively receptive condition which will make progress, even in those arts, rapid when the opportunity comes. She has learned that the greatest minds, like the sun and the stars, shine for all who have eyes and hearts to welcome their quickening rays. She may be a teacher of stubborn and stupid little children; she may write dull business letters at the dictation of vulgar men; she may sell hairpins all day behind a counter; she may make eyelets in a shoe factory; but when the minutes come that are her own, she steps instantly into a life from which no drudgery can divorce her—a life the breath of which inspires her daily work, however mean, with a kind of glory. For the work is her discipline, her part in the ceaseless renewal of that great and multifarious life which we call the world; and she can do it, for she has tasted the joy of the "unconquerable soul."

DESCRIPTION [1]

Joseph Russell Taylor

Any one who reads this essay is pretty sure to suspect that its author has more than a layman's knowledge not only of writing but of picture-making and sculpture as well. The guess is correct, for after his graduation from Ohio State University in 1887 Mr. Taylor gave much attention to drawing and painting, and in fact began his service on the Ohio State Faculty as a teacher of drawing. Since then he has been officially concerned with rhetoric and literature, and has constantly preached and practised the æsthetic approach to both literature and life. He has contributed verse to the magazines since 1890, and has published several volumes of lyrics. His first volume of verse, *The Overture,* came out in 1903, followed by *Wintergreen* in 1911, *What You Will* in 1921, and *Our Dancing Days* in 1923. The following essay on "Description" is taken from his *Composition in Narration,* and represents faithfully his theory of writing and his prose style.

Mr. Taylor, who was born in Circleville, Ohio, in 1868, is descended from a line of clergymen whose influence throughout eastern and central Ohio extends back to pioneer days.

I

A man's philosophy is borrowed; his art is his own. What a man thinks of things is doubtless interesting and characteristic; result of his breeding and education, it is his contemporary patent; he takes of the stream as engineers take of the power of wind and water. But what he does, what he makes, the use to which he puts his heritage, is the measure both of his value to us and of the man himself.

Yet our quaint habit is to look, almost exclusively, for philosophies, the ideas that are involved, in Sophocles

[1] From *Composition in Narration.* Reprinted through the courtesy of Joseph Russell Taylor and Henry Holt and Company.

and in Shakespeare. "If you've got the idea," said the famous German professor, whose name, unfortunately, I have forgotten, and whose subject was the madonna motive in painting, "if you've got the idea, you've got the whole thing." And he proceeded to prove this with lantern-slides in black and white. Think of that. Ruskin used to say that truths of color are the least important of all truths; and his ingenious and malapropos argument is made from the standpoint of a child who has achieved a drawing in outline, and who then by a happy afterthought proceeds to color it. Did Ruskin really believe that paintings are made in that way? Does anybody have to be told that paintings are color? Yet we keep to our naïve critical program, as if one should give a dinner composed only of printed bills of fare, voluptuous orgy, or of books about digestion, ethical uplift; the idea of it, you know.

Great are ideas, our only available source of supply of power. That was a great idea that first gave into our hands, by the burning of sticks, a little of the sun's stored power to use for ourselves. That was a great idea that put to our use the coal and the oil and the gas stored in the earth; and they are great ideas that foresee the exhaustion of this source, that have taught us to use water as "white fire," and are teaching us to store power in corn-leaves and mirrors. One supposes the ideas themselves originally came from the sun. These are means to life; it is life itself that dreams and remembers by the hearth-fire, and whose fire-driven journeys end in lover's meeting. And do you need to be told again that life is art? Art uses ideas; it is not a philosophy, it is imagination.

We, therefore, who in trying to tell our stories are dealing with the practice of an art must deal at once

with the whole product, the idea and the image. If we keep in mind always our purpose and end, we shall be the less distracted with ways and means. We are to find out what to tell, we are to determine and fix and make unmistakably sure this "what"; and we are not to concern ourselves too much with how to tell it. At times it seems that our books of composition are so excessively helpful that they embarrass us; and many of our courses in composition are so rich in "stunts" that one's writing remains a "stunt," and in the multiplication of means one loses sight of the end. The end is that we shall tell the truth; two things, "truth," and "telling," two things in one. The end is a perfect narration.

Description, which is a means to that end, is commonly set apart for separate practice. But the practice is false that develops one's skill in narrating ideas on the one hand and one's skill in describing images separately on the other hand. The two are one practice, one process, and together simultaneously build the story. They are never really separate. If we use the restricted and partial meaning of narration, in the sense of a process, without reference to results, we may say it is equivalent to that function of painting which we call, variously, the drawing, or the outline, or the composition; and by the same analogy we may call description the equivalent of color. Every painter knows that these two are inseparately and simultaneously one. A line is where two colors meet. Color is the light by which you see the line. The painter's attention, to be sure, may be relatively more occupied with line, or it may be more occupied with light; but this by no means indicates that drawing and coloring, or in music melody and harmony, or in writing narration and description, are separate processes. Of themselves, the terms are nothing. You do

not need names for your processes. One question is enough for your attention; how shall you express what you have seen to be the truth, how shall you get it into words?

II

Let us try an experiment with a relic of antique art; the armless Venus, a familiar image in our houses; a fragment of stone put to the use, we say, of expressing an idea of womanhood, and there are books and controversies aplenty about that idea. Place her before you in full front view, at your eye's level, and fully illuminated with light from behind you. Thus seen, her features, the mold of her body, the folds of the draperies flatten and melt and fuse into the white silhouette we know so well. You get most of all the broad sweep of line, the sure and subtle rhymes of the attitude, the head tilted to the right on the droop of the right shoulder and the lift of the right hip.

Now place her, again in full opposition to your eye, against the window light. The silhouette is the same, but details are lost in its flat darkness, and it has become suddenly keen and crystalline of outline. This remains most of all, the outline; and it is accentuated by the slender silver lines of light caught on her throat and her sides. One gets, more sleek and slender than before, the flowing continuity, the crisp sure-footed balance, of her pose.

And now put her, still in full front view, in a single side-light, say first from your right. The full figure starts immediately and dramatically into vivid revelation. You are given a bold harmony of details; the sweep of the hair back from the left temple, the almost sullen

sweetness of the lips, the dimple in the throat, the shadow of the breast on the fragment of the round arm, the projection of the knee toward you. Your impression is intensive, and those perfect outlines are half forgotten in richness of detail, in the brilliance and daring of her modeling. Or, reverse this, let the side-light come from your left. The image is instantly softer; the shadows are less obvious, the lights are broader and merge into each other. It is like a change of mood; and the motionless, flexible, buxom creature, full weight on light foot, seems much more shy and musing.

All these have been with the full opposition of the front view. Return now, for a moment more, to the side-light from your right, and keep that illumination constant while we try other points of view, turning the statue by degrees in a circle away from the light. With this motion, the draped projection of the left knee accentuates itself, and the crevices of shadow on the bare torso enrich and deepen and mingle until a totally new impression strikes you with the figure in profile, its back to the light, and the front of the body outlined in narrow shadow. There is thus a richer coquetry of the tilted head; the body is sharply and gracefully slender; and on the forward knee the slipping draperies are deepened into something like the breadth of modern costume.

If you turn her until the armless shoulder seems to touch the chin, so that the head inclines directly away from you, you find that the back is charming too; you take new delight in those delicate flat contours that run from the shoulder blades to the neck, where is the loose lock of hair; and when she has turned entirely away from you, you will have to hunt out new words for the new impression. The artful richness of the hair is now more evident, and the bold oblique curves of the dra-

peries, so fine a correction and balance of the figure's sway to the right. From this point of view the figure is most completely given, with the profile of the right side following down the straight curves of the draped right leg. And in that smooth flat rondure of the bare back you get an impression of firm and frank good health, the clear sweet excellence of the flesh, together with an added quality about the whole pose; it looks virginal, abstracted, pensive; it has a dear humility, it is almost comically tender; and out of the unfamiliar look upon so familiar a creature you get new admiration and new pity.

And last, finishing the circle, bring her around to the profile facing the light. This is the side of the arm, and the straight leg; and in profile here one gets the sharpest impress of her lightness. The pose is buoyant indeed; perfectly natural, relaxed, resting, but full of motion suspended, like a bird just perched. And the pretty head thrust forward and the face's profile here without a shadow are most youthful and animated.

Have I tired you out? There are yet a hundred choices and chances with the Venus. Put her between two windows, and watch the play of reflections and cross-lights. Light the lamp over her head, or at her feet, and see how differently her beauty expresses itself. Change the color of the light, or of the background, and see how she adapts herself to the change. She's constantly changing. Custom cannot stale her infinite variety. She steals this moment and that into your vision; she is harmony and attune for your mood, rest for your weariness, dignity for your discouragement, pride for your defeat; and most of all she is the right correction for that contempt of all the flesh which is ours in bad moments. Vulgarity,—she's not thinking of you!—vul-

garity whose other name is prudery, cannot shame her into a detected wanton. Tragedy cannot frighten back into folly, nor hate nor death, the right loveliness that she is. This is what we were when we lived. We no more than half knew it, but we were beautiful.

III

Do you see how relative a thing is description? How it is again and again one of the successive moments of narration? How it is a thing of countless choices, as we have proved our statement of the truth to be, and how it must adapt itself to this statement? Do you see how it is the vocabulary of your idea? And how then shall you describe? Why, describe as it seems to you in the story.

We read a pleasantly gossiping history of how Chopin composed, say, a particular nocturne; how he got lost in the Catacombs, was it?—that's those swinging progressions and resolutions from minor to minor; until he came upon a midnight procession of monks in the underground cloister, candles, and chants,—that's the hymn-like interlude. But you or I could make as good an interpretation if we should say it is the wind blowing, and in the lull of the wind a bird singing; or it is waves rolling under a gray sky, and the interlude a burst of sunlight. All such attempts to limit and fix the meaning of any art must fail. The reduction to absurdity is seen in those dreadful "descriptive" pieces we still hear occasionally: "The Storm," say; the pianist's hands flying up and down the keyboard in an increasing agitation, that's the wind; the pianist suddenly sitting on the bass keys, thunder; running a finger down the keyboard and your spine, lightning; and interluding a few chords from

the "Rock of Ages" for religion, you know, and all that sort of thing. I once knew a little girl who composed such a descriptive piece. I think it was as good as any. First a little bird sang—that was a melody of three notes in the C major of this life; then the kangaroo came in, entering the stage from the bass notes and creeping stealthily up several octaves; then the hunter entered with the treble notes, and pursued the kangaroo back down the keyboard. This simple chase was terminated by a full-handed crash—the gun, of course; and last, after an impressive interval, the little bird sang again.

Well, but, you say, didn't even MacDowell, our best, do just that? In those suites he composed for the orchestra, aren't there winds in leaves, and echoes from cliffs, and all sorts of quaint birds and elves and oboes, in the music of the haunted forest? Yes; but I hold that this music does not depend for its meaning upon this interpretation; that it is complete in itself, and unexhausted by any one translation, that you never quite thus get its meaning out, and that other interpretations may easily be found which are quite as true to its progression. Above all, it is beautiful, reaching through discords and transitions its final harmony, plotting it all into a narration, as surely as a problem in mathematics reaches its quotation. It is life for a moment heard, and heard beautiful.

In what we are doing, nothing but the image of the word will keep the idea. Words are not as musical as tones, neither are they as colorful as pigments; far less vivid than either of these, they have nevertheless a much greater inclusion, they have something of the power of both. As you have been trying to find out the truth, you have been trying to find out the words that will contain and interpret that truth. Do not be misled. There is no

such thing as an inexpressible idea; it is not an idea until it is expressed. The word "indescribable" is merely a proclamation of defeat. Describe as you go, describe in every word. There's no standard description; things change their appearance every minute; and, most of all, no one can describe for you.

IV

Two young people were of such constant comradeship that they went everywhere together as a matter of course, and without need or thought of specific engagements. A boy and a girl, there was no more sentimentality in their fellowship than if they had been of one sex. So it seemed, at least, to the boy. So it was managed, no doubt, by the girl. He thought as little of hurting his friend as he would have done if his friend had been a boy, when he invited another girl, who bantered him into it, to go with him to a certain formal dance. The two friends together had not considered the dance, and this was equivalent, by their code, to a decision not to go. But the girl appeared also at the dance. She had had no invitation, because it was thought by the others that, of course, if she intended to come at all, she would come with her usual companion. But she had telegraphed to an old friend to come from another town and be her escort and partner. A girl of distinguished presence, she had never presumed upon it; but for this occasion she spent a month's allowance on her gown alone. She proved to be the feature of the dance; the sympathetic and delighted company fell at once into her train; and her dance-book was so immediately filled with engagements that there was no dance left when her old comrade came to ask for one.

In this bare record of an actual occurrence I have already been compelled carefully to describe, and you, no doubt, will have visualized far beyond the words I

have employed. And to get at the truth of the incident, to make sure that the images express the idea, to tell, in short, the story I have merely sketched, I shall have to organize all necessary or desirable descriptions into the plot of my little narrative. My method will be the same as in the other illustrations we have considered, a successive rejection and selection of innumerable choices until every word shall contribute to the making of my "point." I myself was not, believe me, the actual boy of the story; but even if I had been, the necessity would be laid upon me to imagine it all. I shall describe always for my purpose, describe always in the mood. The measure of my success will be that you understand the causes from experiencing the effects of the incident. So I shall make sentence after sentence of impression reveal to me the fool that I am, and the perfect friendship I have lost; sentence after sentence must build up my admiration of so fine a fighter, in words that follow her brilliant figure through the dance, must build up my pride in her no less veritable for being dispossessed, and my plea for forgiveness no less passionate for being comically aware that it has no standing. Of course I cannot describe her costume except by effect, nor her dancing. Was she not dancing on my heart? And was her cruelty not justice upon my own brutal thoughtlessness? Fancy it a moment; let us see her all in white; and watching stealthily for her reappearances, and, denied the meeting of her eyes, let us at least follow her dancing feet. They played like flames, be sure, like flames that licked and tongued, curve on curve, about the polished floor, and seemed nowhere to alight. They were like wandering darting snowflakes. They were like moths that touch and touch again on sunset water. And I thought they ran back over the ways we used to go

together, and by a quaint reversion picked up and took away with them, from beside my own lumbering tracks, every fairy footprint.

v

This first adventure befell two friends of mine during their honeymoon. It was in a great hotel in an eastern city, and it was in the middle of the night. The lady was awakened sharply, not to say brutally, to find that her husband was shaking her, and hissing in her ear that the hotel was on fire. They rushed out of the room, kimono'd and barefoot, the wife beseeching to be allowed to go back and get her jewels; but she was raced down the hall to the elevator. And there, with his hand on the button, her husband woke from his nightmare. He had been in his younger days a famous sleepwalker.

The second adventure is of two other friends, and happened during the same year, which was their marriage year also. The great apartment house in which they were living was burned; and although the fire was in the afternoon, they rescued only with great difficulty the most valuable of their household goods, most of which, of course, were wedding presents.

We have already considered the psychological trick of association, and need not now stop again to trace the steps by which the two narratives might be combined to tell the specific story. The first incident furnishes the motive for my plot, the second for my characterization or description; for I saw the fire, and have the actual memories to use. Nor is it necessary to show again how this eye-witness and these facts are not necessarily more authentic for my purpose than other circumstances might be. I must prove that; I must "make it good." In this instance description will be much more simple, direct,

general, than in the previous instance, of the dance; for a fire, or any disaster, comes home to all people in much the same way. Nevertheless I must select only such memories as will contribute to the development of my motive. I am not to describe a fire, I am to tell my story. Therefore many details of the experience, good in themselves, will not serve my purpose. For example, the following note—for I confess it again, I have always been infatuated enough to write records, if not always to keep or use them,—is as permanently vivid to me as any memory; but as my motive is to be that of the first little narrative, as this is to be somehow connected with one who walks in his sleep, even in his honeymoon, I discover that the particular image here preserved has less immediate value than other details that may appear later.

Word of the fire reached me by telephone; and I went first to my friend's empty office, where, from those high windows on the tenth floor, I looked out and saw the burning hotel in full view, a half-dozen city blocks away. There was the familiar city landscape in a rich level afternoon light. The long oblique street ran into a black mass of people about the tiny twinkling brass of the fire-engines. The big red somber bulk of the hotel stood impassive, intact; but all along the southern half of the top and the upper stories was the keen bright bicker of the pointed flames. They looked as silent and gentle and harmless as flowers, nodding and dancing along the topmost battlements. All this was against a huge vague bank of smoke that rolled and spread away over the sunlit city.

Of course I came out to the fire. I found my friends after a long search through the crowds, many of whom were as homeless upon the street as they, the cheerful

two whose only visible property was a handbag in which were the lady's jewels. Immediately, do you see, I touch a detail that will be of my story; and others will doubtless appear, without further indication, in the continued record that follows.

We all stood watching and discussing the fire, as the evening fell, in a myriad-crowded, full-impressioned, half-gay dreaminess. What can I save of the images? There it was summer twilight under those great, dark, doomed walls. The city, and the hosts of people, teemed and hummed and murmured like sleep, in an old dry light, detached and quaint, about us. The wet street was a flat long coil of the snake-like lines of hose. The fire-engines volleyed fan-shaped fountains of sparks, but blast on blast we did not seem to hear the thunder of them. The dark wall over us was vaguely smoke-wrapped, for the wind was away; there were sudden transient brilliant illuminations of fiery windows, with the fireman silhouetted there; and there were lanterns creeping on the dark fire-escapes. And there were we watching until the walls, so long the familiar and cheerful constellation of lighted windows hung aloft in the night, were a mere black shadow. The fire was under hand; there was no doubt that the fire was out. And there was indeed no doubt that my friends were out.

Something of this is evidently necessary for my story, if I am to have my sleepwalker prophesy a real fire; but I must remember that I am not to describe anything for itself, nor for the sake—save the mark!—of good description. I must "orchestrate" it, make it play the part of the basses and brasses to build up a harmonic background, while the melody is carried on by such quaint and adventurous fiddles as are suggested in the following additional note.

When the alarm was turned in, neither of the couple was at home. My friend came from his office on a run, picking up on the way a workman, one of his own men, by happy chance. The two found a ladder, and made an independent excursion up the fire-escape. This was from the fortunate privacy of a little adjoining back-yard, into which now they began to cascade things. The young mistress of these things arrived in time to see the descent, among many other fabrics into the heap on the outspread rugs, of her wedding gown. In one of the last trips my friend had over his shoulder, wrapped in a sheet, a collection of cut-glass vessels; and as he left the fire-escape for the ladder, the last twenty or thirty feet of the descent, the alarm came from the firemen and the police that the wall was falling. His slide down the ladder, on his toes and elbows, was instantaneous, but not a bit of glass was broken. This was all before I came. Part of us then mounted guard over the stuff in the dark little yard, while the others made an expedition, stole a horse and wagon, and carted half of the things away to safety. With the remainder we filled a cab; and last, my friend and I squeezed into it ourselves—lying curled, I remember, close against the little roof of the vehicle—and so drove away as in some strange nightmare of frolic.

Oh, I find I have much more of it, piously recorded: bizarre exits down the fire-escapes of ladies who had been dressing for dinner, and whose bath-robes were like the famous mantle of Monna Vanna; or the next day's salvage, when one looked up from the unroofed court, from the acrid-smelling black cistern of burned galleries, and saw the pure zenith slide a white cloud across the blue, and where immaculate women met on sodden and dishonored stairs to compare desolations; but it is not my intention now to tell the story we are considering. Here, too, description is seen to be pretty much answering the question "What's it like?" But the point is that I must

use no description for its own sake. The point is that I must describe my story. The point is that I must imagine all the time.

VI

Therefore you must imagine your story. It is not enough to think it out; you must experience it. However you may express it, you must live it. A painter told me recently that he had made, for his picture of the year, some fifteen sketches in different schemes; this was his exploration of his idea; but this patient recombination, experiment after experiment, would profit him nothing unless he retained and gave out, kept and expressed, his delight in what he painted.

With this correction our advice to let the details go, to express the idea, will be seen to be consistent. We must have details, the right details, and their being right will be evidenced by our pleasure in them. The whole field, therefore, of method, the personality that is in classic method as well as in romantic, can be reduced to keeping one's attention upon the end, the story itself as you imagine it; whatever your method, you will not go wrong if you imagine it out to the end. And it is again better, here and now, to use the illustration rather than the argument; and I shall be fearlessly personal, for these things are not told for their own sake only.

Years ago, in old vacation swimming days, and in a prosy little western river, I used to swim across to the diving log with a notebook and a pencil in my teeth; these implements were deposited on the log; and up from every dive I came to scribble in the notebook another wet-fingered phrase or two, of the under-water world, of how the sun looked like a lamp in a dome, of how

my swimming comrades were turned golden, green, beautiful! For I was writing a poem on Hylas and the nymphs. So in another year I was writing upon a theme whose symbol and image was the wind blowing, and, of course, a girl in the wind; I watched five seasons through, watched and caught at and tried to express those beautiful living images. I remember an undated midwinter in Chicago—or was it New York?—when at the corners of those deep city canyons every woman became, this instant and that, statuary beautiful as the winged Victory. And so similarly I have filled notebooks with recorded fragments of conversation that seemed to me characteristic of the speakers, or otherwise natural and contemporary habit: as of the young girl who said she was so tired she could taste it; as of the old gentleman who always said, when it began to rain, "Well, we must do as they do in Germany,—let it rain"; and of conceiving in each case myself to be the speaker. If I may paraphrase Stevenson, that, like it or not, is the way to learn to tell the truth; whether I have profited or not, that is the way. Live it out for yourself, and all these things shall be added unto you, the rules and the rules, as you grow in wise experience of your own life.

AMERICAN MANNERS[1]

Wu Tingfang

Wu Tingfang has been one of the most influential forces of the last century in bringing together in mutual understanding the peoples of the East and the West. He was born in Kwang-tung province of southern China in 1842 and educated in Saint Paul's College, Canton. He read law in Lincoln's Inn, London, from 1874 to 1877. In 1882 he became closely associated in official life with Li Hung Chang and continued throughout a long life to forward and interpret the international policies of the party that was reshaping the national life of China. He was Chinese minister to the United States from 1896 to 1902 and again in 1908, and was appointed a third time as representative of the newly established Republic of China in 1912. His native talent, his cosmopolitan training, and his fortunate official associations all conspired to make him a faithful and sympathetic interpreter of varied national traits. His engaging frankness overlaying the delicate courtesy of oriental peoples gives us a peculiarly interesting mirror for seeing our national traits as they appear to others. He uses the English language with ease, but with a certain foreign tang that is readily felt, if not so easily pointed out. Wu Tingfang died in 1922.

Much has been written and more said about American manners, or rather the American lack of manners. Americans have frequently been criticized for their bad breeding, and many sarcastic references to American deportment have been made in my presence. I have even been told, I do not know how true it is, that European diplomats dislike being stationed in America, because of their aversion to the American way of doing things.

Much has been written and said about Chinese manners, not only by foreigners, but also by Chinese. One

[1] From *America Through the Spectacles of an Oriental Diplomat* by Wu Tingfang, copyright, 1914. Reprinted by permission of Frederick A. Stokes Company.

of the classics, which our youth have to know by heart, is practically devoted entirely to manners. There has also been much adverse criticism of our manners, or our excess of manners, though I have never heard that any diplomats have, on this account, objected to being sent to China. We Chinese are therefore in the same boat as the Americans. In regard to manners neither of us find much favor with foreigners, though for diametrically opposite reasons: the Americans are accused of observing too few formalities, and we of being too formal.

The Americans are direct and straightforward. They will tell you to your face that they like you, and occasionally they also have very little hesitation in telling you that they do not like you. They say frankly just what they think. It is immaterial to them that their remarks are personal, complimentary, or otherwise. I have had members of my own family complimented on their good looks as if they were children. In this respect Americans differ greatly from the English. The English adhere with meticulous care to the rule of avoiding everything personal. They are very much afraid of rudeness on the one hand, and of insincerity or flattery on the other. Even in the matter of such a harmless affair as a compliment to a foreigner on his knowledge of English, they will precede it with a request for pardon and speak in a half-apologetic manner, as if complimenting were something personal. The English and the Americans are closely related; they have much in common, but they also differ widely, and in nothing is the difference more conspicuous than in their conduct. I have noticed curiously enough that English Colonials, especially in such particulars as speech and manners, follow their quondam sister colony rather than the

mother country. And this, not only in Canada, where the phenomenon might be explained by climatic, geographic, and historic reasons, but also in such antipodean places as Australia and South Africa, which are so far away as apparently to have very little in common either with America or with each other. Nevertheless, whatever the reason, the transplanted Englishman, whether in the arctics or the tropics, whether the Northern or the Southern Hemisphere, seems to develop a type quite different from the original stock, yet always resembling his fellow emigrants.

The directness of Americans is seen not only in what they say, but in the way they say it. They come directly to the point, without much preface or introduction; much less is there any circumlocution or "beating about the bush." When they come to see you they say their say and then take their departure; moreover they say it in the most terse, concise, and unambiguous manner. In this respect what a contrast they are to us! We always approach each other with preliminary greetings. Then we talk of the weather, of politics or friends, of anything, in fact, which is as far as possible from the object of the visit. Only after this introduction do we broach the subject uppermost in our minds, and throughout the conversation polite courtesies are exchanged whenever the opportunity arises. These elaborate preludes and interludes, may, to the strenuous ever-in-a-hurry American, seem useless and superfluous, but they serve a good purpose. Like the common courtesies and civilities of life they pave the way for the speakers, especially if they are strangers; they improve their tempers, and place them generally on terms of mutual understanding. It is said that some years ago a foreign consul in China, having a serious complaint to make on behalf

of his nation, called on the Taotai, the highest local authority in the port. He found the Chinese official so genial and polite that after half an hour's conversation, he advised the complainant to settle the matter amicably without troubling the Chinese officials about the matter. A good deal may be said in behalf of both systems. The American practice has at least the merit of saving time, an all-important object with the American people. When we recall that this remarkable nation will spend millions of dollars to build a tunnel under a river, or to shorten a curve in a railroad, merely that they may save two or three minutes, we are not surprised at the abruptness of their speech. I, as a matter of fact, when thinking of their time-saving and abrupt manner of address, have been somewhat puzzled to account for that peculiar drawl of theirs. Very slowly and deliberately they enunciate each word and syllable with long-drawn emphasis, punctuating their sentences with pauses, some short and some long. It is almost an effort to follow a story of any length; the beginning often becomes cold before the end is reached. It seems to me that if Americans would speed up their speech after the fashion of their English cousins, who speak two or three times as quickly, they would save many minutes every day, and would find the habit not only more efficacious, but much more economical than many of their time-saving machines and tunnels. I offer this suggestion to the great American nation for what it is worth, and I know they will receive it in the spirit in which it is made, for they have the saving sense of humor.

Some people are ridiculously sensitive. Some years ago, at a certain place, a big dinner was given in honor of a notable who was passing through the district. A Chinese, prominent in local affairs, who had received an

invitation, discovered that, though he would sit among the honored guests, he would be placed below one or two whom he thought he ought to be above, and who, he therefore considered, would be usurping his rightful position. In disgust he refused to attend the dinner, which, excepting for what he imagined was a breach of manners, he would have been very pleased to have attended. Americans are much more sensible. They are not a bit sensitive, especially in small matters. Either they are broad-minded enough to rise above unworthy trifles, or else their good Americanism prevents their squabbling over questions of precedence, at the dinner table, or elsewhere.

Americans act up to their Declaration of Independence, especially the principle it enunciates concerning the equality of man. They lay so much importance on this that they do not confine its application to legal rights, but extend it even to social intercourse. In fact, I think this doctrine is the basis of the so-called American manners. All men are deemed socially equal, whether as friend and friend, as President and citizen, as employer and employee, as master and servant, or as parent and child. Their relationship may be such that one is entitled to demand, and the other to render, certain acts of obedience, and a certain amount of respect, but outside that they are on the same level. This is doubtless a rebellion against all the social ideas and prejudices of the old world, but it is perhaps only what might be looked for in a new country, full of robust and ambitious manhood, disdainful of all traditions which in the least savor of monarchy or hierarchy, and eager to blaze as new a path for itself in the social as it has succeeded in accomplishing in the political world. Combined with this is the American characteristic of saving time. Time is pre-

cious to all of us, but to Americans it is particularly so. We all wish to save time, but the Americans care much more about it than the rest of us. Then there are different notions about this question of saving time, different notions of what wastes time and what does not, and much which the old world regards as politeness and good manners Americans consider as sheer waste of time. Time is, they think, far too precious to be occupied with ceremonies which appear empty and meaningless. It can, they say, be much more profitably filled with other and more useful occupations. In any discussion of American manners it would be unfair to leave out of consideration their indifference to ceremony and their highly developed sense of the value of time, but in saying this I do not forget that many Americans are devout ritualists, and that these find both comfort and pleasure in ceremony, which suggests that after all there is something to be said for the Chinese who have raised correct deportment almost to the rank of a religion.

The youth of America have not unnaturally caught the spirit of their elders, so that even children consider themselves as almost on a par with their parents, as almost on the same plane of equality; but the parents, on the other hand, also treat them as if they were equals, and allow them the utmost freedom. While a Chinese child renders unquestioning obedience to his parents' orders, such obedience as a soldier yields to his superior officer, the American child must have the whys and the wherefores duly explained to him, and the reason for his obedience made clear. It is not his parent that he obeys, but expediency and the dictates of reason. Here we see the clear-headed, sound, common-sense business man in the making. The early training of the boy has laid the foundation for the future man. The child too has no com-

punction in correcting a parent even before strangers, and, what is stranger still, the parent accepts the correction in good part, and sometimes even with thanks. A parent is often interrupted in the course of a narrative, or discussion, by a small piping voice, setting right, or what it believes to be right, some date, place, or fact, and the parent, after a word of encouragement or thanks, proceeds. How different is our rule that a child is not to speak until spoken to! In Chinese official life under the old régime it was not etiquette for one official to contradict another, especially when they were unequal in rank. When a high official expressed views which his subordinates did not endorse, they could not candidly give their opinion, but had to remain silent. I remember that some years ago some of my colleagues and I had an audience with a very high official, and when I expressed my dissent from some of the views of that high functionary, he rebuked me severely. Afterward he called me to him privately, and spoke to me somewhat as follows: "What you said just now was quite correct. I was wrong, and I will adopt your views, but you must not contradict me in the presence of other people. Do not do it again." There is, of course, much to be said for and against each system, and perhaps a blend of the two would give good results. Anyhow, we can trace in American customs that spirit of equality which pervades the whole of American society, and observe the germs of self-reliance and independence so characteristic of Americans, whether men, women, or children.

Even the domestic servant does not lose this precious American heritage of equality. I have nothing to say against that worthy individual, the American servant (if one can be found); on the contrary, none is more faithful or more efficient. But in some respects he is unique

among the servants of the world. He does not see that there is any inequality between him and his master. His master, or, should I say, his employer, pays him certain wages to do certain work, and he does it, but outside the bounds of this contract, they are still man and man, citizen and citizen. It is all beautifully, delightfully legal. The washerwoman is the "wash-lady," and is just as much a lady as her mistress. The word "servant" is not applied to domestics; "help" is used instead, very much in the same way that Canada and Australia are no longer English "colonies," but "self-governing dominions."

We of the old world are accustomed to regard domestic service as a profession in which the members work for advancement, without much thought of ever changing their position. A few clever persons may ultimately adopt another profession, and, according to our antiquated conservative ways of thinking, rise higher in the social scale, but, for the large majority, the dignity of a butler, or a housekeeper, is the height of ambition, the crowning point in their career. Not so the American servant. Strictly speaking, there are no servants in America. The man, or the woman as the case may be, who happens for the moment to be your servant, is only servant for the time being. He has no intention of making domestic service his profession, of being a servant for the whole of his life. To have to be subject to the will of others, even to the small extent to which American servants are subordinate, is offensive to an American's pride of citizenship; it is contrary to his conception of American equality. He is a servant only for the time, and until he finds something better to do. He accepts a menial position only as a stepping stone to some more independent employment. Is it to be wondered

at that American servants have different manners from their brethren in other countries? When foreigners find that American servants are not like servants in their own country, they should not resent their behavior; it does not denote disrespect; it is only the outcrop of their natural independence and aspirations.

All titles of nobility are by the Constitution expressly forbidden. Even titles of honor or courtesy are but rarely used. "Honorable" is used to designate members of Congress; and for a few Americans, such as the President and the ambassadors, the title "Excellency" is permitted. Yet, whether it is because the persons entitled to be so addressed do not think that even these mild titles are consistent with American democracy, or because the American public feels awkward in employing such stilted terms of address, they are not often used. I remember that on one occasion a much respected Chief Executive, on my proposing, in accordance with diplomatic usage and precedent, to address him as "Your Excellency," begged me to substitute instead "Mr. President." The plain democratic "Mr." suits the democratic American taste much better than any other title, and is applied equally to the President of the Republic and to his coachman. Indeed, the plain name John Smith, without even "Mr.," not only gives no offense, where some higher title might be employed, but fits just as well, and is in fact often used. Even prominent and distinguished men do not resent nicknames; for example, the celebrated person whose name is so intimately connected with that delight of American children and grown-ups, the "Teddy bear." This characteristic, like so many other American characteristics, is due not only to the love of equality and independence, but also to the dislike of any waste of time.

In countries where there are elaborate rules of etiquette concerning titles and forms of address, none but a master of ceremonies can hope to be thoroughly familiar with them, or to be able to address the distinguished people without withholding from them their due share of high-sounding titles and epithets; and, be it whispered, these same distinguished people, however broad-minded and magnanimous they may be in other respects, are sometimes extremely sensitive in this respect And even after one has mastered all the rules and forms, and can appreciate and distinguish the various nice shades which exist between "His Serene Highness," "His Highness," "His Royal Highness," and "His Imperial Highness," or between "Rt. Rev." and "Most Rev.," one has yet to learn what titles a particular person has, and with what particular form of address he should be approached, an impossible task even for a master of ceremonies, unless he always has in his pocket a Burke's Peerage to tell him who's who. What a waste of time, what an inconvenience, and what an unnecessary amount of irritation and annoyance all this causes. How much better to be able to address any person you meet simply as Mr. So-and-so, without unwittingly treading on somebody's sensitive corns! Americans have shown their common sense in doing away with titles altogether, an example which the sister Republic of China is following. An illustrious name loses nothing for having to stand by itself without prefixes and suffixes, handles and tails. Mr. Gladstone was no less himself for not prefixing his name with Earl, and the other titles to which it would have entitled him, as he could have done had he not declined the so-called honor. Indeed, like the "Great Commoner," he, if that were possible, endeared himself the more to his countrymen be-

cause of his refusal. A name, which is great without resorting to the borrowed light of titles and honors, is greater than any possible suffix or affix which could be appended to it.

In conclusion, American manners are but an instance or result of the two predominant American characteristics to which I have already referred, and which reappear in so many other things American. A love of independence and of equality, early inculcated, and a keen abhorrence of waste of time, engendered by the conditions and circumstances of a new country, serve to explain practically all the manners and mannerisms of Americans. Even the familiar spectacle of men walking with their hands deep in their trousers' pockets, or sitting with their legs crossed, needs no other explanation, and to suggest that, because Americans have some habits which are peculiarly their own, they are either inferior or unmanly, would be to do them a grave injustice.

Few people are more warm-hearted, genial, and sociable than the Americans. I do not dwell on this, because it is quite unnecessary. The fact is perfectly familiar to all who have the slightest knowledge of them. Their kindness and warmth to strangers are particularly pleasant, and are much appreciated by their visitors. In some other countries, the people, though not unsociable, surround themselves with so much reserve that strangers are at first chilled and repulsed, although there are no pleasanter or more hospitable persons anywhere to be found when once you have broken the ice, and learned to know them; but it is the stranger who must make the first advances, for they themselves will make no effort to become acquainted, and their manner is such as to discourage any efforts on the part of the visitor. You may travel with them for hours in the

same car, sit opposite to them, and all the while they will shelter themselves behind a newspaper, the broad sheets of which effectively prohibit any attempts at closer acquaintance. The following instance, culled from a personal experience, is an illustration. I was a law student at Lincoln's Inn, London, where there is a splendid law library for the use of the students and members of the Inn. I used to go there almost every day to pursue my legal studies, and generally sat in the same quiet corner. The seat on the opposite side of the table was usually occupied by another law student. For months we sat opposite each other without exchanging a word. I thought I was too formal and reserved, so I endeavored to improve matters by occasionally looking up at him as if about to address him, but every time I did so he looked down as though he did not wish to see me. Finally I gave up the attempt. This is the general habit with English gentlemen. They will not speak to a stranger without a proper introduction; but in the case I have mentioned surely the rule would have been more honored by a breach than by the observance. Seeing that we were fellow students, it might have been presumed that we were gentlemen and on an equal footing. How different are the manners of the American! You can hardly take a walk, or go for any distance in a train, without being addressed by a stranger, and not infrequently making a friend. In some countries the fact that you are a foreigner only thickens the ice; in America it thaws it. This delightful trait in the American character is also traceable to the same cause as that which has helped us to explain the other peculiarities which have been mentioned. To good Americans, not only are the citizens of America born equal, but the citizens of the world are also born equal.

POETIC PEOPLE[1]

Max Eastman

It seems only fitting that *The Enjoyment of Poetry,* from which "Poetic People" is taken, should be written by a poet. It will be interesting indeed to know whether the fame of Max Eastman as a writer will rest upon his somewhat modernistic verse or upon this stimulating discussion of how poetry should be used in order to serve its essential purpose, enjoyment. That the discussion tends toward the philosophical is but natural both because the subject matter and the point of view taken permit it and because of the background of interest Max Eastman brings to it. During his undergraduate days at Williams College and his years as a graduate student at Columbia University he was deeply interested in philosophy, so deeply indeed that he was asked to become an assistant in the teaching of philosophy at the latter institution; later he became an associate professor of philosophy and held that position until 1911.

He had with his deep interest in philosophy a strong passion for social and economic equality, which has been expressed in active fighting for the principles he espoused. He was president and editor of *The Masses,* a periodical of liberalism which enjoyed a decidedly stormy career. In 1910 he organized the First Men's League for Woman's Suffrage. His strong resentment of inequalities resulting from the existing social order is frequently found both in his verse and his prose writings. His best known collections of poems are *Child of the Amazons and Other Poems* and *Colors of Life,* while his prose writings include *Sense of Humor* and *Journalism versus Art.* One frequently finds poems and essays written by him in the leading magazines. He was born January 4, 1883, at Canandaigua, New York.

A SIMPLE experiment will distinguish two types of human nature. Gather a throng of people and pour them into a ferry-boat. By the time the boat has swung into the river you will find that a certain proportion have taken the trouble to climb upstairs in order to be out on deck and see what is to be seen as they cross over. The

[1] From *Enjoyment of Poetry,* copyright, 1913, by Charles Scribner's Sons. Reprinted by permission of the publishers.

rest have settled indoors to think what they will do upon reaching the other side, or perhaps lose themselves in apathy or tobacco smoke. But leaving out those apathetic, or addicted to a single enjoyment, we may divide all the alert passengers on the boat into two classes: those who are interested in crossing the river, and those who are merely interested in getting across. And we may divide all the people on the earth, or all the moods of people, in the same way. Some of them are chiefly occupied with attaining ends, and some with receiving experiences. The distinction of the two will be more marked when we name the first kind practical, and the second poetic, for common knowledge recognizes that a person poetic or in a poetic mood is impractical, and a practical person is intolerant of poetry.

We can see the force of this intolerance too, and how deeply it is justified, if we make clear to our minds just what it means to be practical, and what a great thing it is. It means to be controlled in your doings by the consideration of ends yet unattained. The practical man is never distracted by things, or aspects of things, which have no bearing on his purpose, but, ever seizing the significant, he moves with a single mind and a single emotion toward the goal. And even when the goal is achieved you will hardly see him pause to rejoice in it; he is already on his way to another achievement. For that is the irony of his nature. His joy is not in any conquest or destination, but his joy is in going toward it. To which joy he adds the pleasure of being praised as a practical man, and a man who will arrive.

In a more usual sense, perhaps, a practical man is a man occupied with attaining certain ends that people consider important. He must stick pretty close to the business of feeding and preserving life. Nourishment and

shelter, money-making, maintaining respectability, and if possible a family—these are the things that give its common meaning to the word "practical." An acute regard for such features of the scenery, and the universe, as contribute or can be made to contribute to these ends, and a systematic neglect of all other features, are the traits of mind which this word popularly suggests. And it is because of the vital importance of these things to almost all people that the word "practical" is a eulogy and is able to be so scornful of the word "poetic."

"It is an earnest thing to be alive in this world. With competition, with war, with disease and poverty and oppression, misfortune and death on-coming, who but fools will give serious attention to what is not significant to the business?"

"Yes—but what is the *use* of being alive in the world, if life is so oppressive in its moral character that we must always be busy getting somewhere, and never simply realizing where we are? What were the value of your eternal achieving, if we were not here on our holiday to appreciate, among other things, some of the things you have achieved?"

Thus, if we could discover a purely poetic and a purely practical person, might they reason together. But we can discover nothing so satisfactory to our definitions, and therefore let us conclude the discussion of the difference between them. It has led us to our own end—a clearer understanding of the nature of poetic people, and of all people when they are in a poetic mood. They are lovers of the qualities of things. They are not engaged, as the learned say that all life is, in becoming adjusted to an environment, but they are engaged in becoming acquainted with it. They are possessed by the impulse to realize, an impulse as deep, and arbitrary,

and unexplained as that "will to live" which lies at the bottom of all the explanations. It seems but the manifestation, indeed, of that will itself in a concrete and positive form. It is a wish to experience life and the world. That is the essence of the poetic temper.[1]

Children are poetic. They love to feel of things. I suppose it is necessary to their preservation that they should be, for by random exercise of their organs of feeling they develop them and make them fit for their practical function. But that is not the chief reason why they are poetic; the chief reason is that they are not practical. They have not yet felt the necessity, or got addicted to the trick, of formulating a purpose and then achieving it. Therefore, this naïve impulse of nature, the impulse toward realization, is free in them. Moreover, it is easy of satisfaction. It is easy for children to taste the qualities of experience, because experience is new, and its qualities are but loosely bound together into what we call "things." Each is concrete, particular, unique, and without an habitual use.

Babies have no thought, we may say, but to feel after and find the world, bringing it so far as possible to their mouths where it becomes poignant. They become absorbed in friendship with the water they bathe in. The

[1] There is a poetic attitude to the practical life, and no poet is complete without it. It is expressed in these words of Peter Kropotkin:

"Struggle! To struggle is to live, and the fiercer the struggle the intenser the life."

But it is not that attitude which keeps the majority struggling, or keeps any man incessantly struggling. They are not concerned to receive the experience of struggle, but they are concerned to achieve their ends. This general tendency to achieve, to adjust—a primary impulse of life—is set off against the tendency to receive, to realize—a different and also, I believe, a primary impulse of life. Like all things in the world these impulses are rarely found pure, but they can be analyzed out and isolated for purposes of understanding.

crumple noise of papers puts them in ecstasy, and later all smells and sounds, brightness, and color, and form, and motion, delight them. We can see them discover light by putting their hands before their eyes and taking them away quickly, and again, at a later age, discover sound by stopping their ears and opening them again.

Who does not remember in his own childhood testing the flavors of things—of words, perhaps, saying them over and over until he had defeated his own wish, for they became pulpy and ridiculous in his mouth? Anything which invades the sense like cinnamon, or sorrel, or neat flowers, or birds' eggs, or a nut, or a horn, is an object of peculiar affection. It is customary in books about children to say that they care little for the actual qualities of an object, and are able to deal with it as though it were anything that they choose to imagine. But I think only the positive part of this statement is true. Undoubtedly their imaginations are active in more various directions, and they draw the distinction between the real and the ideal in perception less clearly than grown-up people do. But the most pronounced characteristic of children is that they are perfectly free to feel the intrinsic qualities of things as they merely are. What we call objects are for the most part practically determined coördinations of qualities. And what we call the *actual* quality of an object is usually the quality which indicates its vital use. When we say actual, therefore, we really mean practical. But so far as actuality from the standpoint of the things is concerned, the children come nearer to it, and care more about it, than we do. To us a derby hat is for covering the head, and that is about all it is; but to them it is hard, smooth, hollow, deep, funny, and may be named after the mixing-bowl and employed accordingly. And so it is with all things.

The child loves a gem with its pure and serene ray, as the poet loves it, for its own sake.

Nor is it only such qualities as may be said to give pleasure that he seeks, unless pleasure be defined as seeking, for he wants all experience. He wants all that he can stand. He is exploring the whole world of sense, and not rarely upsets his stomach and his entire system in a zest for the reception of sensations that are instinctively abhorred. Two children of our neighborhood will wear to their graves the brand of a red-hot scarf-pin as a testimony to that first love of experience. They did not want torture, I suppose, but they wanted to see what it is to be tortured. And so it was in varying degrees with us all. It seems to me, when I look back, as if we were forever out behind the barn finding out what something or other was "like."

It has been a vast problem for those concerned with æsthetic and other theories, why people love tragedy when they are not in it. But if their theories would only allow that these organisms of ours, which have been gnashing and struggling together God knows what billions of years for a chance to live, have really an interest in living, there could be no problem. The problem is, seeing this wild zest for life, and life so tragic—the problem is, why people do not love tragedy when they are in it. And in truth they do. From the pure sweetness of early romantic sorrow to the last bitter comfort of an old man bereft, who mutters to his soul, "This is a part of the full experience of a man!"—from first to last, up to the cannon's mouth, and down to the midnight grave, the poetic impulse survives. We love to taste life to the full.

In energetic but idle hours it survives joyfully. And in youth these were the predominant hours. At all

times we were ready for exuberant realization. We were not indifferent to the morning. We did not wake at the greeting of a last night's proposition in commerce or knowledge, but at the smile of the sun. The stuff of our thoughts was not sentences and numbers, but grass and apples and brown honey. Such excellent objects parading before our minds in a thousand combinations and colors left us no time to develop these general conclusions with which we are now filled. We could not banish our prairie thoughts from the schoolroom, though they liked it as little as we, and the hour of recess was the hour of life. And in the hours of life how greedy we were! Every sense was open with indiscriminate material flowing in. Our eyes trained for every seeing, our ears catching the first murmur of a new experience, we ran after the world in our eagerness, not to learn about it, but to taste the flavor of its being.

"Oh, the wild joys of living! the leaping from rock up to rock,
The strong rending of boughs from the fir-tree, the cool silver shock
Of the plunge in a pool's living water, the hunt of the bear,
And the sultriness showing the lion is couched in his lair.
And the meal, the rich dates yellowed over with gold dust divine,
And the locust-flesh steeped in the pitcher, the full draught of wine,
And the sleep in the dried river-channel where bulrushes tell
That the water was wont to go warbling so softly and well.
How good is man's life, the mere living! how fit to employ
All the heart and the soul and the senses forever in joy!"

This agility and fervor of realization extends early to the exercises of all the senses. And then as we grow a little older it comes inward, and we tremble to catch our own emotions on the wing. Fear, for instance, is a

being of intense fascination, and even so impelling a power as the instinct of self-preservation is suspended by the poetic impulse—suspended in order that its own very nature may be experienced in feeling. Can you not remember the keen edge of a venture into the barn-yard, a tumultuous dash across to the corn-crib which offered a refuge impregnable to those mild-mannered cows? Anger is a moderate pleasure to most healthy persons, but in youth it is a thing to thirst after and brag of. It is life itself. Mulishness is an engaging state of being. Cruelty and mercy have often the same original charm.

I remember discovering insolence with exactly the same happy spirit of gratification with which I see babies discover light. I was profoundly interested in Nancy Hanks, who had broken the world's record by trotting a mile in 2.04. I believe that I *was* Nancy Hanks most of the time, and anybody who wanted to converse with me or put me in a good-humor would begin upon that topic. But at last I became aware that I could do something quite different from being gratified by all their talk, and I was carried away by the discovery. My opportunity came during supper, at the gracious hands of a maiden aunt:

"Do you know who Nancy Hanks was named after?"

"No," I shouted, "I don't know and I don't care a *darn*—see?"

My memory of the punishment which followed, and how I became aware that there are limits to profitable exploration in such fields, is dim, but of the excited pleasure of the adventure, and my underlying friendliness toward the old lady throughout I am quite certain.

They are great days when we first discern these powerful creatures in us, unnamed and meaningless monsters to challenge forth. Ghost-terror and dizziness and sick-

ness at the sight of blood are among them. Imagine the mind of a young man who knows that there lies a pile of corpses the other side of a smoldering factory wall, and he both hastens to them and flees away from them, until finally this lust after the intense conquers, and he goes and gazes his fill. Do not call that morbid, but an act of exuberant vitality. For there is high-spiritedness in those that are young, not for sensation only, but for emotion. And this too they carry with them, some more and some less, throughout life. Rancor and magnanimity, lust and romance, rapture and even melancholy —drink them to the dregs, for they are what it is to be.

"No, no! go not to Lethe——"

It is not only things of the sense and body that a child loves for their own sake, but at a certain age he learns to watch with wonder the paintings of his mind. When he is condemned into his crib, and has to face the loss of the whole lovely world in sleep, then this is the last resource. As long as God lets him, he will devote his somnolescent power to sensuous memory or anticipation, or just the circus-antics of grotesque and vivid-colored creatures that dance in before him unbidden, uncreated, unexplained. Even if sometimes he does honestly try to think, he finds that he cannot very long cling to the meaning of his thought, because he is all curious to examine those garments of imagery that it wears.

To most adults, I suppose, it is a bare mechanical or rational process to count from one to a hundred; but to an alert child it hardly ever is. It is a winding and bending over a plain, over a prairie, a slow climb, a drip-drip, or an odd march of marionettes, or perhaps it is just the queer sound of the words at his ear. At any rate, the engrossing thing is to estimate the unique char-

acter of the process and of each member in it. Eight is a jolly fat man. Six is sitting down. Some people say that they never had any of these pleasures, that they have no mind's eye at all. They cannot see six sit down. Let them try to comfort themselves with the idea that they are more scientific than the rest, not having vivid images to confuse their meanings in the serious business of reaching a conclusion. They are like the people on the ferry-boat who stay downstairs where there are few distractions and they can be perfectly sure to get across. Luckier than they are the people who can enjoy the scenery of speculation, who bring with them out of childhood a clear and spirited fancy.

> "——Great God! I'd rather be
> A Pagan suckled in a creed outworn;
> So might I, standing on this pleasant lea,
> Have glimpses that would make me less forlorn;
> Have sight of Proteus rising from the sea;
> Or hear old Triton blow his wreathèd horn."

The final appearance of the poetic impulse, its intellectual appearance, is also at its height in youth. It is well known that at a certain period, if they are healthy and have a little self-dependence, young persons fall in love with all kinds of unusual ideas. They come forward with an amazing belief, a wise or foolish theory, which they attach to for its own sake, and not out of regard for its practical or real consequence. They take a taste of atheism, anarchism, asceticism, Hindoo philosophy, pessimism, Christianity, or anything that offers a good flavor of radical faith. This is only the same zest for experience. And it will need but a glance at life and literature to prove that such attachment to ideas, with small regard for their meaning in conduct, is not con-

fined to the young. It is a poetic pleasure that people bring with them perhaps farther than any of the others. For most of these pleasures, and especially the more simple and innocent, they soon leave behind, as though it were somehow unworthy to be childlike and love things for their own sake.

We have a superstition prevailing in our homes that the first thing to do upon the appearance of a child is to bring it up. And we see children brought up in the utmost haste by persons who have purchased their own maturity at a cost of all native and fresh joy in anything available. But could we only realize how far the youthful pleasure in every poignant realization is above the accidents of fortune, we should take as great pains to preserve that as to erect the man in our offspring. We should ourselves long to be born again and maintain for the future a more equable union of the practical and poetic in our character.

That such a union is attainable the lives of the greatest show. It is possible to keep throughout a life not wholly disordered, or idle, or cast loose from the general drift of achievement, a spirit fresh to the world. The thought brings us back to Æschylus, a man of heroic proportions who achieved, in an age of turmoil and war, a life filled wonderfully with realizations that were final, the fruit of evolution, and yet not wanting the excellence of great action directed toward a further end. With the participation of that poetic hero in the campaign of defense against the Persians, and in the battles of Salamis and Marathon, it seems as if Nature had indeed achieved her aim. There experience was at its height, but purpose was unshaken. The little library and piazza poets and esteemers of poetry in these days of art will do well to remember the great Greek who died the most renowned

literary genius of his age, but had carved upon his proud tomb only this boast, that "The grove of Marathon could bear witness to his good soldierhood, and the long-haired Mede who felt it."

It would be foolish indeed to question whether or not the poetic are capable of purposeful achievement, and the practical capable of intense experience, for we are all, except those lost in apathy, in some degree both poetic and practical. But the example of the hero proves that it is possible for a man who can think clearly and command the differences that lie within him to be both poetic and practical in a high degree.

If we could but free our minds from a contamination with certain modern people who teach themselves that they are presided over by a pretty demon called an Artistic Temperament, we should not only cease cherishing by suggestion the tickle-brain condition into which they decay, but we should have for ourselves a sounder estimate of the place and dignity of the poetic. It is not an attribute of special, exotic, or disordered types, but a universal quality of our nature. No live man is without an arbitrary passion for some experience. Indeed, the defect of many of those most scornful of poetry is not that they are strong in the practical life, but that the attachment to some single state of being has got the better of them. There are fifty thousand morphine-takers in Paris, and all over the face of the earth how many million chewers, and breathers, and swallowers of what, far from being of practical value, is both costly and deleterious, bearing unconscious witness to the poetry of human nature.

The greatly poetic differ from them only in the healthy variety of their loves, prevailing everywhere and always. They are those who live variously as well as vividly in

the present. This alone distinguishes them from the millions. This alone distinguishes them from all those excluded by our experiment at the beginning, who confine their enjoyment to smoke while they are crossing the river. They are not without realization. But it is only the childlike and the poetic who make the innumerable intimate acquaintances that are to be made, who welcome all living qualities and perfect them, and finally, perhaps, in a supreme moment of morning sunshine and mist over the city, realize what we may call the essence of crossing a ferry. Their breast thrills, and their eyes drink with rapture the million moving and dancing details of that pageant of life—

"——the white sails of schooners and sloops,—the ships at anchor,
The sailors at work in the rigging, or out astride the spars,
The round masts, the swinging motion of the hulls, the slender serpentine pennants,
The large and small steamers in motion, the pilots in their pilot-houses,
The white wake left by the passage, the quick tremulous whirl of the wheels,
The flags of all nations, the falling of them at sunset,
The scallop-edged waves in the twilight, the ladled cups, the frolicsome crests and glistening,
The stretch afar growing dimmer and dimmer, the gray walls of the granite storehouses by the docks,
On the river the shadowy group, the big steam-tug closely flank'd on each side by the barges—the hay-boat, the belated lighter,
On the neighboring shore the fires from the foundry chimneys burning high and glaringly into the night,
Casting their flicker of black, contrasted with wild red and yellow light, over the tops of houses, and down into the clefts of streets."

WHAT IS THOUGHT?[1]

John Dewey

John Dewey was born at Burlington, Vermont, October 20, 1859. The Burlington High School, the University of Vermont, and Johns Hopkins University provided his academic education. He began teaching philosophy at the University of Michigan in 1884 and continued there until 1894, with the exception of one year at the University of Minnesota. In 1894 he became professor of philosophy at the University of Chicago, and later also director of the School of Education. In 1904 he resigned at Chicago, and soon after accepted a professorship of philosophy at Columbia University. He is a member of several scientific and other learned societies, and a contributor to many philosophical, psychological, and educational magazines. Since 1885 he has published at least a dozen books, chiefly in the realms of philosophy and education. His *Psychology* (1886) is one of the most penetrating of all studies in the subject and has been one of the leading texts from the day of its publication; if superseded at all in use, it has been because of the vogue of the present day for the laboratory method in psychological studies. Dr. Dewey stands at the forefront among the real "intellectuals" of this country. His influence upon the mind of America has been incalculably great. This influence has been employed chiefly in the direction of thought in ethical, philosophical, and educational movements; but he "can write," and therefore he has been a power reaching far beyond the traditional walls of institutionalism. While he has differed widely in methods of thinking and in style of writing from William James, yet no other thinker in America is comparable with John Dewey in his chosen fields.

No words are oftener on our lips than *thinking* and *thought*. So profuse and varied, indeed, is our use of these words that it is not easy to define just what we mean by them. The aim of this chapter is to find a single consistent meaning. Assistance may be had by considering some typical ways in which the terms are employed.

[1] From *How We Think*—reprinted by permission of the author and of the publishers, D. C. Heath & Company.

In the first place *thought* is used broadly, not to say loosely. Everything that comes to mind, that "goes through our heads," is called a thought. To think of a thing is just to be conscious of it in any way whatsoever. Second, the term is restricted by excluding whatever is directly presented; we think (or think of) only such things as we do not directly see, hear, smell, or taste. Then, third, the meaning is further limited to beliefs that rest upon some kind of evidence or testimony. Of this third type, two kinds—or, rather, two degrees—must be discriminated. In some cases, a belief is accepted with slight or almost no attempt to state the grounds that support it. In other cases, the ground or basis for a belief is deliberately sought and its adequacy to support the belief examined. This process is called reflective thought; it alone is truly educative in value, and it forms, accordingly, the principal subject of this volume. We shall now briefly describe each of the four senses.

In its loosest sense, thinking signifies everything that, as we say, is "in our heads" or that "goes through our minds." He who offers "a penny for your thoughts" does not expect to drive any great bargain. In calling the objects of his demand *thoughts,* he does not intend to ascribe to them dignity, consecutiveness, or truth. Any idle fancy, trivial recollection, or flitting impression will satisfy his demand. Daydreaming, building of castles in the air, that loose flux of casual and disconnected material that floats through our minds in relaxed moments are, in this random sense, *thinking.* More of our waking life than we should care to admit, even to ourselves, is likely to be whiled away in this inconsequential trifling with idle fancy and unsubstantial hope.

In this sense, silly folk and dullards *think.* The story

is told of a man in slight repute for intelligence, who, desiring to be chosen selectman in his New England town, addressed a knot of neighbors in this wise: "I hear you don't believe I know enough to hold office. I wish you to understand that I am thinking about something or other most of the time." Now reflective thought is like this random coursing of things through the mind in that it consists of a succession of things thought of; but it is unlike, in that the mere chance occurrence of any chance "something or other" in an irregular sequence does not suffice. Reflection involves not simply a sequence of ideas, but a *con*sequence—a consecutive ordering in such a way that each determines the next as its proper outcome, while each in turn leans back on its predecessors. The successive portions of the reflective thought grow out of one another and support one another; they do not come and go in a medley. Each phase is a step from something to something—technically speaking, it is a term of thought. Each term leaves a deposit which is utilized in the next term. The stream or flow becomes a train, chain, or thread.

Even when thinking is used in a broad sense, it is usually restricted to matters not directly perceived: to what we do not see, smell, hear, or touch. We ask the man telling a story if he saw a certain incident happen, and his reply may be, "No, I only thought of it." A note of invention, as distinct from faithful record of observation, is present. Most important in this class are successions of imaginative incidents and episodes which, having a certain coherence, hanging together on a continuous thread, lie between kaleidoscopic flights of fancy and considerations deliberately employed to establish a conclusion. The imaginative stories poured forth by children possess all degrees of internal con-

gruity; some are disjointed, some are articulated. When connected, they stimulate reflective thought; indeed, they usually occur in minds of logical capacity. These imaginative enterprises often precede thinking of the close-knit type and prepare the way for it. But *they do not aim at knowledge, at belief about facts or in truths;* and thereby they are marked off from reflective thought even when they most resemble it. Those who express such thoughts do not expect credence, but rather credit for a well-constructed plot or a well-arranged climax. They produce good stories, not—unless by chance—knowledge. Such thoughts are an efflorescence of feeling; the enhancement of a mood or sentiment is their aim; congruity of emotion, their binding tie.

In its next sense, thought denotes belief resting upon some basis, that is, real or supposed knowledge going beyond what is directly present. It is marked by *acceptance or rejection of something as reasonably probable or improbable.* This phase of thought, however, includes two such distinct types of belief that, even though their difference is strictly one of degree, not of kind, it becomes practically important to consider them separately. Some beliefs are accepted when their grounds have not themselves been considered, others are accepted because their grounds have been examined.

When we say, "Men used to think the world was flat," or, "I thought we went by the house," we express belief; something is accepted, held to, acquiesced in, or affirmed. But such thoughts may mean a supposition accepted without reference to its real grounds. These may be adequate, they may not; but their value with reference to the support they afford the belief has not been considered.

Such thoughts grow up unconsciously and without

reference to the attainment of correct belief. They are picked up—we know not how. From obscure sources and by unnoticed channels they insinuate themselves into acceptance and become unconsciously a part of our mental furniture. Tradition, instruction, imitation—all of which depend upon authority in some form, or appeal to our own advantage, or fall in with a strong passion—are responsible for them. Such thoughts are prejudices, that is, prejudgments, not judgments proper that rest upon a survey of evidence.

Thoughts that result in belief have an importance attached to them which leads to reflective thought, to conscious inquiry into the nature, conditions, and bearings of the belief. To *think* of whales and camels in the clouds is to entertain ourselves with fancies, terminable at our pleasure, which do not lead to any belief in particular. But to think of the world as flat is to ascribe a quality to a real thing as its real property. This conclusion denotes a connection among things and hence is not, like imaginative thought, plastic to our mood. Belief in the world's flatness commits him who holds it to thinking in certain specific ways of other objects, such as the heavenly bodies, antipodes, the possibility of navigation. It prescribes to him actions in accordance with his conception of these objects.

The consequences of a belief upon other beliefs and upon behavior may be so important, then, that men are forced to consider the grounds or reasons of their belief and its logical consequences. This means reflective thought—thought in its eulogistic and emphatic sense.

Men *thought* the world was flat until Columbus *thought* it to be round. The earlier thought was a belief held because men had not the energy or the courage to question what those about them accepted and taught,

especially as it was suggested and seemingly confirmed by obvious sensible facts. The thought of Columbus was a *reasoned conclusion.* It marked the close of study into facts, of scrutiny and revision of evidence, of working out the implications of various hypotheses, and of comparing these theoretical results with one another and with known facts. Because Columbus did not accept unhesitatingly the current traditional theory, because he doubted and inquired, he arrived at his thought. Skeptical of what, from long habit, seemed most certain, and credulous of what seemed impossible, he went on thinking until he could produce evidence for both his confidence and his disbelief. Even if his conclusion had finally turned out wrong, it would have been a different sort of belief from those it antagonized, because it was reached by a different method. *Active, persistent, and careful consideration of any belief or supposed form of knowledge in the light of the grounds that support it, and the further conclusions to which it tends,* constitutes reflective thought. Any one of the first three kinds of thought may elicit this type; but once begun, it is a conscious and voluntary effort to establish belief upon a firm basis of reasons.

WOMAN ENTHRONED[1]

Agnes Repplier

Few present-day writers have confined themselves so religiously to one type of writing as has Agnes Repplier. Such devotion has its compensations, however, for few Americans indeed can rival Miss Repplier as an essayist, both as far as the quantity and the quality of the output are concerned. No less than fifteen volumes of essays from her pen have been published. There are scarcely any readers of high-class magazines who are not familiar with the thought-provoking articles of this remarkable woman. Though today she is a woman of mature years, her birth date being April 1, 1858, her point of view is modern. The freshness and the vigor which marked her first essays are characteristics of her writings today, but added to them are a serene philosophy and a degree of conviction that come with living broadly and deeply in the world of affairs. An alert observer, a keen thinker, a woman of the world in the finest sense of that phrase, Miss Repplier has proved herself competent to discuss men and issues of wide importance as well as to deal with abstract themes. She has courage as well as ability. Her style does not lack sparkle because it is incisive, nor grace because it challenges attention by its force. *Woman Enthroned* gives evidence of her freedom from sentimentality as well as conventionality. Though she cannot be accused of being disloyal to her sex, she shows clearly that she entertains no illusions in regard to it. This characteristic of facing facts squarely is what makes her appeal to masculine minds. She voices her opinions, however, without losing any of the desirable sense of delicacy that belongs to womankind.

The Michigan magistrate who gave orders that a stalwart male angel presiding over the gateway of a cemetery should be recast in feminine mold may have been an erring theologian and a doubtful art-critic, but that he was a sound-hearted American no one can deny. He was not thinking of Azrael the mighty who had garnered

[1] From *Points of Friction,* by permission of and special arrangement with the Houghton Mifflin Company.

that little harvest of death, or of Michael, great leader of the "fighting seraphim," whose blade

> "Smote and felled
> Squadrons at once;"

or of Gabriel the messenger. Holy Writ was as remote from his mental vision as was *Paradise Lost*. He was thinking very properly of the "angel in the house," and this feminine ideal was affronted by the robust outlines, no less than by the robust virtues, associated with the heavenly host. Cowley's soothing compromise, which was designed as a compliment to a lady, and which, instead of unsexing angels, endowed them with a double line of potencies,—

> "They are than Man more strong, and more than Woman sweet,—"

is not easily expressed in art. The very gallant Michigan gentleman simplified the situation by eliminating the masculine element. He registered his profession of faith in the perfectibility of women.

It is awkward to be relegated to the angelic class, and to feel that one does not fit. Intelligent feminists sometimes say that chivalry—that inextinguishable point of view which has for centuries survived its own death-notices—is more disheartening than contempt. Chivalry is essentially protective. It is rooted in the consciousness of superior strength. It is expansively generous and scrimpingly just. It will not assure to women a fair field and no favors, which is the salvation of all humanity; but it will protect them from the consequences of their own deeds, and that way lies perdition.

Down through the ages we see the working of this will. Rome denied to women all civic rights, but allowed

them many privileges. They were not permitted to make any legal contract. They were not permitted to bequeath their own fortunes, or—ordinarily—to give testimony in court. But they might plead ignorance of the law, "as a ground for dissolving an obligation," which, if often convenient, was always demoralizing. Being somewhat contemptuously absolved from the oath of allegiance in the Middle Ages, they were as a consequence immune from outlawry. On the other hand, the severity with which they were punished for certain crimes which were presumed to come easy to them—poisoning, husband-murder, witchcraft (King Jamie was not the only wise-acre who marveled that there should be twenty witches to one warlock)—is evidence of fear on the legislators' part. The oldest laws, the oldest axioms which antedate all laws, betray this uneasy sense of insecurity. "Day and night must women be held by their protectors in a state of dependence," says Manu, the Hindu Noah, who took no female with him in his miraculously preserved boat, but was content with his own safety, and trusted the continuance of the race to the care and ingenuity of the gods.

In our day, and in our country, women gained their rights (I use the word "rights" advisedly, because, though its definition be disputed, every one knows what it implies) after a prolonged, but not embittered struggle. Certain states moved so slowly that they were overtaken by a federal amendment. Even with the franchise to back them, American women have a hard time making their way in the professions, though a great deal of courtesy is shown them by professional men. They have a hard time making their way in trades, where the unions block their progress. They have a very small share of political patronage, and few good positions on the civil

lists. Whether the best interests of the country will be advanced or retarded by a complete recognition of their claims—which implies giving them an even chance with men—is a point on which no one can speak with authority. The absence of data leaves room only for surmise. Women are striving to gain this "even chance" for their own sakes, which is lawful and reasonable. Their public utterances, it is true, dwell pointedly on the regeneration of the world. This also is lawful and reasonable. Public utterances have always dwelt on the regeneration of the world, since the apple was eaten and Paradise closed its gates.

Meanwhile American chivalry, a strong article and equal to anything Europe ever produced, clings passionately and persistently to its inward vision. Ellen Key speaks casually of "the vices which men call woman's nature." If Swedish gentlemen permit themselves this form of speech, it finds no echo in our loyal land. Two things an American hates to do: hold a woman accountable for her misdeeds, and punish her accordingly. When Governor Craig of North Carolina set aside the death-sentence which had been passed upon a murderess and committed her to prison for life, he gave to the public this plain and comprehensive statement: "There is no escape from the conclusion that Ida Bell Warren is guilty of murder, deliberate and premeditated. Germany executed the woman spy; England did not. The action of the military governor of Belgium was condemned by the conscience of the world. The killing of this woman would send a shiver through North Carolina."

Apart from the fact that Edith Cavell was not a spy, and that her offense was one which has seldom in the world's history been so cruelly punished, Governor

Craig's words deserve attention. He explicitly exempted a woman, because she was a woman, from the penalty which would have been incurred by a man. Incidentally he was compelled to commute the death-sentence of her confederate, as it was hardly possible to send the murderous wife to prison, and her murderous accomplice to the chair. That the execution of Mrs. Warren would have sent a "shiver" through North Carolina is doubtless true. The Governor had received countless letters and telegrams protesting against the infliction of the death-penalty on a woman.

One of the reasons which has been urged for the total abolition of this penalty is the reluctance of juries to convict women of crimes punishable by death. The number of wives who murder their husbands, and of girls who murder their lovers, is a menace to society. Our sympathetic tolerance of these *crimes passionnés,* the sensational scenes in court, and the prompt acquittals which follow are a menace to law and justice. Better that their perpetrators should be sent to prison and suffer a few years of corrective discipline, until soft-hearted sentimentalists circulate petitions and secure their pardon and release.

The right to be judged as men are judged is perhaps the only form of equality which feminists fail to demand. Their attitude to their own *errata* is well expressed in the solemn warning addressed by Mr. Louis Untermeyer's Eve to the Almighty,

> "Pause, God, and ponder, ere Thou judgest me!"

The right to be punished is not, and has never been, a popular prerogative with either sex. There was, indeed, a London baker who was sentenced in the year 1816 to

be whipped and imprisoned for vagabondage. He served his term; but, whether from clemency or from oversight, the whipping was never administered. When released, he promptly brought action against the prison authorities because he had not been whipped, "according to the statute," and he won his case. Whether or not the whipping went with the verdict is not stated; but it was a curious joke to play with the grim realities of British law.

American women are no such sticklers for a code. They acquiesce in their frequent immunity from punishment, and are correspondingly, and very naturally, indignant when they find themselves no longer immune. There was a pathetic ring in the explanation offered some years ago by Mayor Harrison of Chicago, whose policemen were accused of brutality to female strikers and pickets. "When the women do anything in violation of the law," said the Mayor to a delegation of citizens, "the police arrest them. And then, instead of going along quietly as men prisoners would, the women sit down on the sidewalks. What else can the policemen do but lift them up?"

If men "go along quietly," it is because custom, not choice, has bowed their necks to the yoke of order and equity. They break the law without being prepared to defy it. The lawlessness of women may be due as much to their long exclusion from citizenship,

"Some reverence for the laws ourselves have made."

as to the lenity shown them by men—a lenity which they stand ever ready to abuse. We have only to imagine what would have happened to a group of men who had chosen to air a grievance by picketing the White House,

the speed with which they would have been arrested, fined, dispersed, and forgotten, to realize the nature of the tolerance granted to women. For months these female pickets were unmolested. Money was subscribed to purchase for them umbrellas and overshoes. The President, whom they were affronting, sent them out coffee on cold mornings. It was only when their utterances became treasonable, when they undertook to assure our Russian visitors that Mr. Wilson and Mr. Root were deceiving Russia, and to entreat these puzzled foreigners to help them free our nation, that their sport was suppressed, and they became liable to arrest and imprisonment.

Much censure was passed upon the unreasonable violence of these women. The great body of American suffragists repudiated their action, and the anti-suffragists used them to point stern morals and adorn vivacious tales. But was it quite fair to permit them in the beginning a liberty which would not have been accorded to men, and which led inevitably to license? Were they not treated as parents sometimes treat children, allowing them to use bad language because "if you pay no attention to them, they will stop it of their own accord," and then, when they do not stop it, punishing them for misbehaving before company? When a sympathetic gentleman wrote to a not very sympathetic paper to say that the second Liberty Loan would be more popular if Washington would "call off the dogs of war on women," he turned a flashlight upon the fathomless gulf with which sentimentalism has divided the sexes. No one dreams of calling policemen and magistrates "dogs of war" because they arrest and punish men for disturbing the peace. If men claim the privileges of citizenship, they are permitted to suffer its penalties.

A few years before the war a rage for compiling useless statistics swept over Europe and the United States. When it was at its height, some active minds bethought them that children might be made to bear their part in the guidance of the human race. Accordingly a series of questions—some sensible and some foolish—were put to English, German, and American school children, and their enlightening answers were given to the world. One of these questions read: "Would you rather be a man or a woman, and why?" Naturally this query was of concern only to little girls. No sane educator would ask it of a boy. German pedagogues struck it off the list. They said that to ask a child, "Would you rather be something you must be, or something you cannot possibly be?" was both foolish and useless. Interrogations concerning choice were of value only when the will was a determining factor.

No such logical inference chilled the examiners' zeal in this inquisitive land. The question was asked and was answered. We discovered, as a result, that a great many little American girls (a minority, to be sure, but a respectable minority) were well content with their sex, not because it had its duties and dignities, its pleasures and exemptions, but because they plainly considered that they were superior to little American boys, and were destined, when grown up, to be superior to American men. One small New England maiden wrote that she would rather be a woman because "Women are always better than men in morals." Another, because "Women are of more use in the world." A third, because "Women learn things quicker than men, and have more intelligence." And so on through varying degrees of self-sufficiency.

These little girls, who had no need to echo the Scotch-

man's prayer, "Lord, gie us a gude conceit o' ourselves!" were old maids in the making. They had stamped upon them in their tender childhood the hall-mark of the American spinster. "The most ordinary cause of a single life," says Bacon, "is liberty, especially in certain self-pleasing and humorous minds." But it is reserved for the American woman to remain unmarried because she feels herself too valuable to be entrusted to a husband's keeping. Would it be possible in any country save our own for a lady to write to a periodical, explaining "Why I Am an Old Maid," and be paid coin of the realm for the explanation? Would it be possible in any other country to hear such a question as "Should the Gifted Woman Marry?" seriously asked, and seriously answered? Would it be possible for any sane and thoughtful woman who was not an American to consider even the remote possibility of our spinsters becoming a detached class, who shall form "the intellectual and economic élite of the sex, leaving marriage and maternity to the less developed woman?" What has become of the belief, as old as civilization, that marriage and maternity are developing processes, forcing into flower a woman's latent faculties; and that the less-developed woman is inevitably the woman who has escaped this keen and powerful stimulus? "Never," said Edmond de Goncourt, "has a virgin, young or old, produced a work of art." One makes allowance for the Latin point of view. And it is possible that M. De Goncourt never read *Emma.*

There is a formidable lack of humor in the somewhat contemptuous attitude of women, whose capabilities have not yet been tested, toward men who stand responsible for the failures of the world. It denotes, at home and abroad, a density not far removed from dullness. In

Mr. St. John Ervine's depressing little drama, "Mixed Marriage," which the Dublin actors played in New York some years ago, an old woman, presumed to be witty and wise, said to her son's betrothed: "Sure, I believe the Lord made Eve when He saw that Adam could not take care of himself"; and the remark reflected painfully upon the absence of that humorous sense which we used to think was the birthright of Irishmen. The too obvious retort, which nobody uttered, but which must have occurred to everybody's mind, was that if Eve had been designed as a care-taker, she had made a shining failure of her job.

That astute Oriental, Sir Rabindranath Tagore, manifested a wisdom beyond all praise in his recognition of American standards when addressing American audiences. As the hour for his departure drew nigh, he was asked to write, and did write, a "Parting Wish for the Women of America," giving graceful expression to the sentiments he knew he was expected to feel. The skill with which he modified and popularized an alien point of view revealed the seasoned lecturer. He told his readers that "God has sent woman to love the world," and to build up a "spiritual civilization." He condoled with them because they were "passing through great sufferings in this callous age." His heart bled for them, seeing that their hearts "are broken every day, and victims are snatched from their arms to be thrown under the car of material progress." The Occidental sentiment which regards man simply as an offspring and a fatherless offspring at that (no woman, says Olive Schreiner, could look upon a battle-field without thinking, "So many mothers' sons!") came as naturally to Sir Rabindranath as if he had been to the manner born. He was content to see the passion and pain, the sorrow and heroism of

men, as reflections mirrored in a woman's soul. The ingenious gentlemen who dramatize Biblical narratives for the American stage, and who are hampered at every step by the obtrusive masculinity of the East, might find a sympathetic supporter in this accomplished and accommodating Hindu.

The story of Joseph and his Brethren, for example, is perhaps the best tale ever told the world, a tale of adventure on a heroic scale, with conflicting human emotions to give it poignancy and power. It deals with pastoral simplicities, with the splendors of court, and with the "high finance" which turned a free landholding people into tenantry of the crown. It is a story of men, the only lady introduced being a disedifying *dea ex machina,* whose popularity in Italian art has perhaps blinded us to the brevity of her Biblical rôle. But when this most dramatic narrative was cast into dramatic form, Joseph's splendid loyalty to his master, his cold and vigorous chastity were nullified by giving him an Egyptian sweetheart. Lawful marriage with this young lady being his sole solicitude, the advances of Potiphar's wife were less of a temptation than an intrusion. The keynote of the noble old tale was destroyed to assure to woman her proper place as the guardian of man's integrity.

Still more radical was the treatment accorded to the parable of the "Prodigal Son," which was expanded into a pageant play and acted with a hardy realism permitted only to the strictly ethical drama. The scriptural setting of the story was preserved, but its patriarchal character was sacrificed to modern sentiment which refuses to be interested in the relation of father and son. Therefore, we beheld the prodigal equipped with a mother and a trusting female cousin, who, between them, put the poor old gentleman out of commission, reducing him to his

proper level of purveyor-in-ordinary to the household. It was the prodigal's mother who bade her reluctant husband give their wilful son his portion. It was the prodigal's mother who watched for him from the housetop, and silenced the voice of censure. It was the prodigal's mother who welcomed his return, and persuaded father and brother to receive him into favor. The whole duty of man in that Syrian household was to obey the impelling word of woman, and bestow blessings and bags of gold according to her will.

The expansion of the maternal sentiment until it embraces, or seeks to embrace, humanity, is the vision of the emotional, as opposed to the intellectual, feminist. "The Mother State of which we dream" offers no attraction to many plain and practical workers and is a veritable nightmare to others. "Woman," writes an enthusiast in *The Forum,* "means to be, not simply the mother of the individual, but of society, of the State with its man-made institutions, of art and science, of religion and morals. All life, physical and spiritual, personal and social, needs to be mothered."

"Needs to be mothered!" When men proffer this welter of sentiment in the name of women, how is it possible to say convincingly that the girl student standing at the gates of knowledge is as humble-hearted as the boy; that she does not mean to mother medicine, or architecture, or biology, any more than the girl in the banker's office means to mother finance? Her hopes for the future are founded on the belief that fresh opportunities will meet a sure response; but she does not, if she be sane, measure her untried powers by any presumptive scale of valuation. She does not consider the advantages which will accrue to medicine, biology, or architecture by her entrance—as a woman—into any one

of these fields. Their need for her maternal ministration concerns her less than her need for the magnificent heritage they present.

It has been said many times that the craving for material profit is not instinctive in women. If it is not instinctive, it will be acquired, because every legitimate incentive has its place in the progress of the world. The demand that women shall be paid men's wages for men's work may represent a desire for justice rather than a desire for gain; but money fairly earned is sweet in the hand, and to the heart. An open field, an even start, no handicap, no favors, and the same goal for all. This is the worker's dream of paradise. Women have long known that lack of citizenship was an obstacle in their path. Self-love has prompted them to overrate their imposed, and underrate their inherent, disabilities. "Whenever you see a woman getting a high salary, make up your mind that she is giving twice the value received," writes an irritable correspondent to *The Survey;* and this pretension paralyzes effort. To be satisfied with ourselves is to be at the end of our usefulness.

M. Émile Faguet, that most radical and least sentimental of French feminists, would have opened wide to women every door of which man holds the key. He would have given them every legal right and burden which they are physically fitted to enjoy and to bear. He was as unvexed by doubts as he was uncheered by illusions. He had no more fear of the downfall of existing institutions than he had hope for the regeneration of the world. The equality of men and women, as he saw it, lay, not in their strength, but in their weakness; not in their intelligence, but in their stupidity; not in their virtues, but in their perversity. Yet there was no taint of pessimism in his rational refusal to be de-

ceived. No man saw more clearly, or recognized more justly, the art with which his countrywomen have cemented and upheld a social state at once flexible and orderly, enjoyable and inspiriting. That they have been the allies, and not the rulers, of men in building this fine fabric of civilization was also plain to his mind. Allies and equals he held them, but nothing more. *"La femme est parfaitement l'egale de l'homme, mais elle n'est que son egale."*

Naturally to such a man the attitude of Americans toward women was as unsympathetic as was the attitude of Dahomeyans. He did not condemn it (possibly he did not condemn the Dahomeyans, seeing that the civic and social ideals of France and Dahomey are in no wise comparable); but he explained with careful emphasis that the French woman, unlike her American sister, is not, and does not desire to be *"un objet sacro-saint."* The reverence for women in the United States he assumed to be a national trait, a sort of national institution among a proud and patriotic people. *"L'idolâtrie de la femme est une chose américaine par excellence."*

The superlative complacency of American women is due largely to the oratorical adulation of American men, an adulation that has no more substance than has the foam on beer. I have heard a candidate for office tell his female audience that men are weak and women are strong, that men are foolish and women are wise, that men are shallow and women are deep, that men are submissive tools whom women, the leaders of the race, must instruct to vote for him. He did not believe a word that he said, and his hearers did not believe that he believed it; yet the grossness of his flattery kept pace with the hypocrisy of his self-depreciation. The few men present wore an attitude of dejection not unlike that

of the little boy in *Punch* who has been told that he is made of

> "Snaps and snails,
> And puppy dogs' tails,"

and can "hardly believe it."

What Mr. Roosevelt called the "lunatic fringe" of every movement is painfully obtrusive in the great and noble movement which seeks fair play for women. The "full habit of speech" is never more regrettable than when the cause is so good that it needs but temperate championing. "Without the aid of women, England could not carry on this war," said Mr. Asquith in the second year of the great struggle—an obvious statement, no doubt, but simple, truthful, and worthy to be spoken. Why should the *New Republic* in an article bearing the singularly ill-mannered title, "Thank You For Nothing!" have heaped scorn upon these words? Why should its writer have made the angry assertion that the British Empire had been "deprived of two generations of women's leadership" because only a world's war could drill a new idea into a statesman's head? The war has drilled a great many new ideas into all our heads. Absence of brain matter could alone have prevented this infusion. But "leadership" is a large word. It is not what men are asking, and it is not what women are offering, even at this stage of the game. Partnership is as far as obligation on the one side and ambition on the other are prepared to go; and a clear understanding of this truth has accomplished great results.

Therefore, when we are told that the women of today are "giving their vitality to an anemic world," we wonder if the speaker has read a newspaper for the past half-dozen years. The passionate cruelty and the pas-

sionate heroism of men have soaked the earth with blood. Never, since it came from its Maker's hands, has it seen such shame and glory. There may be some who still believe that this blood would not have been spilled had women shared in the citizenship of nations; but the arguments they advance in support of an undemonstrable theory show a soothing ignorance of events.

"War will pass," says Olive Schreiner, "when intellectual culture and activity have made possible to the female an equal share in the control and government of modern national life." And why? Because "Arbitration and compensation will naturally occur to her as cheaper and simpler methods of bridging the gaps in national relationship."

Strange that this idea never "naturally" occurred to man! Strange that no delegate to The Hague should have perceived so straight a path to peace! Strange that when Germany struck her long-planned, well-prepared blow, this cheap and simple measure failed to stay her hand! War will pass when injustice passes. Never before, unless hope leaves the world.

That any civilized people should bar women from the practice of law is to the last degree absurd and unreasonable. There never can be an adequate cause for such an injurious exclusion. There is, in fact, no cause at all, only an arbitrary decision on the part of those who have the authority to decide. Yet nothing is less worth while than to speculate dizzily on the part women are going to play in any field from which they are at present debarred. They may be ready to burnish up "the rusty old social organism," and make it shine like new; but this is not the work which lies immediately at hand. A suffragist who believes that the world needs housecleaning has made the terrifying statement that when

English women enter the law courts they will sweep away all "legal frippery," all the "accumulated dust and rubbish of centuries." Latin terms, flowing gowns and wigs, silly staves and worn-out symbols, all must go, and with them must go the antiquated processes which confuse and retard justice. The women barristers of the future will scorn to have "legal natures like Portia's," basing their claims on quibbles and subterfuges. They will cut all Gordian knots. They will deal with naked simplicities.

References to Portia are a bit disquieting. Her law was stage law, good enough for the drama which has always enjoyed a jurisprudence of its own. We had best leave her out of any serious discussion. But why should the admission of women to the bar result in a volcanic upheaval? Women have practised medicine for years, and have not revolutionized it. Painstaking service, rather than any brilliant display of originality, has been their contribution to this field. It is reasonable to suppose that their advance will be resolute and beneficial. If they ever condescended to their profession, they do so no longer. If they ever talked about belonging to "the class of real people," they have relinquished such flowers of rhetoric. If they have earnestly desired the franchise, it was because they saw in it justice to themselves, not the torch which would enlighten the world.

It is conceded theoretically that woman's sphere is an elastic term, embracing any work she finds herself able to do,—not necessarily do well, because most of the world's work is done badly, but well enough to save herself from failure. Her advance is unduly heralded and unduly criticized. She is the target for too much comment from friend and foe. On the one hand, a keen

(but of course perverted) misogynist like Sir Andrew Macphail welcomes her entrance into public life because it will tend to disillusionment. If woman can be persuaded to reveal her elemental inconsistencies, man, freed in some measure from her charm—which is the charm of *retenue*—will no longer be subject to her rule. On the other hand, that most feminine of feminists, Miss Jane Addams, predicts that "the dullness which inheres in both domestic and social affairs when they are carried on by men alone will no longer be a necessary attribute of public life when gracious and gray-haired women become part of it."

If Sir Andrew is as acid as Schopenhauer, Miss Addams is early Victorian. Her point of view presupposes a condition of which we had not been even dimly aware. Granted that domesticity palls on the solitary male. Housekeeping seldom attracts him. The tea-table and the friendly cat fail to arrest his roving tendencies. Granted that some men are polite enough to say that they do not enjoy social events in which women take no part. They showed no disposition to relinquish such pastimes until the arid days of prohibition, and even now they cling forlornly to the ghost of a cheerful past. When they assert, however, that they would have a much better time if women were present, no one is wanton enough to contradict them. But public life! The arena in which whirling ambition sweeps human souls as an autumn wind sweeps leaves, which resounds with the shouts of the conquerors and the groans of the conquered, which is degraded by cupidity and ennobled by achievement—that this field of adventure, this heated race-track, needs to be relieved from dullness by the presence and participation of elderly ladies is the crowning vision of sensibility

"Qui veut faire l'ange fait la bête," said Pascal; and the Michigan angel is a danger signal. The sentimental and chivalrous attitude of American men reacts alarmingly when they are brought face to face with the actual terms and visible consequences of woman's enfranchisement. There exists a world-wide and age-long belief that what women want they get. They must want it hard enough and long enough to make their desire operative. It is the listless and preoccupied unconcern of their own sex which bars their progress. But men will fall into a flutter of admiration because a woman runs a successful dairy-farm, or becomes the mayor of a little town; and they will look aghast upon such commonplace headlines as these in their morning paper: "Women Confess Selling Votes"; "Chicago Women Arrested for Election Frauds";—as if there had not always been, and would not always be, a percentage of unscrupulous voters in every electorate. No sane woman believes that women, as a body, will vote more honestly than men; but no sane man believes that they will vote less honestly. They are neither the "gateway to hell," as Tertullian pointed out, nor the builders of Sir Rabindranath Tagore's "spiritual civilization." They are neither the repositories of wisdom nor the final word of folly.

It was unwise and unfair to turn a searchlight upon the first woman in Congress and exhibit to a gaping world her perfectly natural limitations. Such limitations are common in our legislative bodies and excite no particular comment. They are as inherent in the average man as in the average woman. They in no way affect the question of enfranchisement. Give as much and ask no more. Give no more and ask as much. This is the watchword of equality.

"God help women when they have only their rights!"

exclaimed a brilliant American lawyer; but it is in the "only" that all savor lies. Rights and privileges are incompatible. Emancipation implies the sacrifice of immunity, the acceptance of obligation. It heralds the reign of sober and disillusioning experience. Women, as M. Faguet reminds us, are only the equals of men, a truth which was simply phrased in the old Cornish adage, "Lads are as good as wenches when they are washed."

GEORGE MEREDITH[1]

Gilbert K. Chesterton

That Mr. Chesterton does not seem to have the purpose of the greater novelists—"to render things as they are and probe the mysteries of character in conflict with the circumstances of life" —cannot be viewed by all of us with complete regret. For if he had all that to do it is doubtful if even Mr. Chesterton could find time for the many other things that we should hate to trust to any hands but his.

Gilbert Keith Chesterton was born in London in the year 1874, and was educated at St. Paul's School. He has written novels, verse, essays, and at least one drama of worth. Nearly all of his work is journalistic or occasional in character, bristling, if not brilliant, with paradoxical, though often mechanical, witticism. One of the finest bits of swift, vigorous, stirring rhythm in modern poetry is the martial ballad, *Lepanto*. His play, *Magic*, is very clever conversation and, usually, good psychology, even if not as convincing of the supernatural as its author evidently intended it should be. *The Man Who Was Thursday* is the best known of his novels, though less close to reality than *Manalive*. His miscellaneous essays, especially those in *Orthodoxy*, *Heretics*, and *The Uses of Diversity*, are, after all, more interesting than his fiction. *The Victorian Age in Literature* is Mr. Chesterton's personal interpretation of what to him is a great and splendid era in the culture of mankind. It is a fascinating book. His book on Robert Browning is one of the few of any worth upon that poet's work, and his volume on Charles Dickens reveals Mr. Chesterton to be a critic who can get past the gross rattle of the foreground. He can discuss with clearness a question upon which men divide and shed light into corners so difficult and obscure that most people fail even to know they are there.

The death of George Meredith was the real end of the Nineteenth Century, not that empty date that came at the close of 1899. The last bond was broken between us and the pride and peace of the Victorian age. Our fathers were all dead. We were suddenly orphans; we

[1] Copyright, 1921, by Dodd, Mead and Company, and reprinted, by their permission, from *The Uses of Diversity*.

all felt strangely and sadly young. A cold, enormous dawn opened in front of us; we had to go on to tasks which our fathers, fine as they were, did not know, and our first sensation was that of cold and undefended youth. Swinburne was the penultimate, Meredith the ultimate end.

It is not a phrase to call him the last of the Victorians; he really is the last. No doubt this final phrase has been used about each of the great Victorians one after another from Matthew Arnold and Browning to Swinburne and Meredith. No doubt the public has grown a little tired of the positively last appearance of the Nineteenth Century. But the end of George Meredith really was the end of that great epoch. No great man now alive has its peculiar powers or its peculiar limits. Like all great epochs, like all great things, it is not easy to define. We can see it, touch it, smell it, eat it; but we cannot state it. It was a time when faith was firm without being definite. It was a time when we saw the necessity of reform without once seeing the possibility of revolution. It was a sort of exquisite interlude in the intellectual disputes: a beautiful, accidental truce in the eternal war of mankind. Things could mix in a mellow atmosphere. Its great men were so religious that they could do without a religion. They were so hopefully and happily republican that they could do without a republic. They are all dead and deified; and it is well with them. But we cannot get back into that well-poised pantheism and liberalism. We cannot be content to be merely broad; for us the dilemma sharpens and the ways divide.

Of the men left alive there are many who can be admired beyond expression; but none who can be admired in this way. The name of that powerful writer,

Mr. Thomas Hardy, was often mentioned in company with that of Meredith; but the coupling of the two names is a philosophical and chronological mistake. Mr. Hardy is wholly of our own generation, which is a very unpleasant thing to be. He is shrill and not mellow. He does not worship the unknown God; he knows the God (or thinks he knows the God), and dislikes Him. He is not a pantheist; he is a pandiabolist. The great agnostics of the Victorian age said there was no purpose in Nature. Mr. Hardy is a mystic; he says there is an evil purpose. All this is as far as possible from the plenitude and rational optimism of Meredith. And when we have disposed of Mr. Hardy, what other name is there that can even pretend to recall the heroic Victorian age? The Roman curse lies upon Meredith like a blessing: "Ultimus suorum moriatur"—he has died the last of his own.

The greatness of George Meredith exhibits the same paradox of difficulty as the greatness of Browning—the fact that simplicity was the center, while the utmost luxuriance and complexity was the expression. He was as human as Shakespeare, and also as affected as Shakespeare. It may generally be remarked (I do not know the cause of it) that the men who have an odd or mad point of view express it in plain or bald language. The men who have a genial and everyday point of view express it in ornate and complicated language. Swinburne and Thomas Hardy talk almost in words of one syllable; but the philosophical upshot can be expressed in the most famous of all words of one syllable—damn. Their words are common words; but their view (thank God) is not a common view. They denounce in the style of a spelling-book; while people like Meredith are unpopular through the very richness of their popular sympa-

thies. Men like Browning or like Francis Thompson praise God in such a way sometimes that God alone could possibly understand the praise. But they mean all men to understand it; they wish every beast and fish and flying thing to take part in the applauding chorus of the cosmos. On the other hand, those who have bad news to tell are much more explicit, and the poets whose object it is to depress the people take care that they do it. I will not write any more about those poets, because I do not profess to be impartial or even to be good-tempered on the subject. To my thinking, the oppression of the people is a terrible sin; but the depression of the people is a far worse one.

But the glory of George Meredith is that he combined subtlety with primal energy; he criticized life without losing his appetite for it. In him alone, being a man of the world did not mean being a man disgusted with the world. As a rule, there is no difference between the critic and ascetic except that the ascetic sorrows with a hope and the critic without a hope. But George Meredith loved straightness even when he praised it crookedly; he adored innocence even when he analyzed it tortuously; he cared only for unconsciousness, even when he was unduly conscious of it. He was never so good as he was about virgins and schoolboys. In one curious poem, containing many fine lines, he actually rebukes people for being quaint or eccentric, and rebukes them quaintly and eccentrically. He says of Nature, the great earth-mother, whom he worshiped:

> . . . She by one sure sign can read,
> Have they but held her laws and nature dear;
> They mouth no sentence of inverted wit.
> More prizes she her beasts than this high breed
> Wry in the shape she wastes her milk to rear.

That is the mark of the truly great man: that he sees the common man afar off, and worships him. The great man tries to be ordinary, and becomes extraordinary in the process. But the small man tries to be mysterious, and becomes lucid in an awful sense—for we can all see through him.

THE LURE OF KARTABO[1]

William Beebe

Mr. Beebe disclaims the rôle of man of letters and would rather be known as an ornithologist. He is in the line of succession of Thoreau, Burroughs, Muir, and Sharp, as well as that of Audubon and Alexander Wilson. His *Jungle Peace,* published in 1918, and *Edge of the Jungle,* in 1921, are contributions to American literature as well as to science. They are obviously personal in their point of view and are written with "unconscious power and unconscious grace." It is the personal treatment of the scientifically observed life of nature which captures the imagination of the reader of these remarkable books, even though their author's claim is to serve no other end but knowledge.

William Beebe was born in Brooklyn, New York, July 29, 1877. He was graduated from Columbia University in the class of 1898 with a degree of Bachelor of Science. The following year he spent at that university as a graduate student. In 1899 he was made an honorary curator of ornithology in the New York Zoölogical Museum. In addition he was director of the British Guiana Zoölogical Station, fellow of several scientific societies, active member of many others, and corresponding member of still others, both American and foreign. Between 1905 and 1921 he published eight books, all scientific in character, but all eminently readable. In addition to these volumes there are to his credit many scientific papers and monographs relating to birds and to evolution.

A HOUSE may be inherited, as when a wren rears its brood in turn within its own natal hollow; or one may build a new home such as is fashioned from year to year by gaunt and shadowy herons; or we may have it built to order, as do the drones of the wild jungle bees. In my case, I flitted like a hermit crab from one used shell to another. This little crustacean, living his oblique life in the shallows, changes doorways when his home becomes too small or hinders him in searching

[1] From *Edge of the Jungle,* by permission of the publishers, Henry Holt and Company.

for the things which he covets in life. The difference between our estates was that the hermit crab sought only for food, I chiefly for strange new facts—which was a distinction as trivial as that he achieved his desires sideways and on eight legs, while I traversed my environment usually forward and generally on two.

The word of finance went forth and demanded the felling of the second growth around Kalacoon, and for the second time the land was given over to cutlass and fire. But again there was a halting in the affairs of man, and the rubber saplings were not planted or were smothered; and again the jungle smiled patiently through a knee-tangle of thorns and blossoms, and the charred clumps of razor-grass sent forth skeins of saws and hanks of living barbs.

I stood beneath the familiar cashew trees, which had yielded for me so bountifully of their crops of blossoms and hummingbirds, of fruit and of tanagers, and looked out toward the distant jungle, which trembled through the expanse of palpitating heat-waves; and I knew how a hermit crab feels when its home pinches, or is out of gear with the world. And, too, Nupee was dead, and the jungle to the south seemed to call less strongly. So I wandered through the old house for the last time, sniffing the agreeable odor of aged hypo still permeating the dark room, re-covering the empty stains of skins and traces of maps on the walls, and re-filling in my mind the vacant shelves. The vampires had returned to their chosen roost, the martins still swept through the corridors, and as I went down the hill, a moriche oriole sent a silver shaft of song after me from the sentinel palm, just as he had greeted me four years ago.

Then I gathered about me all the strange and unnamable possessions of a tropical laboratory—and moved.

A wren reaches its home after hundreds of miles of fast aerial travel; a hermit crab achieves a new lease with a flip of his tail. Between these extremes, and in no less strange a fashion, I moved. A great barge pushed off from the Penal Settlement, piled high with my zoölogical Lares and Penates, and along each side squatted a line of paddlers—white-garbed burglars and murderers, forgers and fighters—while seated aloft on one of my ammunition trunks, with a microscopic case and a camera close under his watchful eye, sat Case, King of the Warders, the biggest, blackest, and kindest-hearted man in the world.

Three miles up river swept my moving-van; and from the distance I could hear the half-whisper—which was yet a roar—of Case as he admonished his children. "Mon," he would say to a shirking, shrinking coolie second-story man, "mon, do you t'ink dis the time to sleep? What toughts have you in your bosom, dat you delay de Proïessor's household?" And then a chanty would rise, the voice of the leader quavering with that wild rhythm which had come down to him, a vocal heritage, through centuries of tom-toms and generations of savages striving for emotional expression. But the words were laughable or pathetic. I was adjured to

"Blow de mon down with a bottle of rum,
Oh, de mon—mon—blow de mon down."

Or the jungle reëchoed the edifying reiteration of

"Sardines—and bread—OH!
Sardines—and bread,
Sardines—and bread—AND!
Sardines—and bread."

The thrill that a whole-lunged chanty gives is difficult to describe. It arouses some deep emotional response, as surely as a military band, or the reverberating cadence of an organ, or a suddenly remembered theme of opera.

As my aquatic van drew up to the sandy landing-beach, I looked at the motley array of paddlers, and my mind went back hundreds of years to the first Spanish crew which landed here, and I wondered whether these pirates of early days had any fewer sins to their credit than Case's convicts—and I doubted it.

Across my doorstep a line of leaf-cutting ants was passing, each bearing aloft a huge bit of green leaf, or a long yellow petal, or a halberd of a stamen. A shadow fell over the line, and I looked up to see an anthropomorphic enlargement of the ants—the convicts winding up the steep bank, each with cot, lamp, table, pitcher, trunk, or aquarium balanced on his head—all my possessions suspended between earth and sky by the neck-muscles of worthy sinners. The first thing to be brought in was a great war-bag packed to bursting, and Number 214, with eight more years to serve, let it slide down his shoulder with a grunt—the self-same sound that I have heard from a Tibetan woman carrier, and a Mexican peon, and a Japanese porter, all of whom had in past years toted this very bag.

I led the way up the steps, and there in the doorway was a tenant, one who had already taken possession, and who now faced me and the trailing line of convicts with that dignity, poise, and perfect self-possession which only a toad, a giant grandmother of a toad, can exhibit. I, and all the law-breakers who followed, recognized the nine tenths involved in this instance and carefully stepped around. When the heavy things began to arrive,

I approached diffidently, and half suggested, half directed her deliberate hops toward a safer corner. My feelings toward her were mingled, but altogether kindly, —as guest in her home, I could not but treat her with respect—while my scientific soul reveled in the addition of *Bufo guttatus* to the fauna of this part of British Guiana. Whether flashing gold of oriole, or the blinking solemnity of a great toad, it mattered little—Kartabo had welcomed me with as propitious an omen as had Kalacoon.

FREE TRADE VS. PROTECTION IN LITERATURE[1]

SAMUEL MCCHORD CROTHERS

Samuel McChord Crothers, since 1894 Unitarian clergyman at Cambridge, Massachusetts, and preacher to Harvard University, is one of the few living constructive critics of life and literature. Dr. Crothers was born at Oswego, Illinois, June 7, 1857. Wittenberg College, Princeton, Union Theological Seminary, and Harvard Divinity School supplied his education, and he has since received honorary degrees from several universities. As a clergyman he has had charge of churches in three western states and of two in New England. He is a contributor to various magazines, and since 1893 has been author of at least fifteen books, all of them revealing wisdom, ethical purpose, wit, humanity, and a distinctive style. His third volume, *The Gentle Reader,* instantly placed him in the forefront of living American essayists, and still stands as his best book. The knowledge, the humor, and the characteristic sanity of this book, together with its attractive style, will, no doubt, cause it to continue to be one of the most widely read groups of essays of the early twentieth century in America. An Essay on "How to Know the Fallacies" in a later volume, *The Pardoner's Wallet,* is a deliciously humorous and yet thoughtful analysis of the field of logic and argumentation suggested by its title. Dr. Crothers' books are an inspiration, a stimulus, and a guide to those who read them; and their readers are many. He stands apart from the momentary opposing tendencies of criticism to-day, and therefore is more likely to survive in influence than the majority of his belligerent critical contemporaries. Dr. Crothers writes in a leisurely, quiet manner, with the sure touch of the scholar, and the discriminating taste of the fine artist.

IN the old-fashioned text-book we used to be told that the branch of learning that was treated was at once an art and a science. Literature is much more than that. It is an art, a science, a profession, a trade, and an accident. The literature that is of lasting value is an accident. It is something that happens. After it has

[1] Reprinted by special permission of the author.

happened, the historical critics busy themselves in explaining it. But they are not able to predict the next stroke of genius.

Shelley defines poetry as the record of "the best and happiest moments of the best and happiest minds." When we are fortunate enough to happen in upon an author at one of these happy moments, then, as the country newspaper would say, "a very enjoyable time was had." After we have said all that can be said about art and craftsmanship, we put our hopes upon a happy chance. Literature cannot be standardized. We never know how the most painstaking work may turn out. The most that can be said of the literary life is what Sancho Panza said of the profession of knight-errantry: "There is something delightful in going about in expectation of accidents."

After a meeting in behalf of social justice, an eager, distraught young man met me in the streets of Boston and asked:

"You believe in the principle of equality?"

"Yes."

"Don't I then have just as much right to be a genius as Shakespeare had?"

"Yes."

"Then why ain't I?"

I had to confess that I didn't know.

It is with this chastened sense of our limitations that we meet for any organized attempt at the encouragement of literary productivity. Matthew Arnold's favorite bit of irreverence in which he seemed to find endless enjoyment was in twitting the unfortunate bishop who had said that "something ought to be done" for the Holy Trinity. It was a business-like proposition that involved a spiritual incongruity.

A confusion of values is likely to take place when we try to "do something" for American literature. It is an object that appeals to the uplifter who is anxious to "get results." But the difficulty is that if a piece of writing *is* literature, it does not need to be uplifted. If it is not literature, it is likely to be so heavy that you can't lift it. We have been told that a man by taking thought cannot add a cubit to his stature. It is certainly true that we cannot add many cubits to our literary stature. If we could we should all be giants.

When literary men discourse with one another about their art, they often seem to labor under a weight of responsibility which a friendly outsider would seek to lighten. They are under the impression that they have left undone many things which they ought to have done, and that the public blames them for their manifold transgressions.

That Great American Novel ought to have been written long ago. There ought to be more local color and less imitation of European models. There ought to have been more plain speaking to demonstrate that we are not squeamish and are not tied to the apron strings of Mrs. Grundy. There ought to be a literary center and those who are at it ought to live up to it.

In all this it is assumed that contemporary writers can control the literary situation.

Let me comfort the over-strained consciences of the members of the writing fraternity. Your responsibility is not nearly so great as you imagine.

Literature differs from the other arts in the relation in which the producer stands to the consumer. Literature can never be made one of the protected industries. In the drama the living actor has a complete monopoly. One might express a preference for Garrick or Booth,

but if he goes to the theater he must take what is set before him. The monopoly of the singer is not quite so complete as it once was. But until canned music is improved, most people will prefer to get theirs fresh. In painting and in sculpture there is more or less competition with the work of other ages. Yet even here there is a measure of natural protection. The old masters may be admired, but they are expensive. The living artist can control a certain market of his own.

There is also a great opportunity for the artist and his friends to exert pressure. When you go to an exhibition of new paintings, you are not a free agent. You are aware that the artist or his friends may be in the vicinity to observe how First Citizen and Second Citizen enjoy the masterpiece. Conscious of this espionage, you endeavor to look pleased. You observe a picture which outrages your ideas of the possible. You mildly remark to a bystander that you have never seen anything like that before.

"Probably not," he replies, "it is not a picture of any outward scene; it represents the artist's state of mind."

"Oh," you reply, "I understand. He is making an exhibition of himself."

It is all so personal that you do not feel like carrying the investigation further. You take what is set before you and ask no questions.

But with a book the relation to the producer is altogether different. You go into your library and shut the door, and you have the same sense of intellectual freedom that you have when you go into the polling booth and mark your Australian ballot. You are a sovereign citizen. Nobody can know what you are reading unless you choose to tell. You snap your fingers at the critics.

In the "tumultuous privacy" of print you enjoy what you find enjoyable, and let the rest go.

Your mind is a free port. There are no customs house officers to examine the cargoes that are unladen. The book which has just come from the press has no advantage over the book that is a century old. In the matter of legibility the old volume may be preferable, and its price is less. Whatever choice you make is in the face of the free competition of all the ages. Literature is the timeless art.

Clever writers who start fashions in the literary world should take account of this secrecy of the reader's position. It is easy enough to start a fashion; the difficulty is to get people to follow it. Few people will follow a fashion except when other people are looking at them. When they are alone they relapse into something which they enjoy and which they find comfortable.

The ultimate consumer of literature is therefore inclined to take a philosophical view of the contentions among literary people about what seem to them the violent fluctuations of taste. These fashions come and go, but the quiet reader is undisturbed. There are enough good books already printed to last his life-time. Aware of this, he is not alarmed by the cries of the "calamity howlers" who predict a famine.

From a purely commercial viewpoint, this competition with writers of all generations is disconcerting. But I do not see that anything can be done to prevent it. The principle of protection fails. Trades-unionism offers no remedy. What if all the living authors should join in a general strike! We tremble to think of the army of strike-breakers that would rush in from all centuries.

From the literary viewpoint, however, this free com-

petition is very stimulating and even exciting. To hold our own under free trade conditions, we must not put all our thought on increasing the output. In order to meet the free competition to which we are exposed, we must improve the quality of our work. Perhaps that may be good for us.

MARY WHITE[1]

William Allen White

Eloquent in its simplicity, sincere in its tone, true in its characterization, and purposeful in its effect, this sketch written by William Allen White on the day of his daughter's burial and printed in the *Emporia Gazette* the following day thoroughly reveals his outstanding characteristics as a writer and a man. Those characteristics have made the editor of a small town newspaper a national, if not an international, figure both in letters and in politics. Mr. White, born in Emporia, a Kansas town of ten thousand, educated at the University of Kansas, found in his Middle West environment inspiration and material for sketches, short stories, and novels that have caused his literary power to be widely recognized. *The Court of Boyville,* with its illuminating episodes of small town life, the forceful *A Certain Rich Man,* deemed one of the best of America's novels, *In Our Town,* with its relevation of human nature, together with *The Real Issues and Other Stories, Stratagem and Spoils, The Old Order Changeth, God's Puppets,* and *In the Heart of a Fool* reveal his ability to deal convincingly with homely material.

He does not confine his attention entirely to those things near to him. Events and men of national and international import are viewed by him with such a clearness of vision and discussed with such an independent courage, yet withal in a fine spirit of fairness and tolerance, that his opinions are valued throughout the nation and have brought him distinguished honors, not the least of which was appointment as a representative of the United States at the Russian Conference at Prinkipos in 1919.

Though honors have come to him, he remains as thoroughly a resident of Emporia as any of its citizens, a man among his neighbors, loyal, sympathetic, human, friendly.

The Associated Press reports carrying the news of Mary White's death declared that it came as the result of a fall from a horse. How she would have hooted at that! She never fell from a horse in her life. Horses have fallen on her and with her—"I'm always trying to hold

[1] Published in the Emporia *Gazette.* Reprinted through the courtesy of the editor, William Allen White.

'em in my lap," she used to say. But she was proud of few things, and one was that she could ride anything that had four legs and hair. Her death resulted not from a fall, but from a blow on the head which fractured her skull, and the blow came from the limb of an overhanging tree on the parking.

The last hour of her life was typical of its happiness. She came home from a day's work at school, topped off by a hard grind with the copy on the High School Annual, and felt that a ride would refresh her. She climbed into her khakis, chattering to her mother about the work she was doing, and hurried to get her horse and be out on the dirt roads for the country air and the radiant green fields of the spring. As she rode through the town on an easy gallop she kept waving at passers-by. She knew every one in town. For a decade the little figure with the long pig-tail and the red hair ribbon has been familiar on the streets of Emporia, and she got in the way of speaking to those who nodded at her. She passed the Kerrs, walking the horse, in front of the Normal Library, and waved at them; passed another friend a few hundred feet further on, and waved at her. The horse was walking and as she turned into North Merchant Street she took off her cowboy hat, and the horse swung into a lope. She passed the Tripletts and waved her cowboy hat at them, still moving gaily north on Merchant Street. A *Gazette* carrier passed—a high-school boy friend—and she waved at him, but with her bridle hand; the horse veered quickly, plunged into the parking where the low-hanging limb faced her, and, while she still looked back waving, the blow came. But she did not fall from the horse; she slipped off, dazed a bit, staggered, and fell in a faint. She never quite recovered consciousness.

But she did not fall from the horse, neither was she riding fast. A year or so ago she used to go like the wind. But that habit was broken, and she used the horse to get into the open to get fresh, hard exercise, and to work off a certain surplus energy that welled up in her and needed a physical outlet. That need has been in her heart for years. It was back of the impulse that kept the dauntless, little brown-clad figure on the streets and country roads of this community and built into a strong, muscular body what had been a frail and sickly frame during the first years of her life. But the riding gave her more than a body. It released a gay and hardy soul. She was the happiest thing in the world. And she was happy because she was enlarging her horizon. She came to know all sorts and conditions of men. Charley O'Brien, the traffic cop, was one of her best friends. W. L. Holtz, the Latin teacher, was another. Tom O'Connor, farmer-politician, and Rev. J. H. J. Rice, preacher and police judge, and Frank Beach, music master, were her special friends, and all the girls, black and white, above the track and below the track, in Pepville and Stringtown, were among her acquaintances. And she brought home riotous stories of her adventures. She loved to rollick; persiflage was her natural expression at home. Her humor was a continual bubble of joy. She seemed to think in hyperbole and metaphor. She was mischievous without malice, as full of faults as an old shoe. No angel was Mary White, but an easy girl to live with, for she never nursed a grouch five minutes in her life.

With all her eagerness for the out-of-doors, she loved books. On her table when she left her room were a book by Conrad, one by Galsworthy, *Creative Chemistry* by E. E. Slosson, and a Kipling book. She read Mark

Twain, Dickens, and Kipling before she was ten—all of their writings. Wells and Arnold Bennett particularly amused and diverted her. She was entered as a student in Wellesley in 1922; was assistant editor of the High School Annual this year, and in line for election to the editorship of the Annual next year. She was a member of the executive committee of the High School Y. W. C. A.

Within the last two years she had begun to be moved by an ambition to draw. She began as most children do by scribbling in her school books, funny pictures. She bought cartoon magazines and took a course—rather casually, naturally, for she was, after all, a child, with no strong purposes—and this year she tasted the first fruits of success by having her pictures accepted by the High School Annual. But the thrill of delight she got when Mr. Ecord, of the Normal Annual, asked her to do the cartooning for that book this spring was too beautiful for words. She fell to her work with all her enthusiastic heart. Her drawings were accepted, and her pride —always repressed by a lively sense of the ridiculousness of the figure she was cutting—was a really gorgeous thing to see. No successful artist ever drank a deeper draught of satisfaction than she took from the little fame her work was getting among her schoolfellows. In her glory, she almost forgot her horse—but never her car.

For she used the car as a jitney bus. It was her social life. She never had a "party" in all her nearly seventeen years—wouldn't have one; but she never drove a block in the car in her life that she didn't begin to fill the car with pick-ups! Everybody rode with Mary White—white and black, old and young, rich and poor, men and women. She liked nothing better than to fill the car

full of long-legged high-school boys and an occasional girl, and parade the town. She never had a "date," nor went to a dance, except once with her brother, Bill, and the "boy proposition" didn't interest her—yet. But young people—great, spring-breaking, varnish-cracking, fender-bending, door-sagging carloads of "kids"—gave her great pleasure. Her zests were keen. But the most fun she ever had in her life was acting as chairman of the committee that got up the big turkey dinner for the poor folks at the county home; scores of pies, gallons of slaw, jam, cakes, preserves, oranges, and a wilderness of turkey were loaded in the car and taken to the county home. And, being of a practical turn of mind, she risked her own Christmas dinner by staying to see that the poor folks actually got it all. Not that she was a cynic; she just disliked to tempt folks. While there she found a blind colored uncle, very old, who could do nothing but make rag rugs, and she rustled up from her school friends rags enough to keep him busy for a season. The last engagement she tried to make was to take the guests at the county home out for a car ride. And the last endeavor of her life was to try to get a rest room for colored girls in the high school. She found one girl reading in the toilet, because there was no better place for a colored girl to loaf, and it inflamed her sense of injustice and she became a nagging harpy to those who she thought could remedy the evil.

The poor she had always with her, and was glad of it. She hungered and thirsted for righteousness; and was the most impious creature in the world. She joined the Congregational Church without consulting her parents; not particularly for her soul's good. She never had a thrill of piety in her life, and would have hooted at a "testimony." But even as a little child she felt the

church was an agency for helping people to more of life's abundance, and she wanted to help. She never wanted help for herself. Clothes meant little to her. It was a fight to get a new rig on her; but eventually a harder fight to get it off. She never wore a jewel and had no ring but her high-school class ring, and never asked for anything but a wrist watch. She refused to have her hair up, though she was nearly seventeen. "Mother," she protested, "you don't know how much I get by with, in my braided pigtails, that I could not with my hair up." Above every other passion of her life was her passion not to grow up, to be a child. The tom-boy in her, which was big, seemed to loathe to be put away forever in skirts. She was a Peter Pan, who refused to grow up.

Her funeral yesterday at the Congregational Church was as she would have wished it; no singing, no flowers save the big bunch of red roses from her Brother Bill's Harvard classmen—Heavens, how proud that would have made her! and the red roses from the *Gazette* force—in vases at her head and feet. A short prayer, Paul's beautiful essay on "Love," from the thirteenth chapter of First Corinthians, some remarks about her democratic spirit by her friend, John H. J. Rice, pastor and police judge, which she would have deprecated if she could, a prayer sent down for her by her friend, Carl Nau, and opening the service the slow, poignant movement from Beethoven's Moonlight Sonata, which she loved, and closing the service a cutting from the joyously melancholy first movement of Tschaikowski's *Symphonie Pathétique,* which she liked to hear in certain moods on the phonograph; then the Lord's Prayer by her friends in the high school.

That was all.

For her pallbearers only her friends were chosen:

her Latin teacher, W. L. Holtz; her high-school principal, Rice Brown; her doctor, Frank Foncannon; her friend, W. W. Finney; her pal at the *Gazette* office, Walter Hughes; and her brother Bill. It would have made her smile to know that her friend, Charley O'Brien, the traffic cop, had been transferred from Sixth and Commercial to the corner near the church to direct her friends who came to bid her good-by.

A rift in the clouds in a gray day threw a shaft of sunlight upon her coffin as her nervous, energetic little body sank to its last sleep. But the soul of her, the glowing, gorgeous, fervent soul of her, surely was flaming in eager joy upon some other dawn.

TO AN ANXIOUS FRIEND[1]

William Allen White

You tell me that law is above freedom of utterance. And I reply that you can have no wise laws nor free enforcement of wise laws unless there is free expression of the wisdom of the people—and, alas, their folly with it. But if there is freedom, folly will die of its own poison, and the wisdom will survive. That is the history of the race. It is the proof of man's kinship with God. You say that freedom of utterance is not for time of stress, and I reply with the sad truth that only in time of stress is freedom of utterance in danger. No one

[1] An editorial printed in the Emporia *Gazette* addressed to Governor Henry Allen of Kansas. Reprinted through the courtesy of William Allen White.

The Pulitzer prize of $500 is awarded annually to the writer who, in the judgment of the awarding committee, is responsible for the best editorial article, "the test of excellence being clearness of style, moral purpose, sound reasoning, and power to influence public opinion in the right direction." It seems but fitting that this prize should be awarded to a man who became a national figure almost overnight as the result of an editorial he wrote and published in his own newspaper, the *Emporia Gazette*. "What's the Matter with Kansas?" is still regarded as a classic in the field of editorial literature. At the time it was first published it was printed in newspapers and magazines throughout the country, and from that day the *Emporia Gazette* became almost as widely quoted as the *New York Times*.

"To an Anxious Friend" reveals the passion of its author for freedom of expression and stands as a tremendously powerful argument for freedom of the press. To those who know its background it reveals as well the splendid spirit of a man willing to take up arms for a cause he deems righteous even against a man with whom he enjoys a Damon and Pythias friendship. Henry J. Allen was not only a fellow Kansas editor of William Allen White, but they had stood shoulder to shoulder in many a political

questions it in calm days, because it is not needed. And the reverse is true also; only when free utterance is suppressed is it needed, and when it is needed, it is most vital to justice. Peace is good. But if you are interested in peace through force and without free discussion, that is to say, free utterance decently and in order —your interest in justice is slight. And peace without justice is tyranny, no matter how you may sugar-coat it with expediency. This state today is in more danger from suppression than from violence, because in the end, suppression leads to violence. Violence, indeed, is the child of suppression. Whoever pleads for justice helps to keep the peace; and whoever tramples upon the plea for justice, temperately made in the name of peace, only outrages peace and kills something fine in the heart of man which God put there when we got our manhood. When that is killed, brute meets brute on each side of the line.

battle both in the state and in the nation; they had served together in the Red Cross overseas, their experiences being reviewed in Mr. White's *The Martial Adventures of Henry and Me,* one of the most human and illuminating commentaries on the World War; for years they had built up a thoroughgoing personal affection for each other. When Henry J. Allen became governor of Kansas he centered his interest in the Industrial Court Law, which he felt would put a stop to the distress caused by strikes, in a way that would not be unfair to capital or to labor. William Allen White supported the outstanding principle of the law, but when under the law Governor Allen attempted to prohibit the strikers and the employers from presenting their sides in the argument to the public, his friend protested in print and by permitting the strikers to put in the office window of the *Emporia Gazette* a card stating their position. When Mr. White was arrested, by direction of the governor, he declared himself willing to serve a sentence in jail rather than retreat from his position. The editorial "To an Anxious Friend" was published July 27, 1922, after his arrest. The facts that the case against William Allen White was dropped and that later the law was repealed are not important. The situation had given occasion for an exposition and a defense of freedom of expression that may live as long as a literature of democracy lives.

So, dear friend, put fear out of your heart. This nation will survive, this state will prosper, the orderly business of life will go forward if only men can speak in whatever way given them to utter what their hearts hold—by voice, by postal card, by letter, or by press. Reason never has failed men. Only force and repression have made the wrecks in the world.
